The International Association for Media and Communications Research (IAMCR) has been, for over 50 years, a focal point and unique platform for academic debate and discussion on a variety of topics and issues generated by its many thematic Sections and Working groups (see <http://iamcr.org/>) This new series specifically links to the intellectual capital of the IAMCR and offers more systematic and comprehensive opportunities for the publication of key research and debates. It will provide a forum for collective knowledge production and exchange through trans-disciplinary contributions. In the current phase of globalizing processes and increasing interactions, the series will provide a space to rethink those very categories of space and place, time and geography through which communication studies has evolved, thus contributing to identifying and refining concepts, theories and methods with which to explore the diverse realities of communication in a changing world. Its central aim is to provide a platform for knowledge exchange from different geo-cultural contexts. Books in the series will contribute diverse and plural perspectives on communication developments including from outside the Anglo-speaking world which is much needed in today's globalized world in order to make sense of the complexities and intercultural challenges communication studies are facing.

FOREWORD—THE ERA OF THE BOTH

It is my pleasure and honor to welcome you, reader of *Networks, Movements & Technopolitics in Latin America* to these first pages of the book. I can only tempt you to continue reading this book, in any way you deem fit, as I believe that it will be a pleasant and enriching experience.

I believe this book raises a set of significant questions about our contemporary world, and stimulates an in-depth reflection about participation, activism, social movements and democracy. One issue, I believe, merits our special attention. This is the paradox of the growing levels of participation in a variety of societal fields and the decreasing levels of control over the levers of societal power. Often, this paradox is mediated and “solved” through a defense (or a critique) of either utopian or dystopian perspectives, where this dys/utopianism is sometimes related to communication technologies, or in other cases to citizen or civil society powers, or to state or company powers. I believe we need to heed this paradox much more *as* a paradox, as a *seemingly* contradictory statement. We need to take both components of the paradox serious, acknowledge that there is a history of coexistence combined with a present-day intensification, and scrutinize how they dynamically and contingently relate to each other. In other words, we need to gain a better understanding of how we now live in the era of the both.

If we apply a *Longue Durée* approach (Braudel 1969) to the establishment and growth of democracy, we can hardly deny that we have come a long way. Of course, the history of our diverse democratization processes

is characterized by continuities and discontinuities, dead-ends, contradictions, and horrible regressions. But what Mouffe (2000: 1–2) called the “democratic revolution” “led to the disappearance of a power that was embodied in the person of the prince and tied to a transcendental authority. A new kind of institution of the social was hereby inaugurated in which power became ‘an empty place’.” Even if we zoom in on the twentieth and twenty-first century, it is hard not to see the differences with the past. It is equally hard to ignore that the history of more than 200 years of democratic revolution has brought us more participation, in a variety of ways and levels.

Of course, it makes sense to clarify what I mean with (more) participation, as this is a slippery notion—an empty signifier—given meaning by two structurally different and competing approaches (see Carpentier 2016, for a more detailed discussion). What I have labeled the sociological approach defines participation as *taking part* in particular social processes, which is a very open and broad perspective, that tends to conflate interaction and participation. We find this approach, for instance, in the field of cultural participation, where a museum visit is defined as a form of participation. The second approach towards participation—the political studies approach—uses a more restrictive perspective, defining participation as a process of *power-sharing* in particular decision-making processes. Interaction, however socially and politically relevant it is, then becomes distinguishable from participation, allowing for a more fine-grained analysis of participation. To return to my museum visit: In the political studies approach, attending a museum is seen as a form of art access, allowing for interaction with cultural artefacts and other texts, a particular cultural institution, and other visitors. But, as the museum visit does not allow a visitor to co-decide on the creation, or display, of these cultural artefacts, or on the policies of that cultural institution, it is not a form of participation. This second approach, which is also the one I prefer, allows us to notice and validate practices that do allow for (arts) participation, as they have been, for instance, developed by the community arts movement (Binns 1991; De Bruyne and Gielen 2011). Somehow, the work of Boal (1979) also comes to mind...

