

Advanced Sciences and Technologies for Security Applications

Series editor

Anthony J. Masys, Associate Professor, Director of Global Disaster Management, Humanitarian Assistance and Homeland Security, University of South Florida, Tampa, USA

Advisory Editor

Gisela Bichler, California State University, San Bernardino, CA, USA
Thirimachos Bourlai, West Virginia University, Statler College of Engineering and Mineral Resources, Morgantown, WV, USA
Chris Johnson, University of Glasgow, Glasgow, UK
Panagiotis Karampelas, Hellenic Air Force Academy, Attica, Greece
Christian Leuprecht, Royal Military College of Canada, Kingston, ON, Canada
Edward C. Morse, University of California, Berkeley, CA, USA
David Skillicorn, Queen's University, Kingston, ON, Canada
Yoshiki Yamagata, National Institute for Environmental Studies, Tsukuba, Ibaraki, Japan

The series *Advanced Sciences and Technologies for Security Applications* comprises interdisciplinary research covering the theory, foundations and domain-specific topics pertaining to security. Publications within the series are peer-reviewed monographs and edited works in the areas of:

- biological and chemical threat recognition and detection (e.g., biosensors, aerosols, forensics)
- crisis and disaster management
- terrorism
- cyber security and secure information systems (e.g., encryption, optical and photonic systems)
- traditional and non-traditional security
- energy, food and resource security
- economic security and securitization (including associated infrastructures)
- transnational crime
- human security and health security
- social, political and psychological aspects of security
- recognition and identification (e.g., optical imaging, biometrics, authentication and verification)
- smart surveillance systems
- applications of theoretical frameworks and methodologies (e.g., grounded theory, complexity, network sciences, modelling and simulation)

Together, the high-quality contributions to this series provide a cross-disciplinary overview of forefront research endeavours aiming to make the world a safer place.

The editors encourage prospective authors to correspond with them in advance of submitting a manuscript. Submission of manuscripts should be made to the Editor-in-Chief or one of the Editors.

Foreword

In the USA, over 350k people suffer ‘digital deaths’ due to information errors, whilst in the UK, the number is around 30k. Poor information management is the culprit: spanning R&D results, Doctor and Surgeon notes, incorrect diagnosis, drug dispensing errors and so on. Even more basic, around 23% of all patient paper documentation is lost or not in the right place at the right time.

ICT and medical professionals have struggled for decades with these thorny problems that ultimately condense down to inadequate management systems, processes, security and governance. Probably the earliest crystallisation was around patient records and a perceived need for absolute security with access anytime, anywhere. But until recently, there was no tried and tested technology offering the capabilities to satisfy every aspect of the identified need. However, blockchain or distributed ledger fits the bill perfectly!

The basic technology has been around for over a decade and has now been widely adopted. And I think we can safely assume that if blockchain is sufficiently secure for cryptocurrencies, military, intelligence, government banking and legal applications, it is good enough for the medical sector. So the subject and content of this book turns out to be both timely and pertinent but, more importantly, sufficiently broad and deep to be both illuminating and enlightening.

The edifying treatment of blockchain technology thoughtfully argues the case for general application across the medical sector. Personally, I appreciated the detail and the vision, along with the prognosis for future application in a sector that we all rely upon. I therefore have no hesitation in commending this book to professional and lay readers alike.

It really is important to understand what blockchain is and how it complements Big Data, the IoT and AI whilst providing a governance tool that can mean the difference between life and death.

Do enjoy the read, and be prepared to be challenged.

Contents

1	Blockchain and Healthcare	1
	Gregory Epiphaniou, Herbert Daly, and Haider Al-Khateeb	
2	Digital Transformation of Healthcare	31
	Hamid Jahankhani and Stefan Kendzierskyj	
3	Healthcare Patient and Clinical Research	53
	Stefan Kendzierskyj and Hamid Jahankhani	
4	Information Security Governance, Technology, Processes and People: Compliance and Organisational Readiness	89
	Berta Pappenheim da Silva, Alonso Jose da Silva II, and Josefine Ehlers Davidsen	
5	Cyber-Physical Attacks and the Value of Healthcare Data: Facing an Era of Cyber Extortion and Organised Crime	115
	Jaime Ibarra, Hamid Jahankhani, and Stefan Kendzierskyj	
6	The Transparency of Big Data, Data Harvesting and Digital Twins	139
	Stefan Kendzierskyj, Hamid Jahankhani, Arshad Jamal, and Jaime Ibarra Jimenez	
7	Blockchain for Modern Digital Forensics: The Chain-of-Custody as a Distributed Ledger	149
	Haider Al-Khateeb, Gregory Epiphaniou, and Herbert Daly	
8	The Standardised Digital Forensic Investigation Process Model (SDFIPM)	169
	Reza Montasari, Richard Hill, Victoria Carpenter, and Amin Hosseinian-Far	

9 Hybrid Cyber Security Framework for the Internet of Medical Things 211
Danisa Nkomo and Raymond Brown

10 BMAR – Blockchain for Medication Administration Records..... 231
I. Mitchell and S. Hara

11 Recent Cyber Attacks and Vulnerabilities in Medical Devices and Healthcare Institutions 249
Jake Beavers and Sina Pournouri
