# Preface

In China the past 20 years have been characterized by rapid economic growth and urbanization. The concentration and intensification of human activities are so significant that the natural environment has ceased to conform to the normal conditions of human life.

Modern Chinese cities are powerful systems, and every city has changed, both within its own territory and far beyond. At the same time, the atmosphere, the geographical environment of Earth that is the most mobile and sensitive to contamination, has been subjected to significant human impact. High concentrations of pollutants in the atmosphere of the cities and industrial centers causes great harm to public health, as well as damage to agriculture, industry, residential buildings, technical facilities, and historical monuments. The fact that regional environmental problems have become particularly acute in China in recent years is no coincidence.

Lanzhou City, in Northwestern China, is currently facing a serious air quality problem, with key factors such as particulate matter in the air leading to serious and increased urban pollution. Thus, it is vital to control the pollution level and the various atmospheric pollutants in the city and to evaluate its air quality; accordingly, reasonable prediction methods must be found to control its air quality. Therefore, in this book we aimed to study the role of natural and anthropogenic factors in the formation of air pollution in Lanzhou City, the main industrial center of Northwestern China. We used the following methods: mathematical statistics, the hybrid single particle Lagrangian integrated trajectory model (HYSPLIT), and Cloud-Aerosol Lidar and the Infrared Pathfinder Satellite Observations (CALIPSO), as well as the ozone monitoring instrument (OMI) method of predicting aerosol pollution by the Navy Aerosol Analysis and Prediction System (NAAPS), utilizing the data obtained from ground-based air quality monitoring stations and the MODIS (Terra) and Landsat-8 satellites. The study is based on data obtained from January 1, 2003, to December 31, 2016, covering different seasons.

The authors would like to express their appreciation to many people who made the completion of this book possible. Above all, the first author is grateful to Professor Yang Shuwen in the Faculty of Geomatics, Lanzhou Jiaotong University, China, and Professor Zhao Baowei in the Faculty of Environmental and Municipal Engineering,

Lanzhou Jiaotong University, China, for their valuable and competent advice and guidance, and for their immense support and contribution. The first author is also grateful to Associate Professor Alexander N. Kusenkov in the Department of Ecology, Gomel State University, Belarus, who indirectly helped with the completion of the book. The first author would like to express his profound gratitude to his family—especially his mother, whose help, prayers, encouragement, and kind cooperation helped throughout the entire period of this study—and to thank his friend Volha Hurynovich, for her incredible support and wonderful contribution toward the completion of this research.

Last but not least, the authors appreciate the National Key R&D Program of China (2017YFB0504203 and 2017YFB0504201), the National Natural Science Foundation of China (No. 41371435), and the Talent Innovation Project of Lanzhou (No. 2015-RC-28) for their financial support of the work described in the book.

This book can be used as a reference for graduates and researchers who are interested in ecology and air pollution, especially dust air pollution and atmospheric particulate matter (PM)<sub>2.5</sub> or PM<sub>10</sub>. Any comments and suggestions regarding this book will be greatly welcomed and appreciated.

# Contents

<b>1</b>	<b>Introduction</b> . . . . .	1
1.1	Background . . . . .	1
1.2	Existing Research Work . . . . .	4
1.2.1	Research on Atmospheric Remote-Sensing Satellite Technology . . . . .	4
1.2.2	Experience of Studying Urban Areas Using Thermal Images . . . . .	12
1.2.3	Research Status of Atmospheric Particulate Matter Pollution Levels . . . . .	15
1.2.4	Investigation of Human Health Effects of Atmospheric Pollutants . . . . .	19
1.3	Research Objectives . . . . .	20
1.4	Significance of the Study . . . . .	21
1.5	Problems and Shortcomings . . . . .	22
1.6	Book Outline . . . . .	22
<b>2</b>	<b>Location and Methods of Investigation</b> . . . . .	25
2.1	Location of the Study . . . . .	25
2.1.1	Geographic Location . . . . .	25
2.1.2	Characteristics of the City Districts . . . . .	25
2.1.3	Climate and Environmental Problems . . . . .	27
2.2	Sources of Data . . . . .	28
2.2.1	Ground-Based PM and Gaseous Pollutants Concentration Data . . . . .	28
2.2.2	Ground-Based Meteorological Measurements . . . . .	29
2.2.3	Data of MODIS . . . . .	29
2.2.4	Data of Landsat 8 . . . . .	29