Even if we take the second approach as our guide, with its more narrow definition of participation as power-sharing, we still have to acknowledge that the democratic revolution has brought more participation, even though a more qualified and careful analysis becomes

necessary. Here I want to refer to Jenkins's words: "This is in part why I see participation more and more in relational rather than absolute terms—a matter of degree rather *than* of difference. So yes, all culture is in some sense participatory, but the more hierarchical a culture is, the less participatory it becomes. I am today more likely to talk about a shift towards 'a more participatory culture'." (Jenkins in Jenkins, Ito and boyd 2015: 22) If we look at the histories of media participation (Ekström, et al. 2011; Carpentier and Dahlgren 2014), we can identify several key moments where citizens' communication rights have been structurally strengthened, discursively (e.g., the development of the concept of communication rights in the first place) and materially (by the increased availability of communication technologies).

Of course, this evolution towards more participation has not remained restricted to the media field. Also the relationships between citizens and their political leaders, between employees and employers, and, more in general, between ordinary people and the fluid assemblage of societal elites, has changed over the past decades, sometimes in societal fields that would not immediately come to mind. Take, for instance, the domain of health, where patients have become more empowered in the past decades, with the development of patient rights and other legal frameworks (e.g., euthanasia laws) as a result. If we aggregate these participatory practices across the many different societal fields in which they are located, we can find support for the idea that power has become more decentralized, and that this decentralization is sometimes accepted, and even institutionalized, and in other cases can be wrestled from societal elites by a combination of tactics, struggles, resistances, disobediences, and activisms.

Of course, I do not want to imply that these changes have led to societies that are characterized by omnipresent power balances and equalities, where leadership, expertise and ownership have become fully democratized, where difference is acknowledged and respected, without it resulting in the capacity to dominate others. Full participation, as Pateman (1970: 71) labeled it, or maximalist participation as I prefer to call it, has not been achieved on a large scale, even though there are some maximalist participatory Temporary Autonomous Zones (Bey 1985) throughout the world. I also do not want to imply that the present state of democracy, with its minimalist levels of participation, has not been paid dearly, with the pain, blood and tears of the generations that came before us, and is still costing contemporary generations a lot in

order to maintain the current participatory intensities. And finally, I also do not want to claim that the democratic revolution is a merely linear historical process, that will necessarily and unabatingly continue throughout time, eventually bringing us at the gates of a participatory heaven. Whatever has been gained, can still be lost. To use Enwezor et al.'s (2002) words: Democracy is unrealized, it is an horizon that is never reached, and that serves a crucial purpose as ideological reference point. But there is also no guarantee that we will continue heading towards this horizon, as we might have set out on a course towards a much darker future.

This darker side merits our attention, also because it is not situated in a distant future. Arguably, the (stronger) presence of minimalist participation coexists—in the era of the both—with a series of undemocratic forces, that centralize power. Here we should keep in mind that war and violence are opposites of democracy. Some of the armed conflicts, and the structural violence they encompass, have caused intense suffering, but also structural disruptions of democratic practices. Armed conflicts, such as the war in Afghanistan, the civil wars in Iraq and Syria, and the drug war in Mexico—to mention only the most bloody armed conflicts of today—create large enclaves where democracy is suspended, and where participation ceases to be a prime concern, as it is replaced by mere survival. But these undemocratic forces do not remain contained to the enclaves that I have just mentioned (and to the many other medium-intensity conflicts, for instance, on the African continent). Not only are many countries from the northern hemisphere military involved in these armed conflicts, these conflicts are also imported and transported to other parts of the world, where the involved states (in the northern hemisphere), their populations, and foreign fighters (often labeled terrorists) become involved in a downward spiral of discrimination, oppression, violence, destruction, and death. One component of this process is captured by Agamben's (2003) argumentation that we are living in the state of exception, where civil and human rights are curtailed in the name of security. Another component is the rise and mainstreaming of antagonistic xenophobic, racist, and nationalist ideologies in democratic states, combined with calls for strong leadership, that pave the way for populist and authoritarian regimes, for the legitimation of corruption and other forms of unethical behavior, and for the politics of fear (see, e.g., Wodak 2015).

This also has theoretical consequences for our thinking about participation, because it raises questions about the instrumentalization of participation and the hijacking of participatory techniques by non-participatory forces. How to handle situations where authoritarian and intrinsically undemocratic leaders use participatory tools to manufacture consent—a concept I borrow from Herman and Chomsky (1988)—or to mobilize populations for undemocratic purposes? What to think about radical right-wing groups (Caiani and Parenti 2013) that use the online to live out their nationalist and racist fantasies in ways that make use of participatory techniques, at least accessible to the members of these groups, and to those who are ideologically aligned with them? As argued elsewhere (Carpentier 2017: 96), this brings us to the distinction between procedural and substantive participation, which is inspired by the difference between procedural and substantive democracy, or between “rule-centered and outcome-centered conceptions of democracy” (Shapiro 1996: 123). In parallel with these concepts, we can distinguish between procedural and substantive participation, where procedural participation refers to the mere use of participatory techniques, while substantive participation refers to the necessary embedding of these participatory techniques in the core values of democracy, especially those of human rights and (respect for) societal diversity.

