This series focuses on the subject of measurements and indicators of children's well being and their usage, within multiple domains and in diverse cultures. More specifically, the series seeks to present measures and data resources, analysis of data, exploration of theoretical issues, and information about the status of children, as well as the implementation of this information in policy and practice. By doing so it aims to explore how child indicators can be used to improve the development and the well being of children.

With an international perspective the series will provide a unique applied perspective, by bringing in a variety of analytical models, varied perspectives, and a variety of social policy regimes.

Children's Well-Being: Indicators and Research will be unique and exclusive in the field of measures and indicators of children's lives and will be a source of high quality, policy impact and rigorous scientific papers.

Acknowledgements

The study on which this book is based is the result of contributions from many people. First of all, it is important to acknowledge the 61,000 children in 18 countries around the world who were willing to answer questionnaires about their views and feelings about their lives, without which none of this work would be possible. Thanks are also due to the schools, educational authorities and other organisations who facilitated the survey in each country. The Children's Worlds project is a collaboration between teams of researchers and so this book is a joint product of the work of many researchers who designed and conducted the survey in each country; as well as a small core group of researchers who have worked jointly to develop the project since its inception. I would like to personally thank Jonathan Bradshaw and Larissa Pople for their very helpful comments on draft chapters of the book; and Mali, Joe and Tom for their support and encouragement. Finally it is important to acknowledge the funding provided for this project by the Jacobs Foundation who continue to support this research project to develop and grow.
