# Contents

<b>1</b>	<b>Introduction</b> . . . . .	1
1.1	Differential Equations and Numerical Methods . . . . .	1
1.2	Guidelines for the Development of Approximation Schemes. . . . .	2
1.3	Analytical and Numerical Foundations. . . . .	3
1.4	Approximation of Classical Formulations. . . . .	4
1.5	Numerical Methods for Extended Formulations. . . . .	7
1.6	Objectives and Acknowledgments . . . . .	8
 <b>Part I Analytical and Numerical Foundations</b>		
<b>2</b>	<b>Analytical Background</b> . . . . .	11
2.1	Variational Model Problems . . . . .	11
2.1.1	Deflection of a Membrane . . . . .	11
2.1.2	Minimal Surfaces . . . . .	11
2.1.3	Hyperelastic Materials . . . . .	12
2.1.4	Obstacle Problems. . . . .	13
2.1.5	Harmonic Maps . . . . .	14
2.1.6	Phase-Field Models . . . . .	14
2.1.7	Plate Bending. . . . .	15
2.1.8	Crystalline Phase Transitions . . . . .	15
2.1.9	Free-Discontinuity Problems. . . . .	16
2.1.10	Segmentation Models . . . . .	17
2.1.11	Elastoplasticity . . . . .	17
2.2	Existence of Minimizers . . . . .	18
2.2.1	The Direct Method in the Calculus of Variations. . . . .	19
2.2.2	Sobolev Spaces. . . . .	21
2.2.3	Integral Functionals . . . . .	22
2.2.4	Existence and Properties of Minimizers . . . . .	26

2.3	Gradient Flows . . . . .	29
2.3.1	Differentiation in Banach Spaces . . . . .	30
2.3.2	Bochner–Sobolev Spaces . . . . .	31
2.3.3	Existence Theory for Gradient Flows . . . . .	33
2.3.4	Subdifferential Flows . . . . .	40
	References . . . . .	43
<b>3</b>	<b>FEM for Linear Problems . . . . .</b>	<b>45</b>
3.1	Interpolation with Finite Elements . . . . .	45
3.1.1	Abstract Finite Elements . . . . .	45
3.1.2	$P_1$ Finite Elements . . . . .	46
3.1.3	Projection and Quasi-Interpolation Operators . . . . .	49
3.1.4	Other Estimates . . . . .	52
3.2	Approximation of the Poisson Problem . . . . .	55
3.2.1	Variational Formulation . . . . .	56
3.2.2	Error Estimates . . . . .	57
3.2.3	Discrete Maximum Principle . . . . .	60
3.3	Approximation of the Heat Equation . . . . .	63
3.3.1	Variational Formulation . . . . .	63
3.3.2	Semidiscrete in Time Approximation . . . . .	64
3.3.3	Semidiscrete in Space Approximation . . . . .	68
3.3.4	Fully Discrete Approximation . . . . .	70
3.3.5	Discrete Maximum Principle . . . . .	72
3.3.6	A Posteriori Error Estimate . . . . .	75
3.4	Implementation of the $P_1$ Finite Element Method . . . . .	77
3.4.1	Poisson Problem . . . . .	78
3.4.2	Heat Equation . . . . .	80
	References . . . . .	84
<b>4</b>	<b>Concepts for Discretized Problems . . . . .</b>	<b>85</b>
4.1	Convergence of Minimizers . . . . .	85
4.1.1	Failure of Convergence . . . . .	85
4.1.2	$\Gamma$ -Convergence of Discretizations . . . . .	87
4.1.3	Examples of $\Gamma$ -Convergent Discretizations . . . . .	88
4.1.4	Error Control for Strongly Convex Problems . . . . .	92
4.2	Approximation of Equilibrium Points . . . . .	95
4.2.1	Failure of Convergence . . . . .	95
4.2.2	Abstract Error Estimates . . . . .	96
4.2.3	Abstract Subdifferential Flow . . . . .	102
4.2.4	Weak Continuity Methods . . . . .	105
4.3	Solution of Discrete Problems . . . . .	108
4.3.1	Smooth, Unconstrained Minimization . . . . .	108
4.3.2	Smooth Constrained Minimization . . . . .	112
4.3.3	Nonsmooth Equations . . . . .	116

