Preface

This volume comprises the proceedings of the 12th International Conference on Parallel Processing and Applied Mathematics – PPAM 2017, which was held in Lublin, Poland, September 10–13, 2017. It was organized by the Department of Computer and Information Science of the Czestochowa University of Technology together with Maria Curie-Skłodowska University in Lublin, under the patronage of the Committee of Informatics of the Polish Academy of Sciences, in technical cooperation with the IEEE Computer Society and ICT COST Action IC1305 “Network for Sustainable Ultrascale Computing (NESUS)”. The main organizer was Roman Wyrzykowski.

PPAM is a biennial conference. Ten previous events have been held in different places in Poland since 1994. The proceedings of the last six conferences have been published by Springer in the *Lecture Notes in Computer Science* series (Nałęczów, 2001, vol. 2328; Częstochowa, 2003, vol. 3019; Poznań, 2005, vol. 3911; Gdańsk, 2007, vol. 4967; Wrocław, 2009, vols. 6067 and 6068; Toruń, 2011, vols. 7203 and 7204; Warsaw, 2013, vols. 8384 and 8385; Kraków, 2015, vols. 9573 and 9574).

The PPAM conferences have become an international forum for the exchange of ideas between researchers involved in parallel and distributed computing, including theory and applications, as well as applied and computational mathematics. The focus of PPAM 2017 was on models, algorithms, and software tools that facilitate efficient and convenient utilization of modern parallel and distributed computing architectures, as well as on large-scale applications, including big data and machine learning problems.

This meeting gathered more than 170 participants from 25 countries. A strict review process resulted in the acceptance of 100 contributed papers for publication in the conference proceedings, while approximately 42% of the submissions were rejected. For regular tracks of the conference, 49 papers were selected from 98 submissions, giving an acceptance rate of 50%.

The regular tracks covered such important fields of parallel/distributed/cloud computing and applied mathematics as:

- Numerical algorithms and parallel scientific computing, including parallel matrix factorizations and particle methods in simulations
- Task-based paradigm of parallel computing
- GPU computing
- Parallel non-numerical algorithms
- Performance evaluation of parallel algorithms and applications
- Environments and frameworks for parallel/distributed/cloud computing
- Applications of parallel computing
- Soft computing with applications

The invited talks were presented by:

- Rosa Badia from the Barcelona Supercomputing Center (Spain)
- Franck Cappello from the Argonne National Laboratory (USA)
- Cris Cecka from NVIDIA and Stanford University (USA)
- Jack Dongarra from the University of Tennessee and ORNL (USA)
- Thomas Fahringer from the University of Innsbruck (Austria)
- Dominik Göttsche from the University of Stuttgart (Germany)
- William Gropp from the University of Illinois Urbana-Champaign (USA)
- Georg Hager from the University of Erlangen-Nurnberg (Germany)
- Alexey Lastovetsky from the University College Dublin (Ireland)
- Satoshi Matsuoka from the Tokyo Institute of Technology (Japan)
- Karlheinz Meier from the University of Heidelberg (Germany)
- Manish Parashar from Rutgers University (USA)
- Jean-Marc Pierson from the University Paul Sabatier (France)
- Uwe Schwiegelshohn from TU Dortmund (Germany)
- Bronis R. de Supinski from the Lawrence Livermore National Laboratory (USA)
- Boleslaw K. Szymanski from the Rensselaer Polytechnic Institute (USA)
- Michela Taufer from the University of Delaware (USA)
- Andrei Tchernykh from the CICESE Research Center (Mexico)
- Jeffrey Vetter from the Oak Ridge National Laboratory and Georgia Institute of Technology (USA)

Important and integral parts of the PPAM 2017 conference were the workshops:

