

SpringerBriefs in Computer Science

Series editors

Stan Zdonik, Brown University, Providence, RI, USA

Shashi Shekhar, University of Minnesota, Minneapolis, MN, USA

Xindong Wu, University of Vermont, Burlington, VT, USA

Lakhmi C. Jain, University of South Australia, Adelaide, SA, Australia

David Padua, University of Illinois Urbana-Champaign, Urbana, IL, USA

Xuemin Sherman Shen, University of Waterloo, Waterloo, ON, Canada

Borko Furht, Florida Atlantic University, Boca Raton, FL, USA

V. S. Subrahmanian, University of Maryland, College Park, MD, USA

Martial Hebert, Carnegie Mellon University, Pittsburgh, PA, USA

Katsushi Ikeuchi, University of Tokyo, Tokyo, Japan

Bruno Siciliano, Università di Napoli Federico II, Napoli, Italy

Sushil Jajodia, George Mason University, Fairfax, VA, USA

Newton Lee, Institute for Education, Research, and Scholarships, Los Angeles, CA, USA

SpringerBriefs present concise summaries of cutting-edge research and practical applications across a wide spectrum of fields. Featuring compact volumes of 50 to 125 pages, the series covers a range of content from professional to academic.

Typical topics might include:

- A timely report of state-of-the art analytical techniques
- A bridge between new research results, as published in journal articles, and a contextual literature review
- A snapshot of a hot or emerging topic
- An in-depth case study or clinical example
- A presentation of core concepts that students must understand in order to make independent contributions

Briefs allow authors to present their ideas and readers to absorb them with minimal time investment. Briefs will be published as part of Springer's eBook collection, with millions of users worldwide. In addition, Briefs will be available for individual print and electronic purchase. Briefs are characterized by fast, global electronic dissemination, standard publishing contracts, easy-to-use manuscript preparation and formatting guidelines, and expedited production schedules. We aim for publication 8–12 weeks after acceptance. Both solicited and unsolicited manuscripts are considered for publication in this series.

Preface

With the rapid development of information technology and the establishment of “human-oriented” new type communication fashion, multimedia services have become more and more accessible everywhere, and everyone can quickly obtain the required information from operators or content providers through multimedia terminals. However, future multimedia service emphasizes not only speed, bandwidth, and quality of service sources but also user feeling and satisfaction. Therefore, for multimedia content providers and network operators, promoting user feeling or even their viscosity is very important in the context of video service explosion and heavy competition.

Based on this background, the concept of multimedia quality of experience (QoE), which is a key metric for the description and evaluation of user subjective feeling for multimedia services, receives much attention. However, due to the existence of big data and subjective characteristic of multimedia user experience, there are several pain points and technical challenges during multimedia QoE evaluation. To handle these issues, this book aims at deeply investigating the key technologies and realizations of multimedia QoE evaluation.

In Chap. 1, we provide the background, motivation, and necessity for research on multimedia QoE evaluation. In Chap. 2, we give technical premise and an overview of existing research works on this topic, including the definition of multimedia QoE, various factors influencing QoE, and multimedia QoE evaluation based on machine learning. In Chap. 3, we describe several representative datasets adopted in our research. Moreover, we propose several methods for extracting influencing factors, especially subjective user-related factors such as viewing time ratio, user interest, user type, user behavior, user comment, and danmaku. In Chap. 4, we design several modeling and prediction algorithms, such as multimedia user complaint prediction for imbalanced dataset and multimedia QoE modeling and prediction based on neural networks and broad learning systems. In Chap. 5, based on the theoretical research results, we realize multimedia QoE evaluation based on a big data platform. It concerns data management, data collection and storage, data analysis and mining, and evaluation result demonstration. In Chap. 6, we summarize this book and highlight the future research directions.

The authors would like to thank Prof. Xuemin Sherman Shen of the University of Waterloo for his invitation and valuable suggestions on this book. The authors would also like to thank Ruo Chen Huang, Yun Gao, Qi Duan, Jiali Mao, Chaoping Lv, and Qifeng Liu of Nanjing University of Posts and Telecommunications for their contributions in the presented research works.

Contents

1	Introduction	1
1.1	Background	1
1.2	Motivation	2
1.3	Necessity	3
	References	4
2	Technical Premise	7
2.1	Definition and Quantification	7
2.1.1	Definition of Multimedia QoE	7
2.1.2	Quantification of Multimedia QoE	8
2.2	Influencing Factors	9
2.2.1	System-Related Influencing Factors	10
2.2.2	Context-Related Influencing Factors	11
2.2.3	User-Related Influencing Factors	12
2.3	Multimedia QoE Evaluation Based on Machine Learning	13
2.3.1	Decision Tree	13
2.3.2	Support Vector Machine	14
2.3.3	Artificial Neural Network	15
2.3.4	Bayesian Network	15
2.3.5	Hidden Markov Model	16
2.3.6	Other Models	16
2.4	Challenges	17
2.5	Summary	18
	References	18
3	Multimedia Service Data Preprocessing and Feature Extraction	21
3.1	Multimedia Service Data Collection and Preprocessing	21
3.1.1	IPTV Service Dataset	21
3.1.2	OTT Service Dataset	22
3.1.3	Dataset Crawled Across the Web	27

3.2	Feature Extraction for Subjective Influencing Factors	28
3.2.1	User Viewing Time Ratio Calculation	29
3.2.2	User Interest Inference	32
3.2.3	User Type Classification	35
3.2.4	User Behavior Analysis	36
3.2.5	User Comment & Danmaku Parsing	38
3.3	Summary	40
	References	41
4	Multimedia QoE Modeling and Prediction	43
4.1	Multimedia User Complaint Prediction for Imbalanced Dataset	43
4.1.1	GMM-Based Oversampling Algorithm.....	43
4.1.2	Decision Tree-Based Cost-Sensitive Algorithm.....	46
4.2	Multimedia QoE Modeling and Prediction Based on Neural Networks	49
4.2.1	Artificial Neural Networks (ANN).....	49
4.2.2	LSTM-Attention Model	51
4.3	Multimedia QoE Modeling and Prediction Based on Broad Learning System	58
4.4	Summary	61
	References	61
5	Implementation and Demonstration	63
5.1	Establishment of Big Data Platform	63
5.2	Multimedia QoE Data Management Tool.....	65
5.2.1	Architecture of Cloudera Manager.....	65
5.2.2	Cluster and Service Management	66
5.3	Multimedia QoE Data Collection and Storage	67
5.3.1	Multimedia QoE Data Collection	67
5.3.2	Multimedia QoE Data Storage	71
5.4	Multimedia QoE Data Analysis and Mining.....	72
5.4.1	Operating Principle of Spark	72
5.4.2	Data Analysis and Mining by Spark	73
5.5	Multimedia QoE Evaluation Result Demonstration	76
5.5.1	User Complaint Prediction Result	76
5.5.2	User Interest Inference Result.....	76
5.5.3	User QoE Prediction Result	77
5.6	Summary	78
	References	78
6	Conclusion	81
6.1	Concluding Remarks	81
6.2	Future Work	82
