

# Biosystems & Biorobotics

Volume 16

## Series editor

Eugenio Guglielmelli, Laboratory of Biomedical Robotics, Università Campus Bio-Medico, Rome, Italy  
e-mail: e.guglielmelli@unicampus.it

## Editorial Board

Dino Accoto, Campus Bio-Medico University of Rome, Rome, Italy  
Sunil Agrawal, University of Delaware, Newark, DE, USA  
Fabio Babiloni, Sapienza University of Rome, Rome, Italy  
Jose M. Carmena, University of California, Berkeley, CA, USA  
Maria Chiara Carrozza, Scuola Superiore Sant'Anna, Pisa, Italy  
Paolo Dario, Scuola Superiore Sant'Anna, Pisa, Italy  
Arturo Forner-Cordero, University of Sao Paulo, São Paulo, Brazil  
Masakatsu G. Fujie, Waseda University, Tokyo, Japan  
Nicolas Garcia, Miguel Hernández University of Elche, Elche, Spain  
Neville Hogan, Massachusetts Institute of Technology, Cambridge, MA, USA  
Hermano Igo Krebs, Massachusetts Institute of Technology, Cambridge, MA, USA  
Dirk Lefeber, Universiteit Brussel, Brussels, Belgium  
Rui Loureiro, Middlesex University, London, UK  
Marko Munih, University of Ljubljana, Ljubljana, Slovenia  
Paolo M. Rossini, University Cattolica del Sacro Cuore, Rome, Italy  
Atsuo Takanishi, Waseda University, Tokyo, Japan  
Russell H. Taylor, The Johns Hopkins University, Baltimore, MA, USA  
David A. Weitz, Harvard University, Cambridge, MA, USA  
Loredana Zollo, Campus Bio-Medico University of Rome, Rome, Italy

## *Aims & Scope*

Biosystems & Biorobotics publishes the latest research developments in three main areas: 1) understanding biological systems from a bioengineering point of view, i.e. the study of biosystems by exploiting engineering methods and tools to unveil their functioning principles and unrivalled performance; 2) design and development of biologically inspired machines and systems to be used for different purposes and in a variety of application contexts. The series welcomes contributions on novel design approaches, methods and tools as well as case studies on specific bioinspired systems; 3) design and developments of nano-, micro-, macrodevices and systems for biomedical applications, i.e. technologies that can improve modern healthcare and welfare by enabling novel solutions for prevention, diagnosis, surgery, prosthetics, rehabilitation and independent living.

On one side, the series focuses on recent methods and technologies which allow multiscale, multi-physics, high-resolution analysis and modeling of biological systems. A special emphasis on this side is given to the use of mechatronic and robotic systems as a tool for basic research in biology. On the other side, the series authoritatively reports on current theoretical and experimental challenges and developments related to the “biomechatronic” design of novel biorobotic machines. A special emphasis on this side is given to human-machine interaction and interfacing, and also to the ethical and social implications of this emerging research area, as key challenges for the acceptability and sustainability of biorobotics technology.

The main target of the series are engineers interested in biology and medicine, and specifically bioengineers and bioroboticists. Volume published in the series comprise monographs, edited volumes, lecture notes, as well as selected conference proceedings and PhD theses. The series also publishes books purposely devoted to support education in bioengineering, biomedical engineering, biomechatronics and biorobotics at graduate and post-graduate levels.

