Table of contents

1 Introduction	1
2 Preparation techniques – Making anatomical structures visible	3
3 Morphology of the plant body – Tried and tested for 400 million years	7
3.1 Growth forms and life forms	7
3.2 Parts of the stem and definition of bark terms	9
4 Cellular composition of the plant body	11
4.1 The individual cell	11
4.2 Meristematic initials – The source of new cells	12
4.3 The cuticula – Protection against dehydration	13
4.4 Epidermis – The skin of plants	14
4.5 Collenchyma – Local peripheral stability	16
4.6 Parenchyma cells – Storage and repair	17
4.7 Fibers and tracheids – Stabilization and water conduction	18
4.8 Sclereids in the bark – Extraordinary cell-wall thickening	20
4.9 Vessels – Water conduction	21
4.10 Cork cells – Defense against organisms, heat and cold	23
4.11 Sieve cells, sieve tubes and companion cells – Conduction of assimilates	24
4.12 Secretory cells – Defense	25
4.13 Intercellulars and aerenchyma – Air circulation within the plant	27
5 Structure of cell walls and cell contents	29
5.1 Principal cell-wall structure – Form and stability	29
5.2 Pits – Lateral contact between cells	31
5.3 Perforation plates – Axial contact between vessels	33
5.4 Helical thickenings – Special wall thickenings	34
5.5 Tyloses – Permanent interruption of water flow	35
5.6 Cell contents – Everything inside the cell wall	36
5.6.1 Nuclei in Protoplasts – Metabolic centers of plant cells	36
5.6.2 Plastids – Green, yellow and white bodies	37
5.6.3 Starch grains – Stored energy	38
5.6.4 Crystals in vacuoles – Regulators and metabolic waste	39
5.6.5 Stained substances within the stem – Defense	40
6 Primary, secondary and tertiary meristems	43
6.1 Primary meristems in apical zones – Initials of longitudinal and radial growth	45
6.1.1 Macroscopic aspect of primary meristems in apical shoots and roots – Grow higher, grow deeper	45
6.1.2 Apical shoot dynamics – Long and short shoots – Grow fast, grow slow	46
6.1.3 Shoot death and metamorphosis – The end of longitudinal growth: Twigs must die	47
6.1.4 Microscopic aspect of apical meristems of shoots and roots – Towards heaven and earth	49
6.1.5 From primary apical meristem to secondary lateral meristems in shoots – From longitudinal to radial growth	50
6.1.6 From primary apical meristem to secondary lateral meristems in roots – From longitudinal to radial growth	52
6.1.7 From primary apical meristem in shoots to roots in plants without cambium (monocotyledons)	53
6.1.8 From primary apical meristem of vascular spore plants in shoots to roots	55
6.1.9 Pericycle and endodermis – Separation of central cylinder and cortex	57
6.2 Secondary and tertiary meristems and radial growth – Cambium and cork cambium	58
6.2.1 Macroscopic aspect of radial growth and xylem coloration – Stems get thicker	58
6.2.2 Microscopic aspect of radial growth (conifers, dicotyle- donous plants and palm ferns) – An overview	61
6.2.3 Production and enlargement of new cells in the xylem of a thickening stem – The need for more and larger cells	62
6.2.4 Cell formation and differentiation in the xylem – The multifunctional stem center	63
6.2.5 Timing of xylem formation	67
6.2.6 Cell differentiation in the phloem – The multifunctional stem periphery	68
6.2.7 Formation of tertiary meristems, the cork cambium – A new skin	70
6.2.8 Life span and death of cells – Cells must die	73
6.3 Cambial variants – Phloem elements within the xylem	75
6.4 Intercalary meristems – Longitudinal growth far behind the tips of shoots and roots	78
7 Stem anatomical structures of major taxonomic units	81
7.1 Stem-forming fungi and algae	83
7.1.1 Sporophytes of fungi	83
7.1.2 Thalli and stems of brown algae	84
7.2 Mosses – The oldest living plants	85
7.3 Fern-like plants	87
7.3.1 Spikemosses, quillworts and clubmosses	87
7.3.2 Whisk ferns and moonworts	89

7.3.3 Horsetails	90	10.3 Eccentricity and irregular stem forms	153
7.3.4 Ferns	92	10.4 Reaction wood – Reaction to mechanical stress	155
7.4 Seed plants	96	10.4.1 Compression wood in conifers	156
7.4.1 Palm ferns	96	10.4.2 Tension wood in angiosperms	157
7.4.2 Ginkgoaceae	99	10.5 Cell collapse and lateral ray compression	159
7.4.3 Conifers	100	10.6 Cambial wounding – Callus formation, overgrowing of wounds	161
7.4.4 Gnetales	102	10.7 Prevention of wounds	163
7.4.5 Angiosperms – Monocotyledons and their growth forms	108	10.8 Resin and gum ducts	166
7.4.6 Angiosperms – Dicotyledons and their growth forms	114		
8 Evolution of stems	121	11 Coexistence of algae, fungi and vascular plants	169
8.1 Paleobotanic evidence of stems	121	11.1 Mycorrhizae – Coexistence of vascular plants and fungi	169
8.2 Evolution and homoplasy of wood anatomical traits	125	11.2 Lichens – Coexistence of algae and fungi	170
8.3 Parallel evolution of macroscopic and microscopic traits	128		
9 Anatomical adaptations to permanently changed environmental conditions	133	12 Wood decay	173
9.1 Anatomical and morphological plasticity of species	133	12.1 Abiotic decomposition	173
9.2 Anatomical and morphological adaptation to different climates	136	12.2 Anaerobic decay – Absence of oxygen	174
9.2.1 Trees in the tropics, the temperate and boreal zone	136	12.3 Aerobic decay – Wood-decaying fungi	176
9.2.2 Shrubs in the tropics, the Mediterranean and arctic zone	138	12.4 Compartmentalization – The natural limit to fungal growth	178
		12.5 Decay by xylobiontic insects	179
10 Anatomical adaptations to temporarily changed environmental conditions	141	13 Fossilization, permineralization, coalification, carbonization and wet wood conservation	183
10.1 Anatomical effect of short-term environmental changes during the vegetation period	142	13.1 Fossilization	183
10.1.1 Individual small and large annual rings and missing rings	142	13.2 Permineralization of archaeological artifacts	186
10.1.2 Discontinuous growth – Wedging rings	143	13.3 Coalification	187
10.1.3 Individual small and large latewood zones and latewood zones with thin- or thick-walled tracheids	144	13.4 Carbonization	189
10.1.4 Individual, not fully lignified latewood zones ("blue rings")	144	13.5 Wet wood conservation	190
10.1.5 False rings and density variations	145		
10.1.6 Tissue and fiber cracks	146	14 Technically altered wood products	193
10.2 Effect of multi-annual environmental changes	148	Acknowledgements	197
10.2.1 Abrupt growth changes	148	References and recommended reading	199
10.2.2 Structural changes	149	Index of keywords	201
		Index of species names	205

Abbreviations

co	cortex
comp	companion cell
en	endodermis
epi	epidermis
ew	earlywood
f	fiber
gf	gelatinous fiber
lw	latewood
pa	parenchyma
phe	phellem
ph	phloem
r	ray
si	sieve cell, sieve element
si tube	sieve tube
tr	tracheid
vab	vascular bundle
v	vessel
xy	xylem
