Éric Duchemin, Université du Québec à Montréal Institut des Science de  
Environnement, Montreal, Québec, Canada

Joe Nasr, Centre for Studies in Food Security, Ryerson University,  
Toronto, Ontario, Canada

This new *Urban Agriculture* Book Series at Springer is for researchers, professionals, policy-makers and practitioners working on agriculture in and near urban areas. Urban agriculture (UA) can serve as a multifunctional resource for resilient food systems and socio-culturally, economically and ecologically sustainable cities.

For the Book Series Editors, the main objective of this series is to mobilize and enhance capacities to share UA experiences and research results, compare methodologies and tools, identify technological obstacles, and adapt solutions. By diffusing this knowledge, the aim is to contribute to building the capacity of policy-makers, professionals and practitioners in governments, international agencies, civil society, the private sector as well as academia, to effectively incorporate UA in their field of interests. It is also to constitute a global research community to debate the lessons from UA initiatives, to compare approaches, and to supply tools for aiding in the conception and evaluation of various strategies of UA development.

The concerned scientific field of this series is large because UA combines agricultural issues with those related to city management and development. Thus, we propose an interdisciplinary Book Series where environmental sciences, agronomy, urban and regional planning, architecture, landscape design, economics, social sciences, soil sciences, public health and nutrition come together, recognizing UA's contribution to meeting society's basic needs, feeding people, structuring the cities while shaping their development. All these scientific fields are of interest for this Book Series. Books in this Series will analyze UA research and actions; program implementation, urban policies, technological innovations, social and economic development, management of resources (soil/land, water, wastes ...) for or by urban agriculture, are all pertinent here.

This Book Series will include a mix of edited, coauthored, and single-authored books. These books could be based on research programs, conference papers, or other collective efforts, as well as completed theses or entirely new manuscripts.

# Contents

<b>1</b>	<b>Relations Between Agriculture and the City in Europe and the Mediterranean .....</b>	<b>1</b>
	Christophe-Toussaint Soulard, Coline Perrin, and Elodie Valette	
<b>Part I Systemic Approaches of Urban-Agricultural Relations</b>		
<b>2</b>	<b>Food, Integrating Urban and Agricultural Dynamics in Pisa, Italy .....</b>	<b>15</b>
	Sylvie Lardon, Marie Houdart, Salma Loudiyi, Rosalia Filippini, and Elisa Marraccini	
<b>3</b>	<b>Logistic Issues and Impacts of Short Food Supply Chains: Case Studies in Nord – Pas de Calais, France .....</b>	<b>33</b>
	Amélie Gonçalves and Thomas Zeroual	
<b>4</b>	<b>Interactions Between Agriculture and the City: A Systemic Approach to Examine Sustainability in Meknes (Morocco) .....</b>	<b>51</b>
	Jean-Pierre Chery, Elodie Valette, Patrick Dugué, Pascale Philifert, and Abdellaoui El Hassane	
<b>5</b>	<b>Urban Farms Under Pressure: Cairo’s Dairy Producers, Egypt.....</b>	<b>73</b>
	Annabelle Daburon, Véronique Alary, Ahmed Ali, Mohamed El Sorougy, and Jean François Tourrand	
<b>Part II Methods and Tools to Design Sustainable Urban Food Systems</b>		
<b>6</b>	<b>An Ecological Footprint-Based Spatial Zoning Approach for Sustainable Metropolitan Agro-Food Systems .....</b>	<b>91</b>
	Dirk Wascher, Leonne Jeurissen, Jan-Eelco Jansma, and Michiel van Eupen	

<b>7</b>	<b>Food Cells and Food Nodes. Two New Concepts for Rethinking Traditional Urban and Food Planning Practices. The Case of Barcelona’s Metropolitan Region .....</b>	<b>111</b>
	Sonia Callau, Josep Montasell, and Andreu Vila	
<b>8</b>	<b>The Integration Between Mediterranean Cities and Agriculture in Local Projects. A Conceptual Framework .....</b>	<b>129</b>
	Salma Loudiyi, Christophe-Toussaint Soulard, Patricia Abrantes, Sylvie Lardon, Guilhem Mousselin, Pascale Scheromm, Elodie Valette, Ouassila Bendjaballah, and Françoise Jarrige	
<b>Part III Inventory of Changes in Urban Agriculture</b>		
<b>9</b>	<b>Innovative Commercial Urban Agriculture in the Paris Metropolitan Area .....</b>	<b>147</b>
	Christine Aubry and Anne-Cécile Daniel	
<b>10</b>	<b>Zero-Acreage Farming: Challenges and Opportunities for Urban Policies and Partnerships .....</b>	<b>163</b>
	Susanne Thomaier	
<b>11</b>	<b>The Emergence of Municipal Allotment Gardens in Greece in Times of Crisis. Governance Challenges for New Urban Gardening Practices.....</b>	<b>181</b>
	Theodosia Anthopoulou, Sofia Nikolaidou, Maria Partalidou, and Michael Petrou	
<b>12</b>	<b>The Proliferation of Collective Gardens in Lisbon (Portugal) and Montpellier (France): Urban Residents Demand and Municipal Support .....</b>	<b>201</b>
	Pascale Scheromm and Guilhem Mousselin	
<b>13</b>	<b>The Governance of Urban Agriculture and Multifunctional Land Use in the City of Zurich .....</b>	<b>219</b>
	Ingrid Jahrl and Otto Schmid	
	<b>Index.....</b>	<b>237</b>

