About this Series

Sustainable Infrastructure impacts our well-being and day-to-day lives. The infrastructures we are building today will shape our lives tomorrow. The complex and diverse nature of the impacts due to weather extremes on transportation and civil infrastructures can be seen in our roadways, bridges, and buildings. Extreme summer temperatures, droughts, flash floods, and rising numbers of freeze-thaw cycles pose challenges for civil infrastructure and can endanger public safety. We constantly hear how civil infrastructures need constant attention, preservation, and upgrading. Such improvements and developments would obviously benefit from our desired book series that provide sustainable engineering materials and designs. The economic impact is huge and much research has been conducted worldwide. The future holds many opportunities, not only for researchers in a given country, but also for the worldwide field engineers who apply and implement these technologies. We believe that no approach can succeed if it does not unite the efforts of various engineering disciplines from all over the world under one umbrella to offer a beacon of modern solutions to the global infrastructure. Experts from the various engineering disciplines around the globe will participate in this series, including: Geotechnical, Geological, Geoscience, Petroleum, Structural, Transportation, Bridge, Infrastructure, Energy, Architectural, Chemical and Materials, and other related Engineering disciplines.

Preface

Toward building sustainable and longer civil infrastructures, the engineering community around the globe continues undertaking research and development to improve existing design, modeling, and analytical capability. Such initiatives are also the core mission of the Soil-Structure Interaction Group in Egypt (SSIGE) to contribute to the ongoing research toward sustainable infrastructure. This conference series “GeoMEast International Congress and Exhibition” is one of these initiatives.

Ancient peoples built their structures to withstand the test of time. If we think in the same way, our current projects will be a heritage for future generations. In this context, an urgent need has quickly motivated the SSIGE and its friends around the globe to start a new congress series that can bring together researchers and practitioners to pursue “Sustainable Civil Infrastructures.” The GeoMEast 2017 is a unique forum in the Middle East and Africa that transfers from the innovation in research into the practical wisdom to serve directly the practitioners of the industry.

More than eight hundred abstracts were received for the first edition of this conference series “GeoMEast 2017” in response to the Call for Papers. The abstracts were reviewed by the Organizing and Scientific Committees. All papers were reviewed following the same procedure and at the same technical standards of practice of the TRB, ASCE, ICE, ISSMGE, IGS, IAEG, DFI, ISAP, ISCP, ITA, ISHMII, PDCA, IUGS, ICC, and other professional organizations who have supported the technical program of the GeoMEast 2017. All papers received a minimum of two full reviews coordinated by various Session Chairs and supervised by the volumes editors through the Editorial Manager of the SUCI “Sustainable Civil Infrastructure” book series. As a result, 15 volumes have been formed of the final +320 accepted papers. The authors of the accepted papers have addressed all the comments of the reviewers to the satisfaction of the Session Chairs, the volumes editors, and the proceedings editor. It is hoped that readers of this proceedings of the GeoMEast 2017 will be stimulated and inspired by the wide range of papers written by a distinguished group of national and international authors.

Publication of this quality of technical papers would not have been possible without the dedication and professionalism of the anonymous papers reviewers. The names of these reviewers appear in the acknowledgment that follows. For any additional reviewers whose names were inadvertently missed, we offer our sincere apologies.

We are thankful to Dr. Hany Farouk Shehata, Dr. Nabil Khelifi, Dr. Khalid M. ElZahaby, Dr. Mohamed F. Shehata, and to all the distinguished volumes editors of the proceedings of the GeoMEast 2017. Appreciation is extended to the authors and Session Chairs for their significant contributions. Thanks are also extended to Springer for their coordination and enthusiastic support to this conference. The editors acknowledge the assistance of Ms. Janet Sterritt-Brunner, Mr. Arulmurugan Venkatasalam in the final production of the 15 edited volumes “Proceedings of GeoMEast 2017”.