- Workshop on Models, Algorithms, and Methodologies for Hierarchical Parallelism in New HPC Systems organized by Giuliano Laccetti and Marco Lapegna from the University of Naples Federico II (Italy), and Raffaele Montella from the University of Naples Parthenope (Italy)
- Workshop on Power and Energy Aspects of Computation — PEAC 2017 organized by Ariel Oleksiak from the Poznan Supercomputing and Networking Center (Poland) and Laurent Lefevre from Inria (France)
- Workshop on Scheduling for Parallel Computing — SPC 2017 organized by Maciej Drozdowski from the Poznań University of Technology (Poland)
- The 7th Workshop on Language-Based Parallel Programming Models — WLPP 2017 organized by Ami Marowka from Bar-Ilan University (Israel)
- Workshop on PGAS Programming organized by Piotr Bała from Warsaw University (Poland)
- Special Session on Parallel Matrix Factorizations organized by Marian Vajtersic from the University of Salzburg (Austria) and Slovak Academy of Sciences
- Minisymposium on HPC Applications in Physical Sciences organized by Grzegorz Kamieniarz and Wojciech Florek from the A. Mickiewicz University in Poznań (Poland)
- Minisymposium on High-Performance Computing Interval Methods organized by Bartłomiej J. Kubica from Warsaw University of Technology (Poland)
- Workshop on Complex Collective Systems organized by Paweł Topa and Jarosław Wąs from the AGH University of Science and Technology in Kraków (Poland)

The PPAM 2017 meeting began with three tutorials:

- Scientific Computing with GPUs, by Dominik Göddeke from the University of Stuttgart (Germany) and Robert Strzodka from Heidelberg University (Germany)
- Advanced OpenMP Tutorial, by Dirk Schmidl from RWTH Aachen University (Germany)
- Parallel Computing in Java, by Piotr Bała from Warsaw University (Poland), and Marek Nowicki from the Nicolaus Copernicus University in Toruń (Poland)

A new topic at PPAM 2017 was “Particle Methods in Simulations.” Particle-based and Lagrangian formulations are all-time classics in supercomputing and have been wrestling with classic mesh-based approaches such as finite elements for quite a while now, in terms of computational expressiveness and efficiency. Computationally, particle formalisms benefit from very costly inter-particle interactions. These interactions with high arithmetic intensity make them reasonably “low-hanging” fruits in supercomputing with its notoriously limited bandwidth and high concurrency.

Surprisingly, PPAM 2017 was shaped by articles that give up on expensive particle–particle interactions: discrete element methods (DEM) study rigid bodies which interact only rarely once they are in contact, while particle-in-cell (PIC) methods use the physical expressiveness of Lagrangian descriptions but make the particles interact solely locally with a surrounding grid. It is obvious that the lack of direct long-range particle–particle interaction increases the concurrency of the algorithms. Yet, it comes at a price. With low arithmetic intensity, all data structures have to be extremely fine-tuned to perform on modern hardware, and load-balancing has to be lightweight. Codes cannot afford to resort data inefficiently all the time, move around too much data, or work with data structures that are ill-suited for vector processing, while notably the algorithmic parts with limited vectorization potential have to be revisited and maybe rewritten for emerging processors tailored toward stream processing.

The new session “Particle Methods in Simulations” provided a platform for some presentations with interesting and significant contributions addressing these challenges:

- Contact problems are rephrased as continuous minimization problems coupled with a posteriori validity checks, which allows codes to vectorize at least the first step aggressively (by K. Krestenitis, T. Weinzierl, and T. Koziara)
- Classic PIC is recasted into a single-touch algorithm with only few synchronization points, which releases pressure from the memory subsystem (by Y. Barsamian, A. Chargueraud, and A. Ketterlin)
- Cell-based shared memory parallelization of PIC is revised from a scheduling point of view and tailored parallelization schemes are developed, which anticipate the enormous per-cell load imbalances resulting from clustered particles (by A. Larin et al.)
- Particle sorting algorithms are revisited that make the particles be stored in memory in the way they are later accessed by the algorithm even though the particles tend to move through the domain quickly (by A. Dorobisz et al.)

Another new topic at PPAM 2017 was “Task-Based Paradigm of Parallel Computing.” Task-based parallel programming models have appeared in the recent years as an alternative to traditional parallel programming models, both for fine-grain and

coarse-grain parallelism. In this paradigm, the task is the unit of execution and traditionally a data-dependency graph of the application tasks represents the application. From this graph, the potential parallelism of the application is exploited, enabling an asynchronous execution of the tasks that do not require explicit fork-join structures.

Research topics in the area are multiple, from the specification of the syntax or programming interfaces, the definition of new scheduling and resource management algorithms that take into account different metrics, the design of the interfaces with the actual infrastructure, or new algorithms specified in this parallel paradigm. As an example of the success of this paradigm, the OpenMP standard has adopted this paradigm in its latest releases.

