ACKNOWLEDGMENTS

Producing any book is never the work of just one or even two people, but reflects the contributions of countless colleagues, friends, and supporters. We are grateful to have benefited from the support of the National Science Foundation, which provided the resources necessary to conduct the fieldwork that tested and refined the organic public engagement methodology.¹ The editors and reviewers at *Public Understanding of Science* were also vital in developing the first iteration of the methodology. While this book is a dramatic expansion on that article and further improvement on the methodology, we also found a few small sections of that original essay were especially useful at key points in the book. A highly attentive reader familiar with the original article will find a duplicated sentence here or there, scattered throughout the book. We are grateful that the publication agreement with the journal and its publisher (SAGE) permitted such use.

A number of colleagues were also essential to the maturation of this project. We are grateful to David Berube at North Carolina State University for inviting one of the authors (Pat Gehrke) to develop and run the public engagement events we discuss in Chaps. 6 and 7, as well as for his input on the earliest articulations of the organic public engagement methodology. We are also indebted to the work of two graduate research assistants who worked as coders on that study: Matthew Boedy and Jonathan Maricle. Pat would also like to thank John Stone, who provided many excellent conversations during his time with Michigan State University's Center for the Study of Standards in Society.

Finally, none of our work would be possible without the support of our department, college, and university. The University of South Carolina has been supportive of this work, and we especially thank the College of Arts and Sciences for providing additional funding that brought this project through its final months of development.

NOTE

1. National Science Foundation Grant: Nanotechnology Interdisciplinary Research Team in Intuitive Toxicology, #06-595.
