Preface

Tumor necrosis factor (TNF)- α is a pleiotropic cytokine involved in a variety of physiological and pathological processes. After initial discovery of its ability to induce cell death and animal cachexia, it was soon realized that this cytokine played pivotal roles in the regulation of homeostasis and inflammatory-immune responses. This led to an explosion of interest in basic and translational research activities on the role of TNF in many diseases, such as cancer, septic shock, rheumatoid arthritis, and infectious diseases of the central nervous system. Because of its potential therapeutic value, many academic and industrial research groups have worked to discover compounds that can block its activity. These studies have led to the approval of anti-TNF antibodies and soluble TNF receptors for the therapy of rheumatoid arthritis and Crohn's disease. TNF also can be an attractive anticancer agent capable of damaging tumor-associated vessels and of inducing tumor necrosis in patients. The unique properties of TNF have led to its registration as a drug for locoregional treatment of sarcomas of the extremities, and stimulated many preclinical studies aimed at improving its therapeutic index for systemic use.

Tumor Necrosis Factor: Methods and Protocols provides an overview of basic and translational research along with a series of practical procedures on TNF production, characterization, mutagenesis, detection in biological specimens, as well as several in vitro assays and animal models for studying the role of TNF in various diseases. This collection of protocols is a practical response to the great pathophysiological, therapeutic, and toxicological interest in these fields and should be of help to biochemists, molecular biologists, pharmacologists, and clinicians involved in TNF pathophysiology studies or in discovering new drug entities.

Pietro Ghezzi**

Contents

Preface	v
Contributors	ix
1 Tumor Necrosis Factor as a Pharmacological Target Pietro Ghezzi and Anthony Cerami	1
2 Production and Characterization of Recombinant Human and Murine TNF Flavio Curnis and Angelo Corti	9
3 Purification of TNF Binding Proteins Hartmut Engelmann, Dani Aderka, and David Wallach	23
4 Production and Characterization of Receptor-Specific TNF Muteins Paul Ameloot and Peter Brouckaert	33
5 TNF α Promoter Polymorphisms Silvia Fargion, Luca Valenti, Paola Dongiovanni, and Anna Ludovica Fracanzani	47
6 Detection of TNF and TNF Receptor mRNA in Cells and Tissues Roberto Furlan, Giuliana Salani, Alessandra Bergami, and Gianvito Martino	59
7 Immunohistochemical Localization of TNF α and Its Receptors in the Rodent Central Nervous System Paolo Bigini and Tiziana Mennini	73
8 TNF Signaling: Key <i>Protocols</i> Marta Muzio and Simona Saccani	81
9 More Than One Way to Die: <i>Methods to Determine TNF-Induced Apoptosis and Necrosis</i> Tom Vanden Berghe, Geertrui Denecker, Greet Brouckaert, Dmitri Vadimovich Krysko, Katharina D'Herde, and Peter Vandenabeele	101
10 Assessment of TNF α -Induced Endothelial Damage Through the Loss of Its Barrier Function Elisabetta Ferrero	127

11	Genetic Engineering in the Mouse: <i>Tuning TNF/TNFR Expression</i> Eleni Douni, Maria Alexiou, and George Kollias	137
12	TNF α in Experimental Diseases of the CNS Roberto Furlan, Pia Villa, Giorgio Senaldi, and Gianvito Martino	171
13	In Vivo Vascular Leakage Assay Maria Elena Ferrero	191
14	Animal Models of Endotoxic Shock Pia Villa and Pietro Ghezzi	199
15	Collagen-Induced Arthritis as a Model for Rheumatoid Arthritis Richard O. Williams	207
16	Myocardial Infarction: <i>Animal Models</i> Stefano Chimenti, Eleonora Carlo, Serge Masson, Antonio Bai, and Roberto Latini	217
17	Tumor Vascular Therapy With TNF: <i>Critical Review on Animal Models</i> Timo L. M. ten Hagen and Alexander M. M. Eggermont	227
18	Strategies for Improving the Anti-Neoplastic Activity of TNF by Tumor Targeting Angelo Corti	247
	Index	265