This topic was presented at PPAM 2017 in the form of a session that consisted of several presentations from various topics:

- “A Proposal for a Unified Interface for Task-Based Programming Models That Enables the Execution of Applications in Multiple Parallel Environments” (by A. Zafari)
- “A Comparison of Time and Energy Oriented Scheduling for Task-Based Programs, Which Is Based on Real Measured Data for the Tasks Leading to Diverse Effects Concerning Time, Energy, and Power Consumption” (by T. Rauber and G. Runger)
- “A Study of a Set of Experiments with the Sparse Cholesky Decomposition on Multicore Platforms, Using a Parametrized Task Graph Implementation” (by I. Duff and F. Lopez)
- “A Task-Based Algorithm for Reordering the Eigenvalues of a Matrix in Real Schur Form, Which Is Realized on Top of the StarPU Runtime System” (by M. Myllykoski)

A new topic at PPAM 2017 was the “Special Session on Parallel Matrix Factorizations.” Nowadays, in order to meet demands of high-performance computing, it is necessary to pay serious attention to the development of fast, reliable, and communication-efficient algorithms for solving kernel linear algebra problems. Tasks that lead to matrix decomposition computations are undoubtedly some of the most frequent problems encountered in this field. Therefore, the aim of the special session was to present new results from parallel linear algebra with an emphasis on methods and algorithms for factorizations and decompositions of large sparse and dense matrices. Both theoretical aspects and software issues related to this problem area were considered for submission.

The topics of the special session focused on: (a) efficient algorithms for the EVD/SVD/NMF decompositions of large matrices, their design and analysis; (b) implementation of parallel matrix factorization algorithms on parallel CPU and GPU systems; (c) usage of parallel matrix factorizations for solving problems arising in scientific and technical applications. Seven papers were accepted for presentation, which covered the session topics. Geographically, the authors were dispersed among two continents and five countries. The individual themes of the contributions included:

- “New Preconditioning for the One-Sided Block-Jacobi Singular Value Decomposition Algorithm” (by M. Bečka, G. Okša, and E. Vidličková)

- “Using the Cholesky QR Method in the Full-Blocked One-Sided Jacobi Algorithm” (by S. Kudo and Y. Yamamoto)
- “Parallel Divide-and-Conquer Algorithm for Solving Tridiagonal Eigenvalue Problems on Manycore Systems” (by Y. Hirota and I. Toshiyuki)
- “Structure-Preserving Technique in the Block SS-Hankel Method for Solving Hermitian Generalized Eigenvalue Problems” (by A. Imakura, Y. Futamura, and T. Sakurai)
- “Parallel Inverse of Non-Hermitian Block Tridiagonal Matrices” (by L. Spellacy and D. Golden)
- “Tunability of a New Hessenberg Reduction Algorithm Using Parallel Cache Assignment” (by M. Eljammaly, L. Karlsson, and B. Kågström)
- “Convergence and Parallelization of Nonnegative Matrix Factorization (NMF) with Newton Iteration” (by R. Kutil, M. Flatz, and M. Vajtersic).

The organizers are indebted to the PPAM 2017 sponsors, whose support was vital for the success of the conference. The main sponsor was the Intel Corporation. Another important sponsor was Lenovo. We thank all the members of the international Program Committee and additional reviewers for their diligent work in refereeing the submitted papers. Finally, we thank all the local organizers from the Częstochowa University of Technology, and Maria Curie-Skłodowska University in Lublin, who helped us run the event very smoothly. We are especially indebted to Grażyna Kołakowska, Urszula Kroczevska, Łukasz Kuczyński, Adam Tomasz, and Marcin Woźniak from the Częstochowa University of Technology; and to Przemysław Stpiczyński and Beata Bylina from Maria Curie-Skłodowska University. Also, Paweł Gepner from Intel offered great help in organizing social events for PPAM 2017, including the excursion to the Zamoyski Palace in Kozłówka and the concert of the youth accordion orchestra “Arti Sentemo” at the Royal Castle in Lublin.

We hope that this volume will be useful to you. We would like everyone who reads it to feel invited to the next conference, PPAM 2019, which will be held during September 8–11, 2019, in Białystok, the largest city in northeastern Poland, located close to the world-famous Białowieża Forest.