4.3.4 Nonsmooth, Strongly Convex Minimization . . . . . 118  
 4.3.5 Nested Iteration. . . . . 121  
 References. . . . . 123

**Part II Approximation of Classical Formulations**

**5 The Obstacle Problem. . . . . 127**  
 5.1 Analytical Properties . . . . . 127  
     5.1.1 Existence and Uniqueness . . . . . 127  
     5.1.2 Equivalent Formulations. . . . . 129  
     5.1.3 Regularity . . . . . 131  
     5.1.4 Penalization . . . . . 133  
     5.1.5 Dual Formulation . . . . . 135  
 5.2 Finite Element Approximation . . . . . 137  
     5.2.1 Abstract Error Analysis . . . . . 137  
     5.2.2 Application to *P1*-FEM . . . . . 139  
     5.2.3 A Posteriori Error Analysis . . . . . 140  
 5.3 Iterative Solution Methods . . . . . 143  
     5.3.1 Semismooth Newton Iteration. . . . . 143  
     5.3.2 Global Primal-Dual Method . . . . . 146  
 References. . . . . 152

**6 The Allen–Cahn Equation. . . . . 153**  
 6.1 Analytical Properties . . . . . 153  
     6.1.1 Existence and Regularity . . . . . 154  
     6.1.2 Stability Estimates. . . . . 156  
     6.1.3 Mean Curvature Flow . . . . . 163  
     6.1.4 Topological Changes . . . . . 165  
     6.1.5 Mass Conservation . . . . . 166  
 6.2 Error Analysis . . . . . 167  
     6.2.1 Residual Estimate . . . . . 167  
     6.2.2 A Priori Error Analysis . . . . . 170  
 6.3 Practical Realization . . . . . 174  
     6.3.1 Time-Stepping Schemes. . . . . 175  
     6.3.2 Computation of the Eigenvalue. . . . . 178  
     6.3.3 Implementation. . . . . 180  
 References. . . . . 182

**7 Harmonic Maps . . . . . 183**  
 7.1 Analytical Properties . . . . . 183  
     7.1.1 Existence and Nonuniqueness . . . . . 183  
     7.1.2 Euler–Lagrange Equations and Nonregularity . . . . . 185

7.1.3	Compactness . . . . .	186
7.1.4	Harmonic Map Heat Flow . . . . .	188
7.2	Numerical Approximation . . . . .	189
7.2.1	Discrete Harmonic Maps . . . . .	189
7.2.2	Iterative Computation . . . . .	193
7.2.3	Projection-Free Iteration. . . . .	196
7.2.4	Other Target Manifolds . . . . .	199
7.2.5	Practical Realization . . . . .	200
7.3	Approximation of Constrained Evolution Problems . . . . .	201
7.3.1	Harmonic Map Heat Flow . . . . .	201
7.3.2	Semi-implicit, Linear Schemes . . . . .	203
7.3.3	Constraint Preservation . . . . .	209
7.3.4	Approximation of Wave Maps . . . . .	212
	References. . . . .	215
<b>8</b>	<b>Bending Problems.</b> . . . . .	<b>217</b>
8.1	Mathematical Modeling . . . . .	217
8.1.1	Bending Models . . . . .	217
8.1.2	Relations to Hyperelasticity . . . . .	219
8.1.3	Relations to Linear Elasticity . . . . .	222
8.1.4	Properties of Isometries . . . . .	224
8.2	Approximation of Linear Bending Models. . . . .	226
8.2.1	Discrete Kirchhoff Triangles. . . . .	226
8.2.2	Realization . . . . .	230
8.2.3	Reissner–Mindlin Plate . . . . .	232
8.3	Approximation of the Nonlinear Kirchhoff Model. . . . .	234
8.3.1	Discretization . . . . .	234
8.3.2	Iterative Minimization . . . . .	236
8.3.3	Realization . . . . .	237
8.4	Willmore Flow . . . . .	239
8.4.1	Tangential Differentiation and Curvature . . . . .	239
8.4.2	Normal Variations. . . . .	244
8.4.3	Variation of the Willmore Functional. . . . .	249
8.4.4	Discretization of the Laplace–Beltrami Operator . . . . .	250
8.4.5	A Numerical Scheme for the Willmore Flow . . . . .	251
	References. . . . .	257
 <b>Part III Methods for Extended Formulations</b>		
<b>9</b>	<b>Nonconvexity and Microstructure</b> . . . . .	<b>261</b>
9.1	Analytical Properties . . . . .	261
9.1.1	A Scalar Model Problem . . . . .	262

