Preface

The principles of fluorescence spectroscopy are by now well established, and, after a rather lengthy gestation period, the technique is now routinely applied to a broad spectrum of problems, ranging from mechanistic photochemistry to chemical analyses in biomedical and environmental systems to probes of structure and function in biological macromolecules. Phosphorescence spectrometry and chemiluminescence are also well-known techniques; they are somewhat less well established than fluorescence (at least in analytical chemistry), but they too are receiving greatly increased application to both laboratory and “real” problems.

This is not to imply that luminescence spectroscopy, viewed in its broadest sense, is a static field. In fact, recent advances in instrumentation make it feasible to apply fluorescence to problem areas in which its use five years ago would have been unthinkable. Advances in hardware generate advances in application, and very significant progress is being recorded in the application of fluorescence (and its close relatives, phosphorescence and chemiluminescence) in the biochemical, biomedical, and environmental spheres.

The purpose of this book is to survey some of the more important recent developments in fluorescence *instrumentation* and in the *applications* of fluorescence methods to problems of broad interest. Some chapters (largely in Volume 1) deal primarily with advances in technique; others (largely in Volume 2) pertain principally to new applications; many of the chapters are intimately concerned with progress in *both* methodology and utilization. The book is *not* intended to serve as a comprehensive textbook of fluorescence. Indeed, for many of the chapters in this book, acquaintance with (or reference to) one of the “standard texts,” such as Parker’s *Photoluminescence of Solutions* (American Elsevier, New York, 1968), Guilbault’s *Practical Fluorescence* (Marcel Dekker, New York, 1973), or Winefordner, Schulman, and O’Haver’s *Luminescence Spectroscopy in Analytical Chemistry*

(John Wiley, New York, 1972), will be helpful and perhaps even necessary. Our objective has been to present a series of chapters, written by recognized experts, describing in detail recent advances in the methodology or applications of fluorescence which have not been discussed in the standard texts.

It is probably accurate to assert, as a rough generalization, that progress in the development of new fluorescence instrumentation has often occurred in laboratories and settings different from those in which genuine advances in the uses of fluorescence have taken place. Of course, such a generalization has very many obvious exceptions, a number of which are clearly represented in this book, but in general it seems safe to conclude that the both “developers” and the “users” in modern fluorescence spectroscopy have suffered from inefficient cross-communication. It is hoped that this book will help in a significant way to alleviate this continuing problem.

Within this context, the authors of the individual chapters have been encouraged to write self-contained treatments of their topics requiring a minimum of cross-referencing to other chapters. The authors have been urged to assume a basic minimum background knowledge in the acquisition and use of luminescence data. They have also been encouraged to speculate upon future developments in fluorescence hardware and on future applications of the newer techniques. Overall, then, we hope that this book, considered as an entity, will provide a useful overview of where fluorescence spectroscopy now is and where it is headed in the future.

I am deeply indebted to each one of the chapter contributors; it has been a great pleasure for me to have had the opportunity to work with such an exceptionally cooperative and knowledgeable group of scientists. Whatever merit this book may have can be attributed to the quality of their research efforts and their ability to convey both the spirit and the technical minutiae of this research to the reader.

Contents of Volume 1

Contents of Volume 2	xv
-----------------------------------	----

Chapter 1

Fluorescence Spectroscopy with On-Line Computers: Methods and Instrumentation

John E. Wampler

A. Introduction	1
1. Computerization in Fluorescence Spectroscopy	3
2. Practical Considerations	4
a. Terminology and Hardware	4
b. Components External to the Interface	7
3. Criteria for Selection of Components	8
a. The Computer	10
b. Selection of Interface Components	11
4. Computer Programming (Software)	12
5. A Systems Approach to the Design of On-Line Instrument Systems	16
B. A Simple On-Line Data-Acquisition and Control System	17
1. The Hardware System	20
2. The Software System	24
C. Integrated-Computerized Instrument Systems for Fluorescence Spectroscopy	25
1. Fluorescence Emission and Excitation Spectra	27
2. Polarization of Fluorescence	32
3. Fluorescence Lifetime Measurements	35
D. Glossary	40
References	42

