Preface

As sessile organisms, plants have evolved elaborate mechanisms to perceive and respond to a myriad of environmental cues, thereby increasing their chances of reproduction and survival. Their extraordinary phenotypic plasticity allows them to grow towards or away from stimuli, orchestrate their metabolism according to 24-h light–dark cycles, endure extremely harsh climatic and soil conditions, or defend themselves against pathogenic agents. Elucidating the mechanisms by which plant systems sense and respond to external signals is not only an interesting fundamental biological question in itself, but may also have attractive practical implications for agriculture by opening new avenues in the development of efficient strategies to improve the performance of crop plants.

Divided into four distinct parts—*Tropisms, Photoperiodism and Circadian Rhythms, Abiotic Stress Responses*, and *Plant-Pathogen Interactions*—this *Methods in Molecular Biology* volume describes different up-to-date methodological approaches, ranging from physiological assays to imaging and molecular techniques, to study a wide variety of plant responses to environmental cues. Aimed at plant physiologists, biochemists, or cell and molecular biologists, the book includes detailed protocols to investigate some of the many key biological processes underlying plant environmental responses, mostly in the model organism *Arabidopsis thaliana* but also in *Physcomitrella patens* and in different crop species such as rice, potato, barley, or tomato. It will hopefully be of great use to the numerous plant biologists worldwide interested in this exciting and fast-growing research topic.

Contents

<i>Preface</i>	<i>v</i>
<i>Contributors</i>	<i>xi</i>
PART I TROPISMS	
1 Hydrotropism: Analysis of the Root Response to a Moisture Gradient.	3
<i>Regina Antoni, Daniela Dietrich, Malcolm J. Bennett, and Pedro L. Rodriguez</i>	
2 Assessing Gravitropic Responses in <i>Arabidopsis</i>	11
<i>Richard Barker, Benjamin Cox, Logan Silber, Arash Sangari, Amir Assadi, and Patrick Masson</i>	
3 Physiological Analysis of Phototropic Responses in <i>Arabidopsis</i>	21
<i>Mathias Zeidler</i>	
4 Automatic Chloroplast Movement Analysis	29
<i>Henrik Johansson and Mathias Zeidler</i>	
5 Microscopic and Biochemical Visualization of Auxins in Plant Tissues	37
<i>Joshua J. Blakeslee and Angus S. Murphy</i>	
6 Immunolocalization of PIN and ABCB Transporters in Plants	55
<i>Nicola Carraro and Wendy Ann Peer</i>	
PART II PHOTOPERIODISM AND CIRCADIAN RHYTHMS	
7 Analysis of Circadian Leaf Movements	71
<i>Niels A. Müller and José M. Jiménez-Gómez</i>	
8 Sample Preparation of <i>Arabidopsis thaliana</i> Shoot Apices for Expression Studies of Photoperiod-Induced Genes	81
<i>Fernando Andrés, Stefano Torti, Coral Vincent, and George Coupland</i>	
9 A Luciferase-Based Assay to Test Whether Gene Expression Responses to Environmental Inputs Are Temporally Restricted by the Circadian Clock	93
<i>Amaury Montaigne, Markus Christian Berns, and George Coupland</i>	
10 Identification of <i>Arabidopsis</i> Transcriptional Regulators by Yeast One-Hybrid Screens Using a Transcription Factor ORFeome	107
<i>Ghislain Breton, Steve A. Kay, and José L. Pruneda-Paz</i>	
11 Monitoring Alternative Splicing Changes in <i>Arabidopsis</i> Circadian Clock Genes	119
<i>Craig G. Simpson, John Fuller, Cristiane P.G. Calixto, Jim McNicol, Clare Booth, John W.S. Brown, and Dorothee Staiger</i>	
12 Assessing the Impact of Photosynthetic Sugars on the <i>Arabidopsis</i> Circadian Clock	133
<i>Michael J. Haydon and Alex A.R. Webb</i>	

- 13 Assessing Protein Stability Under Different Light and Circadian Conditions 141
Takatoshi Kiba and Rossana Henriques

PART III ABIOTIC STRESS RESPONSES

- 14 Screening for Abiotic Stress Tolerance in Rice: Salt, Cold, and Drought 155
Diego M. Almeida, M. Cecília Almadanim, Tiago Lourenço, Isabel A. Abreu, Nelson J.M. Saibo, and M. Margarida Oliveira
- 15 Basic Techniques to Assess Seed Germination Responses to Abiotic Stress in *Arabidopsis thaliana* 183
Urszula Piskurewicz and Luis Lopez-Molina
- 16 Assessing Tolerance to Heavy-Metal Stress in *Arabidopsis thaliana* Seedlings. 197
Estelle Remy and Paula Duque
- 17 Assessing Drought Responses Using Thermal Infrared Imaging 209
Ankush Prashar and Hamlyn G. Jones
- 18 Generating Targeted Gene Knockout Lines in *Physcomitrella patens* to Study Evolution of Stress-Responsive Mechanisms 221
Monika Maronova and Maria Kalyna
- 19 Screening Stress Tolerance Traits in *Arabidopsis* Cell Cultures 235
Imma Pérez-Salamó, Bogáta Boros, and László Szabados
- 20 Using *Arabidopsis* Protoplasts to Study Cellular Responses to Environmental Stress 247
Ana Confraria and Elena Baena-González
- 21 Construction of Artificial miRNAs to Prevent Drought Stress in *Solanum tuberosum*. 271
Anna Wyrzykowska, Marcin Pieczynski, and Zofia Szweykowska-Kulinska

PART IV PLANT–PATHOGEN INTERACTIONS

- 22 Virus-Induced Gene Silencing for Gene Function Studies in Barley. 293
Maria Barciszewska-Pacak, Artur Jarmotowski, and Andrzej Pacak
- 23 Methods for Long-Term Stable Storage of *Colletotrichum* Species. 309
Kei Hiruma and Yusuke Saijo
- 24 Plant Inoculation with the Fungal Leaf Pathogen *Colletotrichum higginsianum*. 313
Kei Hiruma and Yusuke Saijo
- 25 Tracing Plant Defense Responses in Roots upon MAMP/DAMP Treatment. 319
Kei Hiruma and Yusuke Saijo
- 26 Analysis of the Immunity-Related Oxidative Bursts by a Luminol-Based Assay 323
Marco Trujillo
- 27 Quantitative Analysis of Microbe-Associated Molecular Pattern (MAMP)-Induced Ca²⁺ Transients in Plants 331
Fabian Trespel, Stefanie Ranf, Dierk Scheel, and Justin Lee
- 28 Rapid Assessment of DNA Methylation Changes in Response to Salicylic Acid by Chop-qPCR. 345
Stephanie Rausch and Sascha Laubinger

29	Determining Nucleosome Position at Individual Loci After Biotic Stress Using MNase-qPCR.	357
	<i>Margaux Kaster and Sascha Laubinger</i>	
30	Phosphoprotein Enrichment Combined with Phosphopeptide Enrichment to Identify Putative Phosphoproteins During Defense Response in <i>Arabidopsis thaliana</i>	373
	<i>Ines Lassomskat, Wolfgang Hoehenwarter, Justin Lee, and Dierk Scheel</i>	
	<i>Index</i>	385
