Preface

This book is devoted to the problems that occur when attempting to understand and construct a concise representation of the original conditions, composition and dynamics of the evolution of the Earth-Moon system in the form in which it is seen today. This volume will perhaps contribute to a better understanding of what is necessary to research the dynamics of the Solar system.

The complexity of the problem demands great effort from many generations of outstanding scientists. In the introduction, which by no means claims that this work is comprehensive, we wish to illustrate the idea that any weaknesses in the conclusions and the obtained consequences are mainly due to the limitations of the observed experimental data, the analytical base of the geochemical and isotopic research, and the possibilities of astronomy and geophysical methods. That problem is addressed in the first chapter.

In other chapters, attention is mainly directed to the presentation of researching results on the dynamics of the formation of the Earth and Moon, which are based on Safronov's accumulation model and the results of numerical mathematical modelling. These results show that the account of heat release from the decay of short-living radioactive elements leads to the early heating of pre-planetary bodies and makes the collisions inelastic. The consequence of that is the realization of the process of matter differentiation, which results in the combining of fragments enriched by iron with a low melting temperature, while the more infusible silicate parts remain in the proto-planetary cloud. A significant role in the thermal balance of the growing planet was played by the existence of a poorly transparent atmosphere with a large amount of silicate dust. Finally, we present the first results obtained by numerical solution of the evolutionary problem for a 3-D medium

model, which describes the development of thermal heterogeneities, which are stipulated by the random distribution of the bodies and particles falling on the surfaces of the growing Earth and Moon.

We are grateful to the Russian Fund of Fundamental Research for its support by the Grant 13-05-00138 and also to Petra van Steenbergen at Springer for support.

Contents

| | |
|---|----|
| 1 Introduction | 1 |
| References | 4 |
| 2 The Solar System | 7 |
| 2.1 Interstellar Clouds | 7 |
| 2.2 The Role of the Supernova in the Formation of the Solar System | 9 |
| 2.3 Physical Parameters of the Solar System | 11 |
| 2.4 The Mass Material Distribution in the Solar System | 12 |
| 2.5 The Nature of the Asteroids Belt | 13 |
| 2.6 The Possible Mechanism of the Formation of the Sun and Planets | 14 |
| References | 15 |
| 3 The Model of the Earth's Heterogeneous Accumulation | 17 |
| 3.1 Models of the Earth's Formation | 17 |
| 3.2 The Sequence of Mineral Condensation from the Gaseous Phase and Accumulation of the Solid Phase. | 19 |
| 3.3 The Initial Earth's Pre-planetary Bodies | 22 |
| References | 25 |
| 4 Formation of the Earth's Core | 27 |
| 4.1 Mechanism of the Earth's Core Formation and Its Possible Composition | 27 |
| 4.2 The Temperature Regime During the Process of the Earth's Core Growing | 31 |
| References | 35 |

| | | |
|----------|---|----|
| 5 | Formation of the Earth's Silicate Mantle | 37 |
| 5.1 | The Sequence of Formation and the Age of Meteoritic Material | 37 |
| 5.2 | Possible Composition of the Earth's Mantle | 43 |
| 5.3 | Melting and Crystallization of Material During the Process of the Earth's Mantle Formation | 45 |
| | References | 47 |
| 6 | Formation of the Earth's Proto-Crust | 49 |
| 6.1 | The Possible Composition and Structure of the Earth's Upper Mantle | 49 |
| 6.2 | Condition of Archaean Proto-Crust Formation | 53 |
| | References | 56 |
| 7 | About the Origin of the Moon Matter | 59 |
| 7.1 | The Hypothesis of the Moon's Formation | 59 |
| 7.2 | Current Data on Composition and Inner Structure of the Moon | 60 |
| 7.3 | The Possible Source of Material in Its Early Stage of Growth | 61 |
| 7.4 | The Composition of the Moon's Matter | 62 |
| 7.5 | Thermal State and Evolution of the Moon's Material | 63 |
| | References | 65 |
| 8 | Conclusions | 67 |
| | Appendix | 69 |