9.1.2	General Relaxation Result . . . . .	266
9.1.3	Statistical Description of Oscillations . . . . .	267
9.2	Direct and Relaxed Numerical Minimization . . . . .	269
9.2.1	A Lower Bound . . . . .	269
9.2.2	Upper Bounds . . . . .	272
9.2.3	Failure of Direct Minimization . . . . .	275
9.2.4	Approximation of the Relaxed Problem . . . . .	277
9.2.5	Iterative Minimization . . . . .	280
9.3	Approximation of Semi-convex Envelopes . . . . .	282
9.3.1	Upper and Lower Bounds for $W^{qc}$ . . . . .	282
9.3.2	Approximation of $W^{pc}$ . . . . .	285
9.3.3	Adaptive Computation of $W_{\delta,r}^{pc}$ . . . . .	288
9.3.4	Approximation of $W^{rc}$ . . . . .	290
	References . . . . .	295
<b>10</b>	<b>Free Discontinuities . . . . .</b>	<b>297</b>
10.1	Functions of Bounded Variation . . . . .	297
10.1.1	Derivatives of Discontinuous Functions . . . . .	297
10.1.2	Properties of $BV(\Omega)$ . . . . .	300
10.1.3	A Variational Model Problem on $BV(\Omega)$ . . . . .	303
10.2	Numerical Approximation . . . . .	307
10.2.1	$W^{1,1}$ Conforming Approximation . . . . .	307
10.2.2	Piecewise Constant Approximation . . . . .	311
10.2.3	Iterative Solution . . . . .	313
10.2.4	Realization . . . . .	317
10.2.5	A Posteriori Error Control . . . . .	317
10.2.6	Regularized Minimization . . . . .	320
10.2.7	Total Variation Flow . . . . .	321
10.3	Segmentation . . . . .	325
10.3.1	The Mumford–Shah Functional . . . . .	325
10.3.2	Regularization of $I'(u)$ . . . . .	327
10.3.3	Numerical Approximation of $AT_\varepsilon$ . . . . .	328
10.3.4	The Perona–Malik Equation . . . . .	329
	References . . . . .	332
<b>11</b>	<b>Elastoplasticity . . . . .</b>	<b>333</b>
11.1	Modeling and Analytical Properties . . . . .	333
11.1.1	One-Dimensional Plastic Effects . . . . .	333
11.1.2	Hypotheses of Multi-dimensional Elastoplasticity . . . . .	334
11.1.3	Mathematical Model . . . . .	336
11.1.4	Flow Rules and Coercivity . . . . .	337
11.1.5	Equivalent Formulations and Existence . . . . .	340

- 11.2 Approximation of Rate-Independent Evolutions . . . . . 342
  - 11.2.1 Time-Incremental Minimization . . . . . 343
  - 11.2.2 Discretization in Space . . . . . 346
  - 11.2.3 Fully Discrete Approximation . . . . . 348
  - 11.2.4 A Posteriori Error Control . . . . . 350
- 11.3 Numerical Solution . . . . . 352
  - 11.3.1 Solution of the Discretized Flow Rule . . . . . 352
  - 11.3.2 Newton Method for Nonlinear Elasticity . . . . . 356
  - 11.3.3 Implementation of Elastoplasticity . . . . . 358
- References. . . . . 363