If we return to the role of communication technologies in the era of the both, we have to acknowledge that they are an integrative part of the two constitutive components of this era of the both. This book, with its ambition to move beyond the online/offline divide and to avoid the trap of digital utopianism, which artificially separates the “virtual” from the “real,” allows us to reflect better about how communication technologies, more than before, span the both. Surveillance technologies coexist with sousveillance technologies, black propaganda with dialogical communication, media legitimations of war and violence with pacifist messages, celebrations of bigotry with respect for diversity, sealed-off media empires with maximalist participatory media platforms, spirals of silence with practices of voice, symbolic annihilations with the politics of presence, media-induced amnesia with deep-rooted historical awareness, the defense of the status-quo with the loud propagation that another world is possible.

This leaves us with two final questions: What is the role of the critical intellectual in the era of the both, and can we avoid the scale being (further) tipped into (what I consider to be the) wrong direction? The

era of the both is characterized by increasing levels of diversity, but this diversity also includes the uncanny combination of the democratic and the undemocratic in one glocal assemblage. Which tactics should be deployed by those actors who are committed to what Mouffe (1988: 42) has called the “deepen[ing of] the democratic revolution” and what Giddens (1994: 113) labeled the “democratisation of democracy?”

These are questions that merit more attention than what I accord them here. But to give a fraction of an answer: I would like to argue that there is a strong need for the deployment of a double tactic, or better, two sets of tactics. One set of tactics consists out of the radically critical and radically contextualized analyses of the current problematic state of representative liberal democracy—one interesting example is Van Reybrouck’s (2016) critique of elections, but many others exist, and many more are needed—and the equally problematic state of the capitalist economies entangled with our representative liberal democracies. The second set of tactics is more difficult to put into practice, as it is a more generative approach, grounded in the critiques that result from the first set of tactics. This second set of tactics consists out of the further development of a participatory-democratic ideology. This ideology needs to articulate a participatory communicational ethics, a strong commitment to agonism—or in other words, to the democratic taming of conflict without denying it—and clear articulations of democratic leadership, democratic ownership, and democratic expertise (see Carpentier 2017), among many other elements.

In an intellectual landscape where critical intellectuals are dispersed throughout many regions, institutions, academic disciplines, and other frameworks of intelligibility, collaboration becomes a requirement. For that reason, I would argue that this double tactic has to be grounded in a global and multivoiced project that uses the strategy of modularity, where sub-networks of intellectuals collaborate within their disciplines and fields, in order to build ideological modules grounded in their expertise, in combination with interdisciplinary articulatory practices that connect and integrate these different modules into one counter-hegemonic participatory-democratic project (see Carpentier 2014 for a more developed argument). This book, with its broad geographical span, with its commitment to intercontinental dialogue and with its search for ways to deepen democracy and to intensify contemporary participatory levels, is, in my very humble opinion, one of the contributions towards the establishment of this new republic of letters.

EDITORS AND CONTRIBUTORS

About the Editors

Francisco Sierra Caballero is Senior Researcher and Professor of Communication Theory from the Department of Journalism at the University of Seville, Spain. He is also Director of the Interdisciplinary Research Group on Communication, Politics and Social Change (www.compoliticas.org) and Editor of the Journal of Studies for Social Development of Communication (REDES.COM) (www.revista-redes.com). He is President of the Latin Union of Political Economy of Information, Communication and Culture (www.ulepicc.org). He has written over 20 books and more than 50 scientific articles in journals of impact. Furthermore, he has been professor at prestigious universities and research centers in Europe and Latin America.

Tommaso Gravante is Postdoctoral Fellow at the Center for Interdisciplinary Research in the Sciences and Humanities (CEIICH), National Autonomous University of Mexico. More generally, his work explores the role of emotions in social movement and protest, and collective action and social change. Tommaso is author of *Cuando la gente toma la palabra. Medios digitales y cambio social en la insurgencia de Oaxaca* (CIESPAL, 2016).