# List of Figures

Fig. 2.1	Urban region of Pisa (Tuscany, Italy) (Source: Institute of Life Sciences; Tuscan region geographical database) .....	19
Fig. 2.2	Methodological itinerary of the ANR DAUME project .....	20
Fig. 2.3	Dynamics of land use in the urban area of Pisa between 1985 and 2011 (Source: Institute of Life Sciences, elaboration of Landsat data).....	21
Fig. 2.4	Surface of abandoned agricultural areas and urbanized areas developed on land that was previously agricultural or natural, arranged by the different municipalities of Pisa's urban area (Source: Institute of Life Sciences, elaboration of Landsat data).....	22
Fig. 2.5	Indicators of fragmentation in the surface area among 55 farms surveyed in 2012/2013 (Source: Institute of Life Sciences elaboration of ARTEA-LPIS data and 2013 survey). UAA stands for Usable Agricultural Area, forage farms were mainly livestock oriented farms .....	23
Fig. 2.6	Example of a Monte Pisano farm: diversification of agricultural activities (Source: R. Filippini, elaboration of survey data 2013).....	25
Fig. 2.7	Example of a Coltano (south of Pisa) farm: links between areas of activities (Source: R. Filippini, elaboration of data from surveys 2013) .....	26
Fig. 3.1	Location of the case studies (Source: Authors, based on INSEE datas and SIGALE® Nord – Pas-de-Calais) .....	40
Fig. 4.1	Globality of the system of interactions between cities and agriculture: (a and b) example of the separate elements of two systems, and (c) elements associated through a causal relationship .....	55
Fig. 4.2	The same structure applied to a different function from the system of interactions between cities and agriculture.....	56

Fig. 4.3	An example of the systematization of periurban land-use: the vagaries of Morocco's colonial period, and its consequences .....	57
Fig. 4.4	A balancing feedback loop: water reserves and irrigation .....	58
Fig. 4.5	A reinforcing feedback loop: water resources and the urban population.....	59
Fig. 4.6	Meknes and its surrounding region, the evolution of urbanization from 2001 to 2011 .....	60
Fig. 4.7	Meknes case study and its geographical environment, Fes and the Plain of Saïa .....	61
Fig. 4.8	The positive circles of anticipated benefits from Moroccan public development policies at the national level .....	63
Fig. 4.9	Land-use in the Meknes region at the beginning of the twenty-first century .....	65
Fig. 4.10	Expansion of urban construction (2013–2014) and associated roadways .....	66
Fig. 4.11	the system of interactions between the city of Meknes and local agriculture.....	68
Fig. 4.12	Examples of reinforcing and balancing feedback loops of a complex system of interactions between the city and agriculture .....	69
Fig. 5.1	Cairo satellite picture and research areas. In blue, urban area; in green, peri-urban areas.....	76
Fig. 5.2	Pictures from indoor livestock breeders: top left, calf on the ground floor of a house; top centre, Cairo buffalo farm; top right, farm entrance (40 adult buffalos and cows behind the door); bottom centre, dairy buffalo from Cairo; bottom right, straw truck between buildings in a Cairo informal area .....	79
Fig. 6.1	Ecological footprint (EF) shown as global and local hectares for London, Rotterdam City Region, Berlin, Milan, Ljubljana and Nairobi. Large dark circles refer to global hectares and small blue circles to local hectares showing the land requirements in terms of food production areas based on national accounts (Sources: global hectares according to Briggs 2011; local hectares various sources, see below) .....	93
Fig. 6.2	Bangkok Metropolitan Area (Thailand), Metropool Regio Den Haag-Rotterdam (MRDR) in The Netherlands and Seattle Metropolitan Areas (US) .....	95
Fig. 6.3	von Thünen's model: the central dot represents a city; dairy and market gardening; forests for fuel; grains and field crops; ranching; the area outside these rings represents wilderness where agriculture is not profitable (von Thünen 1826).....	97