2.3	Methodology . . . . .	32
2.3.1	Criteria for Evaluation of Air Pollution . . . . .	32
2.3.2	Satellite-Based Measurements . . . . .	34
2.3.3	Method of Extracting Ecological Factors of Underlying Surface . . . . .	36
2.3.4	Statistical Analysis . . . . .	40
<b>3</b>	<b>Research of Aerosol Optical Depth and Urban Heart Island in Lanzhou City by Means of Earth Remote Sensing . . . . .</b>	<b>41</b>
3.1	Spatial and Temporal Variability of the Temperature of Earth's Surface in Lanzhou City . . . . .	41
3.2	Research of Aerosol Optical Depth and Urban Heart Island in Lanzhou City by Means of Earth Remote Sensing . . . . .	48
3.3	Spatial and Temporal Variability of Aerosol Optical Depth Using the MODIS Data . . . . .	49
3.4	Temporal and Spatial Distribution of Atmospheric Aerosol in Typical Dusty Weather in Lanzhou Using CALIPSO, OMI, and NAAPS . . . . .	55
<b>4</b>	<b>Study of Air Pollution in Lanzhou City in 2003–2012 . . . . .</b>	<b>61</b>
4.1	Urban Air Quality Assessment . . . . .	61
4.2	Temporal Variation in Air Pollutant Concentration . . . . .	63
4.2.1	Annual Variation in Pollutant Concentration . . . . .	63
4.2.2	Seasonal Changes in the Pollutant Concentration . . . . .	65
4.2.3	Daily Variations of Pollutants . . . . .	67
4.3	Correlation Between Air Quality and Meteorological Conditions . . . . .	69
<b>5</b>	<b>Level of Pollutants Concentration in the Atmosphere of Lanzhou . . . . .</b>	<b>73</b>
5.1	Total Level of Pollution . . . . .	73
5.2	Statistical Characteristics of Pollutant Concentrations in the Atmosphere of Lanzhou in 2013–2016 . . . . .	75
5.2.1	PM <sub>2.5</sub> and PM <sub>10</sub> Concentrations in Lanzhou . . . . .	75
5.2.2	Concentration of Carbon Monoxide (CO) in Lanzhou . . . . .	80
5.2.3	Concentration of Nitrogen Dioxide (NO <sub>2</sub> ) in Lanzhou . . . . .	83
5.2.4	Concentration of Sulfur Dioxide (SO <sub>2</sub> ) in Lanzhou . . . . .	85
5.2.5	Concentration of Ozone (O <sub>3</sub> ) in Lanzhou . . . . .	87
5.3	Correlation Between PM and Gaseous Pollutants . . . . .	89
5.3.1	Correlation Between PM <sub>2.5</sub> and PM <sub>10</sub> in Different Seasons . . . . .	89
5.3.2	Correlation Between PM and Gaseous Pollutants . . . . .	91
5.3.3	Correlation Between Gaseous Pollutants . . . . .	92

- 6 Analysis of the Causes of Influencing Factors of Air Pollution in Lanzhou** . . . . . 97
  - 6.1 Impact of Dust Storms on Air Quality . . . . . 97
    - 6.1.1 Classification and Characteristics of Dust Storms. . . . . 98
    - 6.1.2 Regional Pollution Characteristics of the Dust Weather . . . 100
    - 6.1.3 Effects of Sandstorms on Air Quality in Lanzhou. . . . . 103
    - 6.1.4 Long-Range Transport of Dust in Lanzhou. . . . . 105
  - 6.2 Meteorological Conditions of Air Pollution in Lanzhou. . . . . 108
    - 6.2.1 Meteorological Conditions of Atmospheric Pollution. . . . . 108

# Abbreviations

<b>°C</b>	Degrees Celsius
<b>µg/m<sup>3</sup></b>	Micrograms (1-millionth of a gram) per cubic meter air
<b>µm</b>	Micrometer
<b>τ</b>	Optical depth or optical thickness (usually taken to mean “aerosol” optical depth, AOD, or optical thickness, AOT). May have subscripts to symbolize wavelength or measured by which instrument (e.g., $\tau_{0.55}$ )
<b>a.m.</b>	Indicating the time period from midnight to midday (ante meridiem)
<b>AAI</b>	Absorbing aerosol index
<b>AOD</b>	Aerosol optical depth
<b>AOT</b>	Aerosol optical thickness
<b>API</b>	Air pollution index
<b>AQI</b>	Air quality index
<b>CALIPSO</b>	Cloud-Aerosol Lidar and Infrared Pathfinder Satellite Observations
<b>HYSPLIT</b>	Hybrid Single Particle Lagrangian Integrated Trajectory model
<b>K'</b>	Meteorological self-cleaning capacity of the atmosphere
<b>km</b>	Kilometer
<b>LST</b>	Land surface temperature
<b>m/s</b>	Meter per second
<b>MEP</b>	Ministry of Environmental Protection of the People’s Republic of China
<b>mg/m<sup>3</sup></b>	Milligrams (1-thousandth of a gram) per cubic meter air
<b>mm</b>	Millimeter
<b>MODIS</b>	Moderate-Resolution Imaging Spectroradiometer
<b>NAAPS</b>	Navy Aerosol Analysis and Prediction System
<b>NAAQS</b>	National Ambient Air Quality Standard
<b>NDVI</b>	Normalized difference vegetation index
<b>nm</b>	Nanometer
<b>NO<sub>x</sub></b>	Nitrogen oxides
<b>OMI</b>	Ozone Monitoring Instrument
<b>p.m.</b>	Indicating the time period from midday to midnight (post meridiem)
<b>PAP</b>	Potential atmosphere pollution

<b>PM<sub>10</sub></b>	Concentration of particulate matter less than 10 µm in diameter
<b>PM<sub>2.5</sub></b>	Concentration of particulate matter less than 2.5 µm in diameter
<b><i>r</i></b>	Pearson's linear correlation
<b><i>R</i><sup>2</sup></b>	Coefficient of determination
<b>RH</b>	Relative humidity (%)
<b>RMA</b>	Reduced major axis
<b><i>r<sub>s</sub></i></b>	Spearman's rank correlation coefficient
<b><i>T</i></b>	Temperature (°C)
<b>UHI</b>	Urban heat island
<b>UTC</b>	Coordinated universal time
<b>UV</b>	Ultraviolet
<b><i>V</i></b>	Visibility (km)
<b>VOC</b>	Volatile organic compounds
<b>WHO</b>	World Health Organization
<b>WS</b>	Wind speed (m/s)