Contents

Deciding for Remediation of the Seepage Barrier System in Foundation of an Earthfill Dam Based on the Monitoring Data and Numerical Analysis	1
Hamed Farshbaf Aghajani	
Nonlinear Seismic Response of Concrete Gravity Dams	13
Djamel Ouzandja, Boualem Tiliouine, and Toufiq Ouzandja	
Applied GIS to the Monitoring of Building Work Case Study: Construction of 2000 Houses in Ghadames-Lybia	22
Samir Medhioub, Mohamed Baklouti, and Slah Bouraoui	
Stability Analysis of Souk-Tleta Earth Dam, North Algeria	32
Ryma Afri, Saida Hadj Abderrahmane, Lynda Djerbal, and Smail Gabi	
Static Liquefaction Analysis of the Limonar Tailings Dam in Peru	41
Herbert M. Maturano Rafael and Celso Romanel	
Probabilistic Seismic Hazard and Dynamic Stability Assessment of a Tailings Dam Located in Jamaica	57
Frank Perez and Celso Romanel	
Analysis and Recovery Proposal for Erosion Process Located in the City of Planaltina-GO	72
Rideci Farias, Rhael Maycon Noronha Ribeiro, Haroldo Paranhos, Itamar de Souza Bezerra, and Roberto Pimentel	
Soil Structure Interaction Studies with Use of Geosynthetics in Soils Beneath Footings	85
R. Shivashankar, Nalini E. Rebello, V.R. Sastry, and B.R. Jayalekshmi	
A <i>Posteriori</i> Error Estimation for the Non-associated Plasticity Drucker-Prager Model with Hardening	98
Dao Duy Lam	

Analysis of Structural Behaviour of Thick Composite Laminates on an Elastic Foundation Using Efficient Higher-Order Theory	110
Mokhtar Bouazza, Tawfiq Becheri, and Abderrahmane Boucheta	
3D Numerical Simulation of the Goaf Due to Large-Scale Longwall Mining	121
Samar S. Ahmed, Marwan AlHeib, Yann Gunzburger, and Vincent Renaud	
A Suggested Model Using Quantitive and Qualitative Parameters for Cost Engineering of Mechanically Stabilised Earth Walls in Egypt	132
Joseph Meadows and John Erian	
Influence of Asphalt Mixture Ageing and Lowered Laboratory Compaction Rate on Stiffness and Cracking Behavior	154
Pavla Vacková, Jan Valentin, and Adriana Kotoušová	
Numerical Study of the Failure Surface in Granular Soil Under Two Closely Spaced Strip Footings	165
Assma Benbouza, Liela Arabet, and Khelifa Abbeche	
Evaporation Rate Dependence with Saturation Degree	173
Houcem Trabelsi	
Comparative Analysis of a Deep Excavation in a Clays Sequence in Bogota City, with an Emphasis on FEM and Auscultation from the View Point of the Soil-Structure Interaction	180
Lucero Amparo Estevez Rey	
Assessment of Granular Soil Failure at the Water Borehole Depth in South Eastern Nigeria by Discrete and Finite Element Methods	195
Kennedy C. Onyelowe, O.A. Ubachukwu, O.C. Ikpemo, and F.O. Okafor	
Effect of NBR-Waste on Rheological Properties of Modified Bitumen and Mechanical Characteristics of the Asphalt Mix	203
Khedoudja Soudani, Véronique Cerezo, and Smail Haddadi	
Numerical Check of the Meyerhof Bearing Capacity Equation for Shallow Foundations	214
Stefan Van Baars	
Utilization of Weathered Rock Mass as the China Three Gorges Dam Foundation	227
Shirong Xiao, Guodong Zhang, and Qingjun Zuo	
Displacement Assessment of Rock Socketed Shafts: A Numerical Approach	238
Asmaa M.H. Mahmoud and Ahmed M. Samieh	

Analysis and Modelling of Stiffened Slab Foundation on Expansive Soils 250
 Mohamed A. Shams, Mohamed A. Shahin, and Mostafa A. Ismail

Derivation of the Incremental Stress-Strain Relations for Expansive Soils and Implementation into the Boundary Element Method 262
 Jamila El Brahmi and Mimoun Zoukaghe

The Behaviour of Shallow Foundation Near Slope Under Inclined Loading 275
 Messaoud Baazouzi, Mekki Mellas, Djamel Benmeddour, and Abdelhak Mabrouki

Case Study About Erosion in Elmo Serejo Avenue, Taguatinga/Federal District – Brazil 287
 Mariane Rodrigues da Vitória, Rideci Farias, Haroldo Paranhos, Itamar de Souza Bezerra, and Roberto Pimentel de Sousa Júnior

Performance of Shallow Foundation Overlaying Cavernous Limestone 302
 Ahmed M. El-Tohamy

Numerical Investigations on Lateral Load Response of Fin Piles 317
 K.V. Babu and B.V.S. Viswanadham

Experiences with Tip Post Grouted Drilled Shafts in China 330
 Zhihui Wan and Guoliang Dai

Analysis on Post-peak and Creep Mechanical Behavior of Highly-Weathered Rock 344
 Yinghua Tan and Qian Zhang