Fig. 6.4	Application of the Metropolitan Foodscape Planner to the Rotterdam City Region (1.2 million inhabitants) and the OECD metropolitan area (+6.6 million people) showing the current dominant crop type.....	103
Fig. 6.5	Demand-Supply analysis for eight food groups of the Metropolitan Food Zone 2 (crops for plant-based food) for 1.2 million people (in hectares).....	103
Fig. 6.6	Demand-Supply analysis for eight food groups of the Metropolitan Food Zone 3 (crops for livestock farming) for 1.2 million people (in hectares).....	104
Fig. 6.7	Demand-Supply analysis for eight food groups of crops in Zone 4 (Transition) providing crops for plant-based food and livestock farming for 6.6 million people of the OECD region (in hectares) .....	105
Fig. 7.1	Situation of the Gràcia superblock (yellow square) in relation to the Vila de Gràcia (yellow area) and the city of Barcelona. © BCNecologia. Reproduced with permission.....	116
Fig. 7.2	Photos of the streets of the Gràcia superblock. 2.1 (Pictures by the Author 2015-03-24) .....	117
Fig. 7.3	Distribution of points of sale of fruits and vegetables in the Gràcia superblock. Each number represents a point of sale. The letters represent consumer cooperatives.....	122
Fig. 7.4	Ratio of urban cells to food cells in the case of the Gràcia superblock. The areas marked in yellow represent the ratio of agricultural space required needed to feed the inhabitants of the Gràcia superblock. The shipping distance of food from the 'Agricultural concentration system' (ACS) to 'Urban concentration systems' (UCS) is 11.4 km (Source: Author 2015) .....	124
Fig. 8.1	Case studies locations .....	133
Fig. 8.2	Illustration of the local projects identified on the five Mediterranean terrains .....	134
Fig. 9.1	A wide range of variables to characterize urban agriculture farms (Source: Daniel 2013).....	151
Fig. 9.2	An innovative farm producing mushrooms on coffee grounds: the U-Farm (with the kind authorisation of C Péchard UFarm) .....	152
Fig. 9.3	The professional background of 22 intra-urban UA project leaders .....	154
Fig. 9.4	Level of academic qualifications of 40 intra-urban UA project leaders .....	155
Fig. 10.1	Characteristics of the analysed ZFarming projects (n = 76).....	166

Fig. 10.2	Commercial and non-commercial rooftop farms. Top left: Brooklyn Grange (author's picture). Top right: The Lufa Farms' greenhouse (Design + Environment, www.flickr.com, CC-BY 2.0). Bottom left: Schaduf rooftop garden (Anna Galda). Bottom right: Graze the Roof (Sergio Ruiz for SPUR, www.flickr.com, CC-BY 2.0).....	167
Fig. 11.1	Timeline of the emergence of urban agriculture initiatives in Greece .....	185
Fig. 11.2	Location of the municipal gardens of the study .....	188
Fig. 11.3	Urban dweller's motives in the case of Thermi (pre-harvest period).....	190
Fig. 11.4	Urban dweller's motives in the case of Alexandroupolis (pre-harvest period).....	191
Fig. 12.1	The different types of collective gardens in Montpellier and Lisbon (Sources: pictures of Montpellier, Scheromm P. 2013; pictures of Lisbon, Mousselin G. 2013).....	205
Fig. 12.2	Map locating collective gardens in the city of Montpellier (Sources: picture IGN BD Ortho 2006, inventory Scheromm P. 2013) .....	207
Fig. 12.3	Map locating informal gardens and horticultural parks planned by the municipality of Lisbon (Sources: Lisbon municipal master plan 2012 and municipal data 2014; inventory Mousselin G. 2012–2014).....	209
Fig. 12.4	Actors system of collective gardens in Montpellier and Lisbon. One-way arrows connect gardens with the actors involved in their creation or management. Two-way arrows identify relationships between the different actors involved.....	211
Fig. 13.1	Land for farming and gardening within the city of Zurich (July 2007) (Source: Grün Stadt Zürich, personal communication).....	223

# List of Tables

Table 3.1	The possible worlds of production .....	39
Table 3.2	The chains studied .....	39
Table 3.3	Outlines the main characteristics of the four worlds, their logistics and sustainability .....	45
Table 5.1	Main variables describing farming systems in Cairo urban and peri-urban areas .....	77
Table 6.1	Data layers applied in the MFP model .....	98
Table 6.2	Calculations for the MFP zoning distances for the City Region and OECD Region of Rotterdam .....	100
Table 6.3	Breakdown of supply and demand based on CORINE LC – HSMU disaggregation for all three MFP-zones of Rotterdam City Region & OECD region .....	101
Table 7.1	Data for calculating needs for fruit and vegetables per inhabitant and year .....	120
Table 9.1	Number of projects according to the “technical system” typology .....	151
Table 10.1	Involved players in planning and construction of Gotham Greens’ computer controlled rooftop greenhouse and the community-based garden himmelbeet .....	173
Table 11.1	Profile of the people involved in the research .....	191