Contributors

Alejandro Barranquero Carretero is Assistant professor at the Department of Journalism and Audiovisual Communication in Universidad Carlos III de Madrid where he teaches research methodologies, theory, and history of communication. His research lays at the intersection of communication, citizenship and social change, including insights to communication for social change, community and citizen media, communication strategies by NGOs and social movements, and critical perspectives on media literacy. He is the president of the Research Association in Community, Alternative and Participatory Communication-RICCAP (www.riccap.org) and permanent member of the research group Dialectic Mediation of Social Communication (MDCS) at Universidad Complutense de Madrid (www.ucm.es/mdcs).

Marcela Canavarro is Journalist, media-activist and Ph.D. candidate in Digital Media (University of Porto). She has a Master in Communication & Culture (UFRJ) with expertise in Technologies of Communication. She researches information diffusion on social networks for political mobilization, with focus on the so-called Journeys of June (Brazil, 2013). In this research, she crosses digital and traditional methods such as network analysis, computational processing of Facebook data and questionnaires. She is also part of the research group Communication Networks & Social Change at the Internet Interdisciplinary Institute (IN3) at Universitat Obierta de Catalunya (UOC) and collaborates with Inesc-Tec (U.Porto).

César Augusto Rodríguez Cano is Professor at the Department of Communication and Design, Universidad Autónoma Metropolitana unidad Cuajimalpa in Mexico City, and holds a Ph.D. in Social and Political Sciences from the Universidad Nacional Autónoma de México. He was a Postdoctoral Researcher at Universidad Iberoamericana and a Visiting Graduate Researcher at University of California Los Angeles. His research has focussed mainly in studying political culture on social media, cyberactivism, new media ecology, and digital methods with special interest in Social Network Analysis.

Nico Carpentier is Professor in Media and Communication Studies at the Department of Informatics and Media of Uppsala University. In addition, he holds two part-time positions, those of Associate Professor

at the Communication Studies Department of the Vrije Universiteit Brussel (VUB—Free University of Brussels) and Docent at Charles University in Prague. Moreover, he is a Research Fellow at the Cyprus University of Technology and Loughborough University. His most recent book is *The Discursive-Material Knot: Cyprus in Conflict and Community Media Participation*, published by Peter Lang in 2017.

Dr. Rodolfo Armando Castiblanco Carrasco is an independent researcher and occasional professor at the Social Sciences at the Universidad Distrital Francisco José de Caldas, Bogotá, Colombia. He obtained his doctoral degree in social anthropology from University of los Andes, Bogotá, Colombia. His research interests are in the fields of digital anthropology, hacktivism, appropriation of technology in global south, education, and pedagogy.

David Luquetta-Cediel, Ph.D. Anthropologist, Doctor of Social Sciences. Principal investigator in several projects with regional and national impact. He is currently a full-time teaching researcher in the Social Communication—Journalism Programme of the Autonomous University of the Caribbean and the leader of the communication and regional research group in the same department.

Dr. Jean-Marie Chenou is an Assistant Professor at the Department of Political Science at the University of los Andes, Bogotá Colombia and a member of the Centre for International Studies. He obtained his Ph.D. in Political Science from the University of Lausanne. He is specializing in Internet governance and the regulation of digital markets.

Ana Lucia Nunes de Sousa is a Ph.D. student in communication and journalism at the Autonomous University of Barcelona (Spain)/Federal University of Rio de Janeiro (Brazil), and is a CAPES (Brazil) scholarship student. She also has a degree in social communication, a postgraduate degree in hypermedia and in creative documentary, as well as a Master's in communication and culture. Her research and professional experience focus on community media, audio-visual, the Internet and social movements.

Miren Gutierrez (@gutierrezmiren) is a Professor of Communication and Director of the postgraduate program “Data Analysis, Research and Communication” at the University of Deusto, Spain. She is also a Research Associate at the Overseas Development Institute of London, where she develops data-based research projects around development

issues, and at DATACTIVE of Amsterdam. She is also a trainer at the Thomson Reuters Foundation. Her work explores how people take action, mobilize and organize via software and data. She holds a Ph.D. in Communication Sciences of the University of Deusto.