## *About the Cover*

The cover of the book series Biosystems & Biorobotics features a robotic hand prosthesis. This looks like a natural hand and is ready to be implanted on a human amputee to help them recover their physical capabilities. This picture was chosen to represent a variety of concepts and disciplines: from the understanding of biological systems to biomechatronics, bioinspiration and biomimetics; and from the concept of human-robot and human-machine interaction to the use of robots and, more generally, of engineering techniques for biological research and in healthcare. The picture also points to the social impact of bioengineering research and to its potential for improving human health and the quality of life of all individuals, including those with special needs. The picture was taken during the LIFEHAND experimental trials run at Università Campus Bio-Medico of Rome (Italy) in 2008. The LIFEHAND project tested the ability of an amputee patient to control the Cyberhand, a robotic prosthesis developed at Scuola Superiore Sant’Anna in Pisa (Italy), using the tf-LIFE electrodes developed at the Fraunhofer Institute for Biomedical Engineering (IBMT, Germany), which were implanted in the patient’s arm. The implanted tf-LIFE electrodes were shown to enable bidirectional communication (from brain to hand and vice versa) between the brain and the Cyberhand. As a result, the patient was able to control complex movements of the prosthesis, while receiving sensory feedback in the form of direct neurostimulation. For more information please visit <http://www.biorobotics.it> or contact the Series Editor.

# Contents

## **Part I Clinical Focus on Rehabilitation and Assistive WRs**

<b>Clinical Evaluation of a Socket-Ready Naturally Controlled Multichannel Upper Limb Prosthetic System</b> . . . . .	3
Ivan Vujaklija, Sebastian Amsuess, Aidan D. Roche, Dario Farina and Oskar C. Aszmann	

<b>Evaluation of a Robotic Exoskeleton for Gait Training in Acute Stroke: A Case Study</b> . . . . .	9
Ghaith J. Androwis and Karen J. Nolan	

<b>Wearable Exoskeleton Assisted Rehabilitation in Multiple Sclerosis: Feasibility and Experience</b> . . . . .	15
Shuo-Hsiu Chang, Marcie Kern, Taimoor Afzal, Shih-Chiao Tseng, John Lincoln and Gerard Francisco	

<b>Exoskeletons for Rehabilitation and Personal Mobility: Creating Clinical Evidence</b> . . . . .	21
P. T. Arun Jayaraman and William Z. Rymer	

<b>Lower Limb Wearable Systems for Mobility and Rehabilitation Challenges: Clinical Focus</b> . . . . .	25
Federica Tamburella, Marcella Masciullo, Iolanda Pisotta, Nevio Luigi Tagliamonte and Marco Molinari	

## **Part II Emerging Technologies in WRs**

<b>Impedance Control of Series Elastic Actuators Using Acceleration Feedback</b> . . . . .	33
Andrea Calanca, Riccardo Muradore and Paolo Fiorini	

<b>Kinetic Energy Recovery in Human Joints: The Flywheel-Infinitely Variable Transmission Actuator</b> . . . . .	39
Roberta Alò, Francesco Bottiglione and Giacomo Mantriota	
<b>A Compliant Lightweight and Adaptable Active Ankle Foot Orthosis for Robotic Rehabilitation</b> . . . . .	45
Marta Moltedo, Tomislav Bacek, Kevin Langlois, Karen Junius, Bram Vanderborght and Dirk Lefeber	
<b>A Novel Shoulder Mechanism with a Double Parallelogram Linkage for Upper-Body Exoskeletons</b> . . . . .	51
Simon Christensen and Shaoping Bai	
<b>A Soft Robotic Extra-Finger and Arm Support to Recover Grasp Capabilities in Chronic Stroke Patients</b> . . . . .	57
Irfan Hussain, Gionata Salvietti, Giovanni Spagnoletti, David Cioncoloni, Simone Rossi and Domenico Prattichizzo	
<b>A Quasi-Passive Knee Exoskeleton to Assist During Descent</b> . . . . .	63
Emily Rogers, Panagiotis Polygerinos, Stephen Allen, Fausto A. Panizzolo, Conor J. Walsh and Dónal P. Holland	
<b>Wearable Sensory Apparatus for Multi-segment System Orientation Estimation with Long-Term Drift and Magnetic Disturbance Compensation</b> . . . . .	69
Sebastjan Šljapah, Roman Kamnik and Marko Munih	
<b>A Portable Active Pelvis Orthosis for Ambulatory Movement Assistance</b> . . . . .	75
Andrea Parri, Tingfang Yan, Francesco Giovacchini, Mario Cortese, Marco Muscolo, Matteo Fantozzi, Raffaele Molino Lova and Nicola Vitiello	
<b>Part III Soft Wearable Robotics</b>	
<b>XoSoft - A Vision for a Soft Modular Lower Limb Exoskeleton</b> . . . . .	83
Jesus Ortiz, Eduardo Rocon, Valerie Power, Adam de Eyto, Leonard O’Sullivan, Markus Wirz, Christoph Bauer, Samuel Schülein, Konrad S. Stadler, Barbara Mazzolai, Wouter B. Teeuw, Chris Baten, Corien Nikamp, Jaap Buurke, Freygardur Thorsteinsson and Jeanette Müller	
<b>On the Efficacy of Isolating Shoulder and Elbow Movements with a Soft, Portable, and Wearable Robotic Device</b> . . . . .	89
Zahra Kadivar, Christopher E. Beck, Roger N. Rovekamp, Marcia K. O’Malley and Charles A. Joyce	

