TO NIL AND MERT

Acknowledgements

Many have contributed to this edited book, most of all the authors of the respective chapters. Without their research and their efforts and the intense correspondence that lead to the stage where we are now, this book on *Dispersed Manufacturing Networks*, would not have been possible. The authors always showed understanding by their quick and adequate responses to numerous requests. It was a privilege to work with the authors and exchange thoughts on this topic that is at the forefront of academic research.

Secondly, I would like to acknowledge my gratitude to David Bennett, editor of the *Journal of Manufacturing Technology Management*, and Emerald Group Publishing, the publisher of that journal, for their permission to build on the papers of the *Special Issue on Dispersed Manufacturing Networks*, which appeared in 2006 (Volume 17, Issue 8); this concerns Chapters 3, 6, 7, 8, 10 and 11. All these earlier journal papers have been amended to account for the progress made during the two years after the Special Issue. Two chapters that did not make it to Special Issue, mostly due to the pressing deadlines, complement the rewritten versions of the journal papers; these chapters (4 and 9, based on the earlier submissions) help to complete the picture of *Dispersed Manufacturing Networks* and provide additional insight. Furthermore, it should be noted that an earlier version of Chapter 2 appeared in the proceedings of the *12th International EurOMA Conference*, held in Budapest (2005); the discussions at that conference inspired the writing of this chapter as it is now. Moreover, an earlier version of Chapter 5 appeared in the proceedings of the *9th Annual Cambridge International Manufacturing Symposium*, Cambridge (2004), again encouraged by remarks of the participants.

Thirdly, my indebtedness extends to the reviewers, particularly for the efforts they made for appraising all possible contributions to the Special Issue of the *Journal of Manufacturing Technology Management*, which in turn formed the base for the writings in the book. All chapters, except Chapter 2 and 5, were initially reviewed by: Luis Camarinha-Matos, Vittorio Chiesa, Martin Christopher, David Bennett, Angappa Gunasekaran, Ian Hipkin, Bernard Hon, Thanos Kourouklis, Hermann Kühnle, Sameer Kumar, W.B. Lee, Bart MacCarthy, Mohamed Naim, Andrew Nee, Günther Schuh, Jongyiang Shi, Ann Vereecke, Jack van der Vorst, Seungjin Wang, and Zhang Shu. The critiques were constructive and extensive allowing the authors to reshape the chapters and to take in consideration the valuable comments in addition to my reviewing and remarks.

Fourthly, I credit Carole Gould, Shishank Shishank, Kumaran Sugumaran and Julie Thomson, who have all assisted with the final proofing of the manuscripts. Particularly, Kumaran Sugumaran and Shishank Shishank have taken the time to do the proofing for the majority of the chapters.

Finally, I would like to thank Springer UK (Anthony Doyle, Claire Protherough and Simon Reese) and their editor of the *Advanced Manufacturing Series*, Duc - Truong Pham, for the opportunity to compile and publish this edited book.

Should I have forgotten anyone who has contributed or provided valuable assistance, they should consider this an acknowledgement of their effort and an apology at the same time.

Rob Dekkers
