

Lecture Notes in Geoinformation and Cartography

Series editors

William Cartwright, Melbourne, Australia

Georg Gartner, Wien, Austria

Liqu Meng, München, Germany

Michael P. Peterson, Omaha, USA

About the Series

The Lecture Notes in Geoinformation and Cartography series provides a contemporary view of current research and development in Geoinformation and Cartography, including GIS and Geographic Information Science. Publications with associated electronic media examine areas of development and current technology. Editors from multiple continents, in association with national and international organizations and societies bring together the most comprehensive forum for Geoinformation and Cartography.

The scope of Lecture Notes in Geoinformation and Cartography spans the range of interdisciplinary topics in a variety of research and application fields. The type of material published traditionally includes:

- proceedings that are peer-reviewed and published in association with a conference;
- post-proceedings consisting of thoroughly revised final papers; and
- research monographs that may be based on individual research projects.

The Lecture Notes in Geoinformation and Cartography series also includes various other publications, including:

- tutorials or collections of lectures for advanced courses;
- contemporary surveys that offer an objective summary of a current topic of interest; and
- emerging areas of research directed at a broad community of practitioners.

Preface

This volume contains the selected papers and two invited papers presented at the *Seventh International Workshop on Information Fusion and Geographic Information Systems: Deep Virtualization for Mobile GIS (IF&GIS' 2015)* held during May 18–20, 2015 in Grenoble, France. IF&GIS is a biannual international workshop that brings together academics and industrials from a wide range of disciplines including computer science, geography, environmental and urban sciences, applied mathematics and social science at large. It continues a series of successful workshops held regularly since 2003 in St. Petersburg, in Brest in 2011, and 2013 back to the St. Petersburg. It has been continuously organized by “SPIIRAS Hi Tech Research and Development Office Ltd” and the French Naval Academy Research Institute. In 2015 IF&GIS was organized together with the University Grenoble Alpes in co-location with the W2GIS International Symposium. This year IF&GIS was specifically oriented towards virtualization issues related to mobile GIS.

Virtualization is nowadays an accepted standard IT practice and concept whose objective is to provide a set of software technologies that separate the device environment and the associated application software from the physical client device. When applied to the GIS domain, virtualization supports the development of self-contained, centrally managed and user-oriented GIS software on-demand. It allows users to be productive anywhere with virtual GIS-applications that work as if they are locally installed, extending the benefits of virtualization to satisfy a full range of the GIS user requirements.

The objective of this workshop was to present recent scientific and technological innovations related to the development of GIS that can be considered as part of this virtualization effort. The submission process attracted 23 full paper submissions from ten countries, amongst which ten were selected for full paper presentation and eight as abstract presentations at the workshop. The presented papers cover a large set of themes and have been scheduled in three sessions: Web-Based and Location-Based GIS Applications, Geospatial Crowdsourcing, Modeling and Computing, Applying GIS Technologies to Various Application Domains. The scope of the seventh IF&GIS workshop also covers multidisciplinary issues and applications

such as environmental and disaster management, ethnography and historical studies. The program also features two invited papers by Dr. James D. Carswell from the Digital Media Centre of the Dublin Institute of Technology and Professor Leonid I. Borodkin from Lomonosov Moscow State University.

The success of the workshop was assured by the team efforts of sponsors, organizers, reviewers and participants. We would like to recognize the contribution of the Program Committee members and thank all reviewers for their support and hard work. Our sincere gratitude goes to all participants and all authors of the submitted papers. Finally, we also would like to acknowledge the support and collaboration of Springer's LNGC team, managed by Editorial Director Dieter Merkle, Publishing Editor Dr. Christian Witschel, Publishing Editorial Assistant Agata Oelschlaeger and Project Coordinator Suresh Rettagunta.

Contents

Part I Invited Papers

Design and Development of Personal GeoServices for Universities	3
Andrea Ballatore, Thoa Pham, Junjun Yin, Linh Truong-Hong and James D. Carswell	

Spatial Analysis of Peasants' Migrations in Russia/USSR in the First Quarter of the 20th Century.	27
Leonid Borodkin	

Part II Web-Based and Location-Based GIS Applications

RRM—A Referenced Routing Model to Generate a Semantic Service of Navigation in Mobile Devices	43
Ana María Magdalena Saldaña-Pérez, Miguel Torres-Ruiz, Marco Moreno-Ibarra and Giovanni Guzmán-Lugo	

Semantic Trajectories: A Survey from Modeling to Application.	59
Basma H. Albanna, Ibrahim F. Moawad, Sherin M. Moussa and Mahmoud A. Sakr	

Semantic Recommender System for Touristic Context Based on Linked Data	77
Luis Cabrera Rivera, Luis M. Vilches-Blázquez, Miguel Torres-Ruiz and Marco Antonio Moreno Ibarra	

Part III Geospatial Crowdsourcing, Modeling and Computing

**Detecting Clustering Scales with the Incremental K-Function:
Comparison Tests on Actual and Simulated Geospatial Datasets** 93
Ran Tao, Jean-Claude Thill and Ikuho Yamada

Crowd Computing Framework for Geoinformation Tasks 109
Alexander Smirnov and Andrew Ponomarev

Dynamic Resources Management in Agile IGIS 125
Nataly Zhukova and Alexander Vodyaho

Part IV Applying GIS Technologies to Various Application Domains

**Application of GIS Technologies in Historic and Ethnographic
Research** 149
Yan Ivakin and Vladislav Ivakin

**Geoinformation Systems for Maritime Radar Visibility
Zone Modelling** 161
Oksana Smirnova and Vasily Svetlichny