**Design Improvement of a Polymer-Based Tendon-Driven Wearable Robotic Hand (Exo-Glove Poly)** . . . . . 95  
 Haemin Lee, Brian Byunghyun Kang, Hyunki In and Kyu-Jin Cho

**Affective Touch and Low Power Artificial Muscles for Rehabilitative and Assistive Wearable Soft Robotics** . . . . . 101  
 Jonathan Rossiter, Espen Knoop and Yuichi Nakamura

**Evaluation of Force Tracking Controller with Soft Exosuit for Hip Extension Assistance** . . . . . 107  
 Hao Su, Ye Ding, Ignacio Galiana, Jozefien Speeckaert, Nikos Karavas, Philippe Malcolm, Christopher Siviý and Conor J. Walsh

**Part IV Neural Interfacing of WRs**

**Endogenous Control of Powered Lower-Limb Exoskeleton** . . . . . 115  
 Kyuhwa Lee, Dong Liu, Laetitia Perroud, Ricardo Chavarriaga and José del R. Millán

**Natural User-Controlled Ambulation of Lower Extremity Exoskeletons for Individuals with Spinal Cord Injury** . . . . . 121  
 Kiran Karunakaran, Ghaith Androwis and Richard Foulds

**Real-Time Modeling for Lower Limb Exoskeletons** . . . . . 127  
 Guillaume Durandau, Massimo Sartori, Magdo Bortole, Juan C. Moreno, José L. Pons and Dario Farina

**Towards Everyday Shared Control of Lower Limb Exoskeletons** . . . . . 133  
 Tom Carlson

**Part V Biomechanics and Neurophysiological studies with WRs**

**Joint-Level Responses to Counteract Perturbations Scale with Perturbation Magnitude and Direction** . . . . . 139  
 Mark Vlutters, Edwin H. F. van Asseldonk and Herman van der Kooij

**Metabolic Energy Consumption in a Box-Lifting Task: A Parametric Study on the Assistive Torque** . . . . . 143  
 Mohammad S. Shourijeh, Moonki Jung and Michael Damsgaard

**Analysis of the Movement Variability in Dance Activities Using Wearable Sensors** . . . . . 149  
 Miguel Xochicale, Chris Baber and Mourad Oussalah

## **Part VI New developments in Wearable Rehabilitation Robotics**

### **Real Time Computation of Centroidal Momentum for the Use as a Stability Index Applicable to Human Walking with Exoskeleton . . . . . 157**

Je Hyung Jung, Lidwine Van Opheusden, Pierre Barralon  
and Jan F. Veneman

### **A Versatile Neuromuscular Exoskeleton Controller for Gait Assistance: A Preliminary Study on Spinal Cord Injury Patients . . . . . 163**

Amy R. Wu, Florin Dzeladini, Tycho J. H. Brug, Federica Tamburella,  
Nevio L. Tagliamonte, Edwin van Asseldonk, Herman van der Kooij  
and Auke J. Ijspeert