Contents – Part I

Numerical Algorithms and Parallel Scientific Computing

Advances in Incremental PCA Algorithms	3
<i>Tal Halpern and Sivan Toledo</i>	
Algorithms for Forward and Backward Solution of the Fokker-Planck Equation in the Heliospheric Transport of Cosmic Rays.	14
<i>Anna Wawrzynczak, Renata Modzelewska, and Agnieszka Gil</i>	
Efficient Evaluation of Matrix Polynomials	24
<i>Niv Hoffman, Oded Schwartz, and Sivan Toledo</i>	
A Comparison of Soft-Fault Error Models in the Parallel Preconditioned Flexible GMRES	36
<i>Evan Coleman, Aygul Jamal, Marc Baboulin, Amal Khabou, and Masha Sosonkina</i>	
Multilayer Approach for Joint Direct and Transposed Sparse Matrix Vector Multiplication for Multithreaded CPUs	47
<i>Ivan Šimeček, Daniel Langr, and Ivan Kotenkov</i>	
Comparison of Parallel Time-Periodic Navier-Stokes Solvers	57
<i>Peter Arbenz, Daniel Hupp, and Dominik Obrist</i>	
Blocked Algorithms for Robust Solution of Triangular Linear Systems	68
<i>Carl Christian Kjelgaard Mikkelsen and Lars Karlsson</i>	
A Comparison of Accuracy and Efficiency of Parallel Solvers for Fractional Power Diffusion Problems	79
<i>Raimondas Čiegis, Vadimas Starikovičius, Svetozar Margenov, and Rima Kriauzienė</i>	
Efficient Cross Section Reconstruction on Modern Multi and Many Core Architectures.	90
<i>Yunsong Wang, François-Xavier Hugot, Emeric Brun, Fausto Malvagi, and Christophe Calvin</i>	
Parallel Assembly of ACA BEM Matrices on Xeon Phi Clusters.	101
<i>Michal Kravcenko, Lukas Maly, Michal Merta, and Jan Zapletal</i>	
Stochastic Bounds for Markov Chains on Intel Xeon Phi Coprocessor.	111
<i>Jarosław Bylina</i>	

Particle Methods in Simulations

Fast DEM Collision Checks on Multicore Nodes	123
<i>Konstantinos Krestenitis, Tobias Weinzierl, and Tomasz Koziara</i>	
A Space and Bandwidth Efficient Multicore Algorithm for the Particle-in-Cell Method	133
<i>Yann Barsamian, Arthur Charguéraud, and Alain Ketterlin</i>	
Load Balancing for Particle-in-Cell Plasma Simulation on Multicore Systems	145
<i>Anton Larin, Sergey Bastrakov, Aleksei Bashinov, Evgeny Efimenko, Igor Surmin, Arkady Gonoskov, and Iosif Meyerov</i>	
The Impact of Particle Sorting on Particle-In-Cell Simulation Performance . . .	156
<i>Andrzej Dorobisz, Michał Kotwica, Jacek Niemiec, Oleh Kobzar, Artem Bohdan, and Kazimierz Wiatr</i>	

Task-Based Paradigm of Parallel Computing

TaskUniVerse: A Task-Based Unified Interface for Versatile Parallel Execution	169
<i>Afshin Zafari</i>	
Comparison of Time and Energy Oriented Scheduling for Task-Based Programs	185
<i>Thomas Rauber and Gudula Rünger</i>	
Experiments with Sparse Cholesky Using a Parametrized Task Graph Implementation	197
<i>Iain Duff and Florent Lopez</i>	
A Task-Based Algorithm for Reordering the Eigenvalues of a Matrix in Real Schur Form	207
<i>Mirko Myllykoski</i>	

GPU Computing

Radix Tree for Binary Sequences on GPU	219
<i>Krzysztof Kaczmarek and Albert Wolant</i>	
A Comparison of Performance Tuning Process for Different Generations of NVIDIA GPUs and an Example Scientific Computing Algorithm	232
<i>Krzysztof Banaś, Filip Krużel, Jan Bielański, and Kazimierz Chłoń</i>	