Chapter 2

Digital and Analog Measurements in Fluorescence Spectroscopy

J. M. Fitzgerald

A. Introduction	45
B. Definitions and Nomenclature	46
1. Analog and Digital Domains	46
2. Suitability of Digital and Analog Presentations for Fluorescence Measurements	47
C. Comparison of Electronic Methodology in Two Modern Spectrofluorometers	50
1. Introduction	50
2. A Computer-Centered Spectrofluorometer	50
3. An Analog-Compensated Spectrofluorometer	52
D. Photon Counting and Lock-in Amplification	53
1. Introduction	53
2. Principles of Photon Counting	53
3. Principles of Phase-Sensitive Detection	55
4. Practical Results Comparing Photon Counting with Lock-in Amplification	56
E. Principles and Applications of Digital Integration	56
1. Digital Integration of Fluorescence Signals	56
2. Application in Case of Photodecomposition	57
3. Digital ATP Photometers for Biological Measurements ...	59
F. Other Electronic Techniques for Fluorometry	60
1. Source Intensity Correction	60
2. Wavelength Encoding	61
3. Transient Fluorescence Measurements	61
4. Future Electronic Impacts on Luminescence Measurements	62
References	63

Chapter 3

Modulation and Derivative Techniques in Luminescence Spectroscopy: Approaches to Increased Analytical Selectivity

Thomas C. O'Haver

A. Introduction	65
B. Derivative Techniques in Luminescence Spectrometry	66

C. Wavelength-Modulation Techniques in Luminescence Spectrometry	74
D. Conclusion	80
References	81

Chapter 4

Dye Lasers: Fundamentals and Analytical Applications

Howard W. Latz

A. Introduction	83
1. Historical Background	83
2. Fundamentals	85
a. General Aspects of Lasers	85
b. Dye Lasers	87
c. Wavelength Tuning	90
B. Instrumentation	92
1. Components	93
a. Excitation Sources	93
b. Optics	95
c. Detection Methods	97
2. Laser-Active Compounds	98
3. Commercial Units	99
C. Analytical Applications	104
1. Dye Lasers as Sources	104
a. Atomic and Molecular Absorption	105
b. Intracavity Quenching of Dye Lasers	105
c. Atomic and Molecular Luminescence	111
2. Laser Fluorescence as a Signal	115
D. Conclusion	116
References	117

Chapter 5

Laser-Excited Fluorescence Techniques in Air Pollution Monitoring

Milton Birnbaum

A. Introduction	121
B. Measurement of Atmospheric NO ₂ Levels	123

1.	Spectroscopic Properties of NO ₂	123
2.	Laser NO ₂ Monitor	128
3.	Modifications for Monitoring NO	131
4.	Improved Laser NO ₂ Monitor (442 nm Excitation)	132
C.	Fluorescence of Atmospheric Aerosols	136
1.	Method of Monitoring Aerosol Fluorescence	137
2.	Fluorescence Detection of Pollutants in the Presence of Aerosols and NO ₂	140
3.	Discrimination against Broadband Interference by a Two- Wavelength Method	140
4.	Fluorescence Identification of Aerosols	141
D.	Fluorescence Determination of SO ₂	143
1.	Spectroscopic Properties of SO ₂ : Absorption, Fluorescence, and Quenching of Fluorescence	144
2.	Prototype System for Determination of Ambient SO ₂	145
3.	Fluorescence Detection of Nitric Oxide	147
E.	Assessment of the Fluorescence Method	147
1.	Comparison of Laser versus Lamp Excitation	148
2.	Calculated Detectability of a Laser SO ₂ Monitor	148
3.	Remote Sensing of Atmospheric Pollutants by Fluorescence	150
4.	Fluorescence Measurement of Atmospheric Hydroxyl Radical Concentrations	150
F.	Application of Novel Laser Techniques	151
1.	Tunable and Pulsed Lasers	151
2.	Mode-Locked Lasers	153
G.	Conclusions and Future Projections	154
	References	155

