Preface

The book series *Neuroscience and Respiration* presents contributions by expert researchers and clinicians in the field of pulmonary disorders. The chapters provide timely overviews of contentious issues or recent advances in the diagnosis, classification, and treatment of the entire range of pulmonary disorders, both acute and chronic. The texts are thought as a merger of basic and clinical research dealing with respiratory medicine, neural and chemical regulation of respiration, and the interactive relationship between respiration and other neurobiological systems such as cardiovascular function or the mind-to-body connection. The authors focus on the leading-edge therapeutic concepts, methodologies, and innovative treatments. Pharmacotherapy is always in the focus of respiratory research. The action and pharmacology of existing drugs and the development and evaluation of new agents are the heady area of research. Practical, data-driven options to manage patients will be considered. New research is presented regarding older drugs, performed from a modern perspective or from a different pharmacotherapeutic angle. The introduction of new drugs and treatment approaches in both adults and children also is discussed.

Lung ventilation is ultimately driven by the brain. However, neuropsychological aspects of respiratory disorders are still mostly a matter of conjecture. After decades of misunderstanding and neglect, emotions have been rediscovered as a powerful modifier or even the probable cause of various somatic disorders. Today, the link between stress and respiratory health is undeniable. Scientists accept a powerful psychological connection that can directly affect our quality of life and health span. Psychological approaches, by decreasing stress, can play a major role in the development and therapy of respiratory diseases.

Neuromolecular aspects relating to gene polymorphism and epigenesis, involving both heritable changes in the nucleotide sequence and functionally relevant changes to the genome that do not involve a change in the nucleotide sequence, leading to respiratory disorders will also be tackled. Clinical advances stemming from molecular and biochemical research are but possible if the research findings are translated into diagnostic tools, therapeutic procedures, and education, effectively reaching physicians and patients. All that cannot be achieved without a multidisciplinary, collaborative, bench-to-bedside approach involving both researchers and clinicians.

The societal and economic burden of respiratory ailments has been on the rise worldwide leading to disabilities and shortening of life span. COPD alone causes more than three million deaths globally each year. Concerted efforts are required to improve this situation, and part of those efforts are gaining insights into the underlying mechanisms of disease and staying abreast with the latest developments in diagnosis and treatment regimens. It is hoped that the books published in this series will assume a leading role in the field of respiratory medicine and research and will become a source of reference and inspiration for future research ideas.

I would like to express my deep gratitude to Mr. Martijn Roelandse and Ms. Tanja Koppejan from Springer's Life Sciences Department for their genuine interest in making this scientific endeavor come through and in the expert management of the production of this novel book series.

Contents

Spirometry or Body Plethysmography for the Assessment of Bronchial Hyperresponsiveness?	1
R. Merget, F. Nensa, E. Heinze, D. Taeger, and T. Bruening	
Clinical Effects, Exhaled Breath Condensate pH and Exhaled Nitric Oxide in Humans After Ethyl Acrylate Exposure	11
F. Hoffmeyer, J. Bünger, C. Monsé, H. Berresheim, B. Jettkant, A. Beine, T. Brüning, and K. Sucker	
Effectiveness of PCR and Immunofluorescence Techniques for Detecting Human Cytomegalovirus in Blood and Bronchoalveolar Lavage Fluid	21
A. Roży, K. Duk, B. Szumna, P. Skrońska, D. Gawryluk, and J. Chorostowska-Wynimko	
The Role of Ion Channels to Regulate Airway Ciliary Beat Frequency During Allergic Inflammation	27
M. Joskova, M. Sutovska, P. Durdik, D. Koniar, L. Hargas, P. Banovcin, M. Hrianka, V. Khazaei, L. Pappova, and S. Franova	
Content of Asthmagen Natural Rubber Latex Allergens in Commercial Disposable Gloves	37
C. Bittner, M.V. Garrido, L.H. Krach, and V. Harth	
Thermal Sensitivity and Dimethyl Sulfoxide (DMSO)	45
Kotaro Takeda, Mieczyslaw Pokorski, and Yasumasa Okada	
IgE Reactivity, Work Related Allergic Symptoms, Asthma Severity, and Quality of Life in Bakers with Occupational Asthma	51
C. Bittner, M.V. Garrido, V. Harth, and A.M. Preisser	
Effects of Selective Inhibition of PDE4 by YM976 on Airway Reactivity and Cough in Ovalbumin-Sensitized Guinea Pigs	61
J. Mokřý, A. Urbanová, I. Medvedová, M. Kertys, P. Mikolka, P. Kosutová, and D. Mokřá	

Airway Defense Control Mediated <i>via</i> Voltage-Gated Sodium Channels	71
M. Kocmalova, M. Joskova, S. Franova, P. Banovcin, and M. Sutovska	
Virological Characteristics of the 2014/2015 Influenza Season Based on Molecular Analysis of Biological Material Derived from I-MOVE Study	81
E. Hallmann-Szelińska, K. Bednarska, M. Korczyńska, I. Paradowska-Stankiewicz, and L.B. Brydak	
Index	87