NVIDIA GPUs Scalability to Solve Multiple (Batch) Tridiagonal Systems
 Implementation of cuThomasBatch 243
*Pedro Valero-Lara, Ivan Martínez-Pérez, Raül Sirvent,
 Xavier Martorell, and Antonio J. Peña*

Two-Echelon System Stochastic Optimization with R and CUDA 254
*Witold Andrzejewski, Maciej Drozdowski, Gang Mu,
 and Yong Chao Sun*

Parallel Hierarchical Agglomerative Clustering for fMRI Data 265
Mélodie Angeletti, Jean-Marie Bonny, Franck Durif, and Jonas Koko

Parallel Non-numerical Algorithms

Two Parallelization Schemes for the Induction of Nondeterministic Finite
 Automata on PCs 279
Tomasz Jastrzab

Approximating Personalized Katz Centrality in Dynamic Graphs. 290
Eisha Nathan and David A. Bader

Graph-Based Speculative Query Execution for RDBMS. 303
Anna Sasak-Okoń and Marek Tudruj

A GPU Implementation of Bulk Execution of the Dynamic Programming
 for the Optimal Polygon Triangulation. 314
Kohei Yamashita, Yasuaki Ito, and Koji Nakano

Performance Evaluation of Parallel Algorithms and Applications

Early Performance Evaluation of the Hybrid Cluster with Torus
 Interconnect Aimed at Molecular-Dynamics Simulations 327
*Vladimir Stegailov, Alexander Agarkov, Sergey Biryukov,
 Timur Ismagilov, Mikhail Khalilov, Nikolay Kondratyuk,
 Evgeny Kushtanov, Dmitry Makagon, Anatoly Mukosey,
 Alexander Semenov, Alexey Simonov, Alexey Timofeev,
 and Vyacheslav Vecher*

Load Balancing for CPU-GPU Coupling in Computational
 Fluid Dynamics 337
Immo Huisman, Matthias Lieber, Jörg Stiller, and Jochen Fröhlich

Implementation and Performance Analysis of 2.5D-PDGEMM
 on the K Computer 348
Daichi Mukunoki and Toshiyuki Imamura

An Approach for Detecting Abnormal Parallel Applications Based on Time Series Analysis Methods	359
<i>Denis Shaykhislamov and Vadim Voevodin</i>	
Prediction of the Inter-Node Communication Costs of a New Gyrokinetic Code with Toroidal Domain	370
<i>Andreas Jocksch, Noé Ohana, Emmanuel Lanti, Aaron Scheinberg, Stephan Brunner, Claudio Gheller, and Laurent Villard</i>	
D-Spline Performance Tuning Method Flexibly Responsive to Execution Time Perturbation	381
<i>Guning Fan, Masayoshi Mochizuki, Akihiro Fujii, Teruo Tanaka, and Takahiro Katagiri</i>	
Environments and Frameworks for Parallel/Distributed/Cloud Computing	
Dfuntest: A Testing Framework for Distributed Applications	395
<i>Grzegorz Milka and Krzysztof Rządca</i>	
Security Monitoring and Analytics in the Context of HPC Processing Model	406
<i>Mikołaj Dobski, Gerard Frankowski, Norbert Meyer, Maciej Miłostan, and Michał Pilc</i>	
Multidimensional Performance and Scalability Analysis for Diverse Applications Based on System Monitoring Data	417
<i>Maya Neytcheva, Sverker Holmgren, Jonathan Bull, Ali Dorostkar, Anastasia Kruchinina, Dmitry Nikitenko, Nina Popova, Pavel Shvets, Alexey Teplov, Vadim Voevodin, and Vladimir Voevodin</i>	
Bridging the Gap Between HPC and Cloud Using HyperFlow and PaaSage	432
<i>Dennis Hoppe, Yosandra Sandoval, Anthony Sulistio, Maciej Malawski, Bartosz Balis, Maciej Pawlik, Kamil Figiela, Dariusz Król, Michał Orzechowski, Jacek Kitowski, and Marian Bubak</i>	
A Memory Efficient Parallel All-Pairs Computation Framework: Computation – Communication Overlap.	443
<i>Venkata Kasi Viswanath Yeleswarapu and Arun K. Somani</i>	
Automatic Parallelization of ANSI C to CUDA C Programs.	459
<i>Jan Kwiatkowski and Džanan Bajgorić</i>	
Consistency Models for Global Scalable Data Access Services	471
<i>Michał Wrzeszcz, Darin Nikolow, Tomasz Lichoń, Rafał Słota, Łukasz Dutka, Renata G. Słota, and Jacek Kitowski</i>	