Chapter 6

Chemiluminescence Techniques in Air Pollutant Monitoring

Arthur Fontijn

A.	Introduction	159
B.	Monitors in Present Use	161
1.	Types of Monitors and Their Applications	161
a.	Compound-Specific Detectors	162
b.	Element-Specific Detectors	164

2.	Compound-Specific Monitors Based on the Reaction $\text{NO} + \text{O}_3 \rightarrow \text{NO}_2 + \text{O}_2 + h\nu$	167
a.	NO and O_3	167
b.	NO_2 , NO_x ($= \text{NO} + \text{NO}_2$).....	171
c.	NH_3 and Amines	173
d.	Multifunctional Monitors and Monitor Calibration ...	174
3.	O_3 Monitors Based on Other Reactions.....	178
a.	Homogeneous Chemiluminescence	178
b.	Heterogeneous Chemiluminescence.....	180
C.	Compound-Specific Monitoring Methods in Development or under Consideration.....	180
1.	Application of the Reaction $\text{O} + \text{NO} \rightarrow \text{NO}_2 + h\nu$	180
a.	NO_x	181
b.	NO_2 by the Photofragment Technique	182
2.	NO_2 by an O_3 Chemiluminescence-Based Photofragment Technique	184
3.	Application of Other Reactions.....	184
a.	Reactive Hydrocarbons.....	184
b.	SO_2	186
c.	PAN	188
D.	Conclusion	188
	Appendix: Pertinent Rate Coefficients	189
	References	189

Chapter 7

Chemiluminescence Analysis in Water Pollution Studies

W. Rudolf Seitz

A.	Introduction	193
B.	ATP Analysis	196
C.	Iron(II) Analysis	200
D.	Phosphorus Analysis	203
E.	Future Developments in Chemiluminescence Analysis.....	206
1.	Liquid-Phase CL	206
a.	Coupling Enzyme Reactions to CL	206
b.	Chemical Excitation of Fluorescence.....	207
c.	Coupling of CL to Separation Methods	207

2. Flame CL	208
References	208
 Chapter 8	
Internal-Reflection Techniques in Fluorescence Spectroscopy	
N. J. Harrick and G. I. Loeb	
A. Introduction	211
B. Single-Internal-Reflection Studies	211
C. Multiple-Internal-Reflection Fluorescence (MIRF).....	212
D. Optical Materials and Geometries for Internal-Reflection Elements (IRE)	216
E. MIRF with a Commercial Spectrophotofluorometer	217
References	224

Subject Index	233

Contents of Volume 2

Chapter 1

Applications of Centrifugal Fast Analyzers to Fluorescence and Chemiluminescence Analyses

Thomas O. Tiffany

Chapter 2

Applications of Luminescence Spectroscopy to Quantitative Analyses in Clinical and Biological Samples

Peter Froehlich

Chapter 3

Fluorescent Probing of Dynamic and Molecular Organization of Biological Membranes

R. A. Badley

Chapter 4

The Application of Fluorescence Techniques to the Study of Micellar Systems

M. Grätzel and J. K. Thomas

Chapter 5

Fluorescent Probe Studies of Binding Sites in Proteins and Enzymes

Jorge E. Churchich

Chapter 6

Acid–Base Chemistry of Excited Singlet States: Fundamentals and Analytical Implications

Stephen G. Schulman

Chapter 7

Use of Fluorescence to Study Structural Changes and Solvation Phenomena in Electronically Excited Molecules

T. C. Werner

Chapter 8

The Study of Excited State Complexes (“Exciplexes”) by Fluorescence Spectroscopy

Peter Froehlich and E. L. Wehry
