CONTENTS

PREFACE	13
INTRODUCTION	15

Chapter 1

THE FINE STRUCTURE OF THE MAMMALIAN ARTERIAL WALL	17
by A. Bálint	
The structural effect of vascular preservation	17
Components of the normal arterial wall	17
General structure	17
Tunica intima	17
Aorta	18
Coronary arteries	19
Large and medium size arteries	20
Small arteries	20
Capillaries	20
Tunica media	21
Elastic arteries	21
Muscular-type vessels	21
Hybrid vessels	21
Tunica adventitia	21
Vasa vasorum	22
Lymph vessels	22
Cytology	23
Endothelium	23
Smooth muscle cell	24
Fibroblast	25

Chapter 2

AORTIC RESPONSE TO VARIOUS EFFECTS	26
Introduction	26
Development and structure of regenerative IP	27
Course of aortic regeneration	27
by B. Veress, Anna Kádár	
Analysis of the cellular components of IP	29
by B. Veress, Anna Kádár	
Ultrastructure of the lining cells of IP	29

Origin of endothelial cells of IP	30
Structure of cell components of the proliferate	31
Origin of smooth muscle cells	32
The intercellular substance of IP	33
by Anna Kádár, B. Veress	
Elastic fibre genesis in embryonic vessels	37
by Anna Kádár, B. Veress	
Examinations by digestion with elastase	39
Function of smooth muscle cells and their role in fibrillogenesis	42
by Anna Kádár, B. Veress	
Structure of inactivity (involutional) proliferation of the intima	43
by B. Veress, Anna Kádár	
Intimal proliferation in transplanted grafts (neo-intima)	45
by B. Veress, Anna Kádár	
Development and structure of the neo-intima	45
Origin of cell components of neo-intima	46
Degenerative changes in transplantational IP	47
Changes of large vessels in experimental hypertension	48
by B. Veress, I. Hüttner	
Survey of the literature	48
Morphology of large vessel changes in experimental malignant hypertension	49
Characteristics of hypertensive reparative IP	52

Chapter 3

DEVELOPMENT AND ULTRASTRUCTURE OF ARTERIOSCLEROTIC

LESIONS	54
by B. Veress	
Introduction	54
Ultrastructure of arteriosclerotic lesions	55
Structure of the pre-atheroma	56
Endothelial cell row	57
Subendothelium	58
The arteriosclerotic plaque	60
Structure of the atheroma	60
Structure and origin of the foam cells	60
Source of lipids localizing in the atheroma	62
Structure of the fibrous plaque	63
Comparison of aortic responses	63

Chapter 4

STUDIES OF LARGE MUSCULAR VESSELS

by Klára Szemenyei

Chapter 5

MORPHOLOGICAL CHANGES OF SMALL MUSCULAR-TYPE VESSELS AND ARTERIOLES UNDER THE INFLUENCE OF VARIOUS INJURIES.....

by T. Kerényi, I. Hüttner

Lesions of muscular-type small vessels in acute experimental hypertension	68
---	----

Acute hypertensive lesions of small vessels as a model of vascular damage . . .	68
Acute hypertensive lesion of the intima	69
Development, forms and components of the vascular fibrinoid	70
Acute hypertensive damage of smooth muscle cells of the media	71

Chapter 6

EXPERIMENTAL OBSERVATIONS	73
Investigations by light microscopy	73
Mechanism of development of the subendothelial fibrinoid	74
Electron-microscopic structure and fibrin formations of the subendothelial fibrinoid	74
Electron-microscopic study of the media fibrinoid and of necrotic muscle cell changes	76
Localization of acute hypertensive damage in small vessels	77
Histochemistry of acute vascular lesions	77
Histochemical examinations for protein, carbohydrate and lipid	77
Enzyme histochemical studies	78
Acid mucopolysaccharide (AMP) synthesis in experimental hypertension of muscular-type small arteries	80
by Éva Konyár	
Morphological changes of small vessels after painting with acid	82
by Klára Szemenyei, I. Hüttner	
Noradrenalin-induced lesions of muscular-type small vessels	84
by T. Kerényi	
Small vessel changes on hypersensitization	86
by Éva Konyár	

Chapter 7

CHRONIC LESIONS OF SMALL VESSELS (VASCULAR WALL TRANSFORMA- TION FOLLOWING ACUTE LESIONS OF SMALL VESSELS)	91
Chronic small vessel changes after hypertension	91
by T. Kerényi, I. Hüttner	
Chronic proliferative reactions of vessels damaged by a single trauma or by an acute hypertensive crisis	92
Small vessel hyalinization after an acute hypertensive crisis or other singular damage	94
Proliferative vascular lesions in chronic benign hypertension	95
Hyaline vascular changes in chronic benign hypertension	98
Hypoxic vascular changes	99
Chronic transformation of vascular lesions induced by painting with acid, noradrenalin administration or sensitization with horse serum	100

Chapter 8

INFLUENCE OF DRUG THERAPY ON SMALL VESSEL CHANGES IN EXPERIMENTAL HYPERTENSION. PROBLEMS OF HEALING AND RE- VERSIBILITY	103
by Éva Konyár	

Chapter 9

CONCLUSIONS FROM AVAILABLE EXPERIMENTAL DATA ON THE ROLE OF VASCULAR STRUCTURE IN THE MORPHOLOGY OF VASCULAR LESIONS	107
---	------------

Chapter 10

PROBLEMS OF TRANSPORT ACROSS THE VESSEL WALL	110
by Z. Nagy	
Introduction	110
Methods of tracing the transmural passage of material. Colloidal tracers	111
Factors responsible for intramural transport	114
Factors controlling permeability	114
Transcellular permeability	114
Enzymatic phenomena accompanying endothelial permeability	115
Intercellular (gap-junction) transport	116
Extracellular amorphous substances. External coat, basement membrane	117
External coat	117
Basement membrane	117
Ground substance	118
Components controlling transmural flow	118
Ground substance	118
Transport-controlling function of elastic elements	120
Smooth muscle cells	120
Factors responsible for drainage of plasma substances	121
Increase of permeability in association with lymph stasis	121
Intramural diffusion of various plasma substances	123
Serum proteins, lipids, lipoprotein and ions	123
Effects of abnormal accumulation of vasoactive amines and hormones	
and of hypoxia and pH-changes on permeability	126
Pressure and flow factors	128
Effect of hypertension on transport across the vessel wall	128
by I. Hüttner	
Hypertensive disturbances of transmural flow in small arteries	128
Post-hypertensive permeability disturbance of aorta	130
Tracer studies	131
Peroxidase experiments	131
Ferritin experiments	131
Colloidal carbon experiments	132
Arteriosclerosis and mural transport	134
Role of permeability in atherogenesis	134
Role of lymph circulation in experimental arteriosclerosis of the rat	136

Chapter 11

STUDIES ON HUMAN VASCULAR DISEASES WITH REGARD TO OBSERVATIONS IN MODEL EXPERIMENTS	138
Evaluation of acute small vessel lesions	138

Chronic lesions of small vessels	140
Correlation of human large vessel lesions with similar changes in experimental animals	142
 <i>Appendix</i>	
DESCRIPTION OF SURGICAL METHODS AND FIXING AND STAINING TECHNIQUES FREQUENTLY REFERRED TO IN THIS BOOK	149
PUBLICATIONS BY THE EDITOR AND HIS TEAM	155
GENERAL BIBLIOGRAPHY	160
PLATES	201