Applications of Parallel Computing

Global State Monitoring in Optimization of Parallel Event-Driven Simulation	483
<i>Łukasz Maśko and Marek Tudruj</i>	
High Performance Optimization of Independent Component Analysis Algorithm for EEG Data	495
<i>Anna Gajos-Balińska, Grzegorz M. Wójcik, and Przemysław Stpicznyński</i>	
Continuous and Discrete Models of Melanoma Progression Simulated in Multi-GPU Environment	505
<i>Witold Dzwinel, Adrian Klusek, Rafał Wcisło, Marta Panuszewska, and Paweł Topa</i>	
Early Experience on Using Knights Landing Processors for Lattice Boltzmann Applications	519
<i>Enrico Calore, Alessandro Gabbana, Sebastiano Fabio Schifano, and Raffaele Tripiccione</i>	

Soft Computing with Applications

Towards a Model of Semi-supervised Learning for the Syntactic Pattern Recognition-Based Electrical Load Prediction System	533
<i>Janusz Jurek</i>	
Parallel Processing of Color Digital Images for Linguistic Description of Their Content	544
<i>Krzysztof Wiaderek, Danuta Rutkowska, and Elisabeth Rakus-Andersson</i>	
Co-evolution of Fitness Predictors and Deep Neural Networks	555
<i>Włodzimierz Funika and Paweł Koperek</i>	
Performance Evaluation of DBN Learning on Intel Multi- and Manycore Architectures	565
<i>Tomasz Olas, Wojciech K. Mleczko, Marcin Wozniak, Robert K. Nowicki, and Paweł Gepner</i>	

Special Session on Parallel Matrix Factorizations

On the Tunability of a New Hessenberg Reduction Algorithm Using Parallel Cache Assignment	579
<i>Mahmoud Eljammaly, Lars Karlsson, and Bo Kågström</i>	
New Preconditioning for the One-Sided Block-Jacobi SVD Algorithm.	590
<i>Martin Bečka, Gabriel Okša, and Eva Vidličková</i>	

Structure-Preserving Technique in the Block SS–Hankel Method
for Solving Hermitian Generalized Eigenvalue Problems 600
Akira Imakura, Yasunori Futamura, and Tetsuya Sakurai

On Using the Cholesky QR Method in the Full-Blocked One-Sided
Jacobi Algorithm. 612
Shuhei Kudo and Yusaku Yamamoto

Parallel Divide-and-Conquer Algorithm for Solving Tridiagonal Eigenvalue
Problems on Manycore Systems 623
Yusuke Hirota and Toshiyuki Imamura

Partial Inverses of Complex Block Tridiagonal Matrices 634
Louise Spellacy and Darach Golden

Parallel Nonnegative Matrix Factorization Based on Newton Iteration
with Improved Convergence Behavior 646
Rade Kutil, Markus Flatz, and Marián Vajteršić

Author Index 657

Contents – Part II

Workshop on Models, Algorithms and Methodologies for Hybrid Parallelism in New HPC Systems

An Experience Report on (Auto-)tuning of Mesh-Based PDE Solvers on Shared Memory Systems	3
<i>Dominic E. Charrier and Tobias Weinzierl</i>	
Using GPGPU Accelerated Interpolation Algorithms for Marine Bathymetry Processing with On-Premises and Cloud Based Computational Resources	14
<i>Livia Marcellino, Raffaele Montella, Sokol Kosta, Ardelio Galletti, Diana Di Luccio, Vincenzo Santopietro, Mario Ruggieri, Marco Lapegna, Luisa D'Amore, and Giuliano Laccetti</i>	
Relaxing the Correctness Conditions on Concurrent Data Structures for Multicore CPUs. A Numerical Case Study	25
<i>Giuliano Laccetti, Marco Lapegna, Valeria Mele, and Raffaele Montella</i>	
Energy Analysis of a 4D Variational Data Assimilation Algorithm and Evaluation on ARM-Based HPC Systems	37
<i>Rossella Arcucci, Davide Basciano, Alessandro Cilaro, Luisa D'Amore, and Filippo Mantovani</i>	
Performance Assessment of the Incremental Strong Constraints 4DVAR Algorithm in ROMS	48
<i>Luisa D'Amore, Rossella Arcucci, Yi Li, Raffaele Montella, Andrew Moore, Luke Phillipson, and Ralf Toumi</i>	
Evaluation of HCM: A New Model to Predict the Execution Time of Regular Parallel Applications on a Heterogeneous Cluster	58
<i>Thiago Marques Soares, Rodrigo Weber dos Santos, and Marcelo Lobosco</i>	