### **Introducing a Modular, Personalized Exoskeleton for Ankle and Knee Support of Individuals with a Spinal Cord Injury . . . . . 169**

Cory Meijneke, Shiqian Wang, Victor Sluiter and Herman van der Kooij

### **Towards Exoskeletons with Balance Capacities . . . . . 175**

Herman van der Kooij, Edwin H. F. van Asseldonk and Mark Vlutters

### **EMG-Based Detection of User's Intentions for Human-Machine Shared Control of an Assistive Upper-Limb Exoskeleton . . . . . 181**

A. Accogli, L. Grazi, S. Crea, A. Panarese, J. Carpaneto, N. Vitiello  
and S. Micera

## **Part VII Legal Framework, standardization and ethical issues in WRs**

### **Safety Standardization of Wearable Robots—The Need for Testing Methods . . . . . 189**

Jan F. Veneman

### **The Potential and Acceptance of Exoskeletons in Industry . . . . . 195**

Michiel P. de Looze, Frank Krause and Leonard W. O'Sullivan

### **Wearable Robots: A Legal Analysis . . . . . 201**

Andrea Bertolini

### **A Verification Method for Testing Abrasion in the Use of Restraint Type Personal Care Robots . . . . . 205**

Yoji Yamada, Mao Xuewei, Kengo Yoshida, Yasuhiro Akiyama  
and Shogo Okamoto

## **Part VIII Benchmarking in WRs and related communities**

### **Kinematic Comparison of Gait Rehabilitation with Exoskeleton and End-Effector Devices . . . . . 213**

Byung-Woo Ko and Won-Kyung Song

**Evaluating the Gait of Lower Limb Prosthesis Users** . . . . . 219  
 Stephanie L. Carey, Kyle B. Reed, Amanda Martori, Tyagi Ramakrishnan  
 and Rajiv Dubey

**Some Considerations on Benchmarking of Wearable Robots  
 for Mobility** . . . . . 225  
 Jan F. Veneman

**Benchmarking Data for Human Walking in Different Scenarios** . . . . . 231  
 Katja Mombaur, Debora Clever and Alexander Schubert

**Clinical Gait Assessment in Relation to Benchmarking  
 Robot Locomotion** . . . . . 235  
 J. H. Buurke, J. F. Veneman and D. Torricelli

**Part IX Symbiotic Control of WRs**

**Attention Level Measurement During Exoskeleton Rehabilitation  
 Through a BMI System** . . . . . 243  
 Álvaro Costa, Guillermo Asín-Prieto, José González-Vargas,  
 Eduardo Iáñez, Juan C. Moreno, Antonio J. Del-Ama,  
 Ángel Gil-Agudo and José M. Azorín

**Detection of Subject’s Intention to Trigger Transitions Between Sit,  
 Stand and Walk with a Lower Limb Exoskeleton** . . . . . 249  
 Fernando Trincado-Alonso, Antonio J. del Ama-Espinosa,  
 Guillermo Asín-Prieto, Elisa Piñuela-Martín, Soraya Pérez-Nombela,  
 Ángel Gil-Agudo, José Luis Pons and Juan C. Moreno

**The New Generation of Compliant Actuators for Use in Controllable  
 Bio-Inspired Wearable Robots** . . . . . 255  
 T. Bacek, M. Moltedo, J. Gonzalez-Vargas, G. Asin Prieto,  
 M. C. Sanchez-Villamañan, J. C. Moreno and D. Lefeber

**An EMG-informed Model to Evaluate Assistance of the Biomot  
 Compliant Ankle Actuator** . . . . . 261  
 Elena Ceseraciu, Luca Tagliapietra, Juan C. Moreno, Guillermo Asin,  
 Antonio J. del-Ama, Soraya Pérez, Elisa Piñuela, Ángel Gil  
 and Monica Reggiani