Stefania Milan (stefaniamilan.net) is Associate Professor of New Media at the University of Amsterdam, and Associate Professor (II) of Media Innovation at the University of Oslo. She is also the Principal Investigator of the DATACTIVE project (StG-2014_639379), exploring the evolution of citizenship and participation vis-à-vis datafication and massive data collection (data-activism.net). More generally, her work explores the intersection of digital technology, governance and activism. She holds a Ph.D. in political and social sciences of the European University Institute. Stefania is the author of *Social Movements and Their Technologies: Wiring Social Change* (Palgrave Macmillan, 2013), and coauthor of *Media/Society* (Sage, 2011).

Andrea Ricci holds a Master's degrees in European Studies from the College of Europe and a Ph.D. on Information and Communication Sciences from ULB in Brussels. His professional and academic interests are related to the role of communication and (open and secret source) intelligence in fields like crisis management, conflict analysis, risk analysis, early warning, scenario analysis, political mobilization, terrorism, and propaganda.

Elias Said-Hung, Ph.D. Researcher, consultant and Scrum Master Consultant with over 10 years professional experience in social media, digital media and ICT in education. Currently a Lecturer in the Education Faculty of the International University and a consultant at Con-Tacto Humano.

Nina Santos is a Ph.D. candidate in Communication at Université Panthéon-Assas. She has a Master in Communication and Contemporary Cultures, at Universidade Federal da Bahia (Brazil) and a Specialization in Communication and Politics, at the same university. Also has been working and researching in the field of political communication, e-democracy, political campaigns, social media marketing, social media monitoring since 2008.

Jan Servaes, Ph.D. is Editor-in-Chief of the Elsevier journal “Telematics and Informatics: An Interdisciplinary Journal on the Social Impacts of New Technologies” (<http://www.elsevier.com/locate/tele>), and Editor of the Lexington Book Series “Communication, Globalization

and Cultural Identity” (<https://rowman.com/Action/SERIES/LEX/LEXCGC>), and the Springer Book Series “Communication, Culture and Change in Asia” (<http://www.springer.com/series/13565>). Servaes has taught International Communication and Communication for Social Change in Australia, Belgium, China, Hong Kong, the USA, The Netherlands, and Thailand, in addition to several teaching stints at about 120 universities in 55 countries. Servaes has undertaken research, development, and advisory work around the world and is the author of journal articles and books on such topics as international and development communication; ICT and media policies; intercultural communication; participation and social change; and human rights and conflict management. He is known for his “multiplicity paradigm” in “Communication for Development. One World, Multiple Cultures” (1999).

Emiliano Treré is Lecturer at Cardiff’s School of Journalism, Media and Cultural Studies (UK), and Research Fellow at the Center of Social Movements Studies of the Scuola Normale Superiore (Italy). He has published extensively on the challenges and the myths of media technologies for social movements and political parties. He is coeditor of “Social Media and Protest Identities” (Information, Communication & Society, 2015), “Latin American Struggles & Digital Media Resistance” (International Journal of Communication, 2015), and “From Global Justice to Occupy and Podemos: Mapping Three Stages of Contemporary Activism” (tripleC, 2017). His book is forthcoming with the Routledge Studies in Radical History and Politics.

Fig. 10.3	Hub pages show high <i>indegree</i> . This graph considers the 112 nodes that constitute the giant component of the 1-degree network. That means 68.7% of the total network (nodes size = indegree; nodes colors manually = hub pages in <i>black</i> and others pages in <i>gray</i>)	213
Fig. 10.4	Connectedness and Unity: hub pages play a relevant role in linking nodes at the 2-degree network’s giant component, which gathers 476 nodes (93.5% of the total network). Graph: directed network; gephi layout = Force Atlas 2; size nodes = indegree; nodes colors = strongly-connected ID (<i>black</i> represents the most connected nodes while <i>lighter gray</i> indicates the least connected nodes in the giant component). Data collected in October, 21, 2016	214
Fig. 10.5	Giant component’s most cohesive core (2-degree network). Network cohesiveness: some of the hub pages appear amongst the 51 nodes (10% of the total network) left in the giant component, when the highest k-core possible before the network completely disappears is applied (k-core = 9). Data collected in October, 21, 2016	216
Fig. 10.6	<i>O Mal Educado</i> ’s 3-degree ego sub-network (103 nodes) gathers 63.2% of the total 1-degree network (103 nodes) and 87% of all links, showing its relevance for information diffusion	217