Workshop on Power and Energy Aspects of Computations (PEAC 2017)

Applicability of the Empirical Mode Decomposition for Power Traces of Large-Scale Applications	71
<i>Gary Lawson, Masha Sosonkina, Tal Ezer, and Yuzhong Shen</i>	

Efficiency Analysis of Intel, AMD and Nvidia 64-Bit Hardware for Memory-Bound Problems: A Case Study of Ab Initio Calculations with VASP	81
<i>Vladimir Stegailov and Vyacheslav Vecher</i>	
GPU Power Modeling of HPC Applications for the Simulation of Heterogeneous Clouds	91
<i>Antonios T. Makaratzis, Malik M. Khan, Konstantinos M. Giannoutakis, Anne C. Elster, and Dimitrios Tzovaras</i>	
Bi-cluster Parallel Computing in Bioinformatics – Performance and Eco-Efficiency	102
<i>Paweł Foszner and Przemysław Skurowski</i>	
Performance and Energy Analysis of Scientific Workloads Executing on LPSoCs	113
<i>Anish Varghese, Joshua Milthorpe, and Alistair P. Rendell</i>	
Energy Efficient Dynamic Load Balancing over MultiGPU Heterogeneous Systems	123
<i>Alberto Cabrera, Alejandro Acosta, Francisco Almeida, and Vicente Blanco</i>	
Workshop on Scheduling for Parallel Computing (SPC 2017)	
Scheduling Data Gathering with Maximum Lateness Objective	135
<i>Joanna Berlińska</i>	
Fair Scheduling in Grid VOs with Anticipation Heuristic	145
<i>Victor Toporkov, Dmitry Yemelyanov, and Anna Toporkova</i>	
A Security-Driven Approach to Online Job Scheduling in IaaS Cloud Computing Systems	156
<i>Jakub Gąsior, Franciszek Seredyński, and Andrei Tchernykh</i>	
Dynamic Load Balancing Algorithm for Heterogeneous Clusters.	166
<i>Tiago Marques do Nascimento, Rodrigo Weber dos Santos, and Marcelo Lobosco</i>	
Multi-Objective Extremal Optimization in Processor Load Balancing for Distributed Programs	176
<i>Ivanoe De Falco, Eryk Laskowski, Richard Olejnik, Umberto Scafuri, Ernesto Tarantino, and Marek Tudruj</i>	

Workshop on Language-Based Parallel Programming Models (WLPP 2017)

Pardis: A Process Calculus for Parallel and Distributed Programming in Haskell. 191
Christopher Blöcker and Ulrich Hoffmann

Towards High-Performance Python 203
Ami Marowka

Actor Model of a New Functional Language - Anemone 213
Paweł Batko and Marcin Kuta

Almost Optimal Column-wise Prefix-sum Computation on the GPU 224
Hiroki Tokura, Toru Fujita, Koji Nakano, and Yasuaki Ito

A Combination of Intra- and Inter-place Work Stealing for the APGAS Library 234
Jonas Posner and Claudia Fohry

Benchmarking Molecular Dynamics with OpenCL on Many-Core Architectures. 244
Rene Halver, Wilhelm Homberg, and Godehard Sutmann

Efficient Language-Based Parallelization of Computational Problems Using Cilk Plus 254
Przemysław Stpicznyński

A Taxonomy of Task-Based Technologies for High-Performance Computing. 264
Peter Thoman, Khalid Hasanov, Kiril Dichev, Roman Iakymchuk, Xavier Aguilar, Philipp Gschwandtner, Pierre Lemarinier, Stefano Markidis, Herbert Jordan, Erwin Laure, Kostas Katrinis, Dimitrios S. Nikolopoulos, and Thomas Fahringer