**Tacit Adaptability of a Mechanically Adjustable Compliance and  
 Controllable Equilibrium Position Actuator, a Preliminary Study** . . . . . 267  
 Guillermo Asín-Prieto, Shingo Shimoda, José González,  
 M. Carmen Sánchez-Villamañán, José L. Pons and Juan C. Moreno

## **Part X Emerging Applications Domains of WRs, Emerging Technologies in WRs**

<b>Design and Kinematic Analysis of the Hanyang Exoskeleton Assistive Robot (HEXAR) for Human Synchronized Motion</b> . . . . .	275
Wansoo Kim, Hojun Kim, Donghwan Lim, Hyungi Moon and Changsoo Han	
<b>Design and Experimental Evaluation of a Low-Cost Robotic Orthosis for Gait Assistance in Subjects with Spinal Cord Injury</b> . . . . .	281
Josep M. Font-Llagunes, Daniel Clos, Urbano Lujrís, F. Javier Alonso and Javier Cuadrado	
<b>A Powered Low-Back Exoskeleton for Industrial Handling: Considerations on Controls</b> . . . . .	287
Stefano Toxiri, Jesús Ortiz, Jawad Masood, Jorge Fernández, Luis A. Mateos and Darwin G. Caldwell	
<b>Efficient Lower Limb Exoskeleton for Human Motion Assistance</b> . . . . .	293
Nazim Mir-Nasiri	
<b>Active Safety Functions for Industrial Lower Body Exoskeletons: Concept and Assessment.</b> . . . . .	299
Jawad Masood, Luis A. Mateos, Jesús Ortiz, Stefano Toxiri, Leonard O’Sullivan and Darwin Caldwell	
<b>SOLEUS: Ankle Foot Orthosis for Space Countermeasure with Immersive Virtual Reality</b> . . . . .	305
Pierre Letier, Guillaume Fau, Uwe Mittag, Jochen Zange, Joern Rittweger, Moonki Jung, Jo McIntyre and Arnaud Runge	
<b>SPEXOR: Spinal Exoskeletal Robot for Low Back Pain Prevention and Vocational Reintegration.</b> . . . . .	311
Jan Babič, Katja Mombaur, Dirk Lefeber, Jaap van Dieën, Bernhard Graimann, Michael Russold, Nejc Šarabon and Han Houdijk	
<b>Part XI Posters</b>	
<b>HeSA, Hip Exoskeleton for Superior Assistance.</b> . . . . .	319
Thomas G. Sugar, Eduardo Fernandez, Darren Kinney, Kevin W. Hollander and Sangram Redkar	
<b>SPEXOR: Towards a Passive Spinal Exoskeleton</b> . . . . .	325
L. De Rijke, M. Näf, C. Rodriguez-Guerrero, B. Graimann, H. Houdijk, J. van Dieën, K. Mombaur, M. Russold, N. Sarabon, J. Babič and D. Lefeber	

**Autonomous Soft Exosuit for Hip Extension Assistance** . . . . . 331  
 Nikos Karavas, Jinsoo Kim, Ignacio Galiana, Ye Ding, Adam Couture,  
 Diana Wagner, Asa Eckert-Erdheim and Conor Walsh

**Comparison of Ankle Moment Inspired and Ankle Positive Power  
 Inspired Controllers for a Multi-Articular Soft Exosuit  
 for Walking Assistance** . . . . . 337  
 Martin Grimmer, Brendan T. Quinlivan, Sangjun Lee, Philippe Malcolm,  
 Denise M. Rossi, Christopher Siviý and Conor J. Walsh

**Biomechanical Analysis and Inertial Sensing of Ankle Joint While  
 Stepping on an Unanticipated Bump** . . . . . 343  
 Taira Miyatake, Sangjun Lee, Ignacio Galiana, Denise M. Rossi,  
 Christopher Siviý, Fausto A. Panizzolo and Conor J. Walsh

**A Novel Approach to Increase Upper Extremity Active Range  
 of Motion for Individuals with Duchenne Muscular Dystrophy  
 Using Admittance Control: A Preliminary Study** . . . . . 349  
 Madeline C. Corrigan and Richard A. Foulds

