

# **SpringerBriefs in Cognitive Computation**

**Editor-in-chief**

Amir Hussain, Stirling, UK

## **About the Series**

SpringerBriefs in Cognitive Computation are an exciting new series of slim high-quality publications of cutting-edge research and practical applications covering the whole spectrum of multi-disciplinary fields encompassed by the emerging discipline of Cognitive Computation. The Series aims to bridge the existing gap between life sciences, social sciences, engineering, physical and mathematical sciences, and humanities.

The broad scope of Cognitive Computation covers basic and applied work involving bio-inspired computational, theoretical, experimental and integrative accounts of all aspects of natural and artificial cognitive systems, including: perception, action, attention, learning and memory, decision making, language processing, communication, reasoning, problem solving, and consciousness.

# Preface

This book was originally intended as a journal article. However, after a year of trying to get it published with a reputable journal, the editors and associate editors agreed on one thing. It was simply too long and needed to be shortened. This meant removing critical or even important aspects of the research work that might have affected its ability of being properly reproduced or adapted to other areas of research by others. Therefore, we decided against it and found our way here instead. We are grateful to Springer for providing us this alternative avenue. The content has therefore been expanded somewhat and modified to suit the style of a book. We hope this work will prove to be a seminal and valuable reference to researchers not only in artificial intelligence (AI) but also other areas in the decades to come.

## Acknowledgments

This research was supported by the Ministry of Science, Technology and Innovation (MOSTI) in Malaysia under their *eScienceFund* research grant (01-02-03-SF0240). We would also like to sincerely thank Vlaicu Crisan who provided detailed feedback pertaining to the DSNS-generated compositions, and Cameron Browne for his various contributions to the project.

# Contents

<b>1 Introduction</b> . . . . .	1
References . . . . .	3
<b>2 Review</b> . . . . .	5
References . . . . .	8
<b>3 Methodology</b> . . . . .	11
3.1 Overview . . . . .	11
3.2 The DSNS Approach Explained. . . . .	12
3.3 Using Different Domains . . . . .	16
3.4 Using Strings of Different Length . . . . .	17
3.5 Assumptions and Implications . . . . .	18
References . . . . .	19
<b>4 Experimental Work</b> . . . . .	21
4.1 The Domain of Investigation . . . . .	21
4.2 The Experimental Tool . . . . .	23
4.3 The First Experiment: Same Domain . . . . .	24
4.4 The Second Experiment: Different Domains . . . . .	28
4.5 The Third Experiment: Variations in the Number of Objects and Attributes . . . . .	33
4.6 The Fourth Experiment: Human Expert Assessment . . . . .	36
4.7 The Fifth Experiment: Comparing TG1500p and Comp3.5 . . . . .	39
4.8 The Sixth Experiment: Comparisons Against the State-of-the-Art. . . . .	40
4.9 Human Versus Computer Composition . . . . .	42
References . . . . .	43
<b>5 Consolidation of Results</b> . . . . .	45
5.1 General Findings . . . . .	45
5.1.1 On the DSNS . . . . .	45
5.1.2 Extended Findings . . . . .	46

5.2 Limitations of the DSNS and Its Possible Application  
in Other Domains . . . . . 47

**6 Conclusions . . . . . 49**

**Appendix A: Chess Problem Composing Steps. . . . . 51**

**Appendix B: Two Columns of DSNS Strings in a Spreadsheet . . . . . 55**

**Appendix C: The 90 DSNS-Generated Compositions Evaluated  
by the Human Experts . . . . . 65**

**Appendix D: The Human Expert Evaluations of the 90  
DSNS-Generated Compositions . . . . . 69**

**Appendix E: Unedited Expert Commentary on the DSNS-Generated  
Problems . . . . . 73**

**Appendix F: Unedited Microsoft Visual Basic 6 Source Code  
of Chesthetica v9.95's Composing Subroutine. . . . . 87**

**Index . . . . . 119**

## About the Authors

**Azlan Iqbal** received the B.Sc. and M.Sc. degrees in computer science from Universiti Putra Malaysia (2000 and 2001, respectively) and the Ph.D. degree in computer science (artificial intelligence) from the University of Malaya in 2009. He has been with the College of Information Technology, Universiti Tenaga Nasional since 2002, where he is senior lecturer. He is a member of the IEEE and AAAI and chief editor of the electronic Journal of Computer Science and Information Technology (eJCSIT). His research interests include computational aesthetics and computational creativity in games.

**Matej Guid** received his B.Sc. (2005) and Ph.D. (2010) degrees in computer science from the Faculty of Computer and Information Science at the University of Ljubljana, Slovenia. He is an assistant professor at the Artificial Intelligence Laboratory, University of Ljubljana. His research interests include heuristic search, computer game playing, automated explanation and tutoring systems, and argument-based machine learning. Chess has been one of his favorite hobbies since childhood. He was also a junior champion of Slovenia a couple of times and holds the title of FIDE master.

**Simon Colton** is Professor of computational creativity and EPSRC Leadership Fellow in the Department of Computing of Goldsmiths College, University of London, and previously reader in computational creativity at Imperial College London. He heads the Computational Creativity Group, which studies notions related to creativity in software. He has published over 120 papers on AI topics such as machine learning, constraint solving, computational creativity, evolutionary techniques, the philosophy of science, mathematical discovery, visual arts, and game design. He is the author of the programs HR and The Painting Fool.

**Jana Krivec** received her B.Sc. in psychology at the University of Ljubljana in 2004 and her Ph.D. in psychology (cognitive science) in 2013 at the same university. She works as a researcher at Jožef Stefan Institute since 2004. Her research interests include cognitive science combined with artificial intelligence, in particular, the game of chess. Notably, she is also a chess woman grand master and several times Slovenian champion.

**Shazril Azman** earned diploma in information technology (IT) in 2009 and bachelor's degree in graphic and multimedia in 2012. He has been involved in projects and workshops related to Web development, graphic design, computer animation, and augmented reality throughout his years of study. He currently is pursuing his master's degree in information technology. His areas of interest are artificial intelligence, arts, and computational creativity.

**Boshra Haghghi** (originally from Iran) received her B.Sc. in systems and networking (Hons. 2009) and M. Sc. in information technology (2012) from Universiti Tenaga Nasional, Malaysia. She served as research assistant for 18 months to Azlan Iqbal under the eScienceFund research grant (01-02-03-SF0240). Her main interest is working as academic and researcher. Her research interests include human–computer interaction, e-learning, information systems, and artificial intelligence.