Workshop on PGAS Programming

Interoperability of GASPI and MPI in Large Scale Scientific Applications 277
Dana Akhmetova, Luis Cebamano, Roman Iakymchuk, Tiberiu Rotaru, Mirko Rahn, Stefano Markidis, Erwin Laure, Valeria Bartsch, and Christian Simmendinger

Evaluation of the Parallel Performance of the Java and PCJ on the Intel KNL Based Systems 288
Marek Nowicki, Łukasz Górski, and Piotr Bała

Fault-Tolerance Mechanisms for the Java Parallel Codes Implemented with the PCJ Library	298
<i>Michał Szynkiewicz and Marek Nowicki</i>	
Exploring Graph Analytics with the PCJ Toolbox	308
<i>Roxana Istrate, Panagiotis Kl. Barkoutsos, Michele Dolfi, Peter W. J. Staar, and Costas Bekas</i>	
Big Data Analytics in Java with PCJ Library: Performance Comparison with Hadoop.	318
<i>Marek Nowicki, Magdalena Ryczkowska, Łukasz Górski, and Piotr Bala</i>	
Performance Comparison of Graph BFS Implemented in MapReduce and PGAS Programming Models	328
<i>Magdalena Ryczkowska and Marek Nowicki</i>	
Minisymposium on HPC Applications in Physical Sciences	
Efficient Parallel Generation of Many-Nucleon Basis for Large-Scale <i>Ab Initio</i> Nuclear Structure Calculations	341
<i>Daniel Langr, Tomáš Dytrych, Tomáš Oberhuber, and František Knapp</i>	
Parallel Exact Diagonalization Approach to Large Molecular Nanomagnets Modelling	351
<i>Michał Antkowiak</i>	
Application of Numerical Quantum Transfer-Matrix Approach in the Randomly Diluted Quantum Spin Chains	359
<i>Ryszard Matysiak, Philipp Gegenwart, Akira Ochiai, and Frank Steglich</i>	
Minisymposium on High Performance Computing Interval Methods	
A New Method for Solving Nonlinear Interval and Fuzzy Equations	371
<i>Ludmila Dymova and Pavel Sevastjanov</i>	
Role of Hull-Consistency in the HIBA_USNE Multithreaded Solver for Nonlinear Systems	381
<i>Bartłomiej Jacek Kubica</i>	
Parallel Computing of Linear Systems with Linearly Dependent Intervals in MATLAB	391
<i>Ondřej Král and Milan Hladík</i>	

What Decision to Make in a Conflict Situation Under Interval Uncertainty: Efficient Algorithms for the Hurwicz Approach <i>Bartłomiej Jacek Kubica, Andrzej Pownuk, and Vladik Kreinovich</i>	402
Practical Need for Algebraic (Equality-Type) Solutions of Interval Equations and for Extended-Zero Solutions <i>Ludmila Dymova, Pavel Sevastjanov, Andrzej Pownuk, and Vladik Kreinovich</i>	412
Workshop on Complex Collective Systems	
Application of Local Search with Perturbation Inspired by Cellular Automata for Heuristic Optimization of Sensor Network Coverage Problem <i>Krzysztof Trojanowski, Artur Mikitiuk, and Krzysztof J. M. Napiorkowski</i>	425
A Fuzzy Logic Inspired Cellular Automata Based Model for Simulating Crowd Evacuation Processes <i>Prodromos Gavriilidis, Ioannis Gerakakis, Ioakeim G. Georgoudas, Giuseppe A. Trunfio, and Georgios Ch. Sirakoulis</i>	436
Nondeterministic Cellular Automaton for Modelling Urban Traffic with Self-organizing Control <i>Jacek Szklarski</i>	446
Towards Multi-Agent Simulations Accelerated by GPU <i>Kamil Piętak and Paweł Topa</i>	456
Tournament-Based Convection Selection in Evolutionary Algorithms <i>Maciej Komosinski and Konrad Miazga</i>	466
Multi-agent Systems Programmed Visually with Google Blockly <i>Szymon Górowski, Robert Maguda, and Paweł Topa</i>	476
Author Index	485