**Modulation of Knee Range of Motion and Time to Rest in Cerebral  
 Palsy Using Two Forms of Mechanical Stimulation** . . . . . 355  
 Peter A. Michael, Ghaith J. Androwis and Richard A. Foulds

**Training Response to Longitudinal Powered Exoskeleton Training  
 for SCI** . . . . . 361  
 A. Ramanujam, A. Spungen, P. Asselin, E. Garbarini, J. Augustine,  
 S. Canton, P. Barrance and G. F. Forrest

**Adaptive Classification of Arbitrary Activities Through Hidden  
 Markov Modeling with Automated Optimal Initialization** . . . . . 367  
 Chris T. M. Baten, Thijs Tromper and Leonie Zeune

**Design and Motion Analysis of a Wearable and Portable  
 Hand Exoskeleton** . . . . . 373  
 Matteo Bianchi, Francesco Fanelli, Roberto Conti, Lapo Governi,  
 Enrico Meli, Alessandro Ridolfi, Andrea Rindi, Federica Vannetti  
 and Benedetto Allotta

**Nitiglove: Nitinol-Driven Robotic Glove Used to Assist Therapy  
 for Hand Mobility Recovery** . . . . . 379  
 C. Jiménez, R. Mora, J. Pérez and K. Quirós

**3D Printed Arm Exoskeleton for Teleoperation  
 and Manipulation Applications** . . . . . 385  
 Pierre Letier, Gonzalo Rodriguez, Guillaume Fau, Shashank Govindaraj,  
 Torsten Siedel, Jeremi Gancet and Michel Ilzkovitz

<b>Musculoskeletal Simulation of SOLEUS Ankle Exoskeleton for Countermeasure Exercise in Space . . . . .</b>	391
Moonki Jung, Guillaume Fau, Pierre Letier, Uwe Mittag, Jochen Zange, Jörn Rittweger and Arnaud Runge	
<b>Human Gait Feature Detection Using Inertial Sensors Wavelets. . . . .</b>	397
S. Glowinski, A. Blazejewski and T. Krzyzynski	
<b>On the Importance of a Motor Model for the Optimization of SEA-driven Prosthetic Ankles . . . . .</b>	403
Tom Verstraten, Glenn Mathijssen, Joost Geeroms, Louis Flynn, Bram Vanderborght and Dirk Lefeber	
<b>Assessment of a 7-DOF Hand Exoskeleton for Neurorehabilitation . . . .</b>	409
Kevin Abbruzzese and Richard Foulds	
<b>Improving the Standing Balance of People with Spinal Cord Injury Through the Use of a Powered Ankle-Foot Orthosis . . . . .</b>	415
Amber Emmens, Iolanda Pisotta, Marcella Masciullo, Edwin van Asseldonk and Herman van der Kooij	
<b>Transparent Mode for Lower Limb Exoskeleton . . . . .</b>	421
R. Mendoza-Crespo, R. Soto and J. L. Pons	
<b>Human-Robot Mutual Force Borrowing and Seamless Leader-Follower Role Switching by Learning and Coordination of Interactive Impedance . . . . .</b>	427
Ker-Jiun Wang, Mingui Sun and Zhi-Hong Mao	
<b>Upper Limb Exoskeleton Control for Isotropic Sensitivity of Human Arm . . . . .</b>	433
Rok Goljat, Tadej Petrič and Jan Babič	
<b>AUTONOMYO: Design Challenges of Lower Limb Assistive Device for Elderly People, Multiple Sclerosis and Neuromuscular Diseases . . . .</b>	439
A. Ortlieb, M. Bouri and H. Bleuler	
<b>Passive Lower Back Moment Support in a Wearable Lifting Aid: Counterweight Versus Springs. . . . .</b>	445
Ralph J. L. Macke, Arvid Q. L. Keemink and Arno H. A. Stienen
