

Part II

A Pedagogical Experiment on CLIC Cultivation

Overview

This part, consisting of Chaps. 5, 6, and 7, presents a pedagogical experiment, which empirically proves the contributions of the enhanced CLIC in improving CVA ability, RC and, more importantly, an increase in self-confidence concerning the outcomes of lexical inferencing. In Chap. 5, the methodology adopted to conduct the empirical investigation is described in detail. Chapter 6 delineates with some explanations the method of analyzing the collected data. Research questions are answered in Chap. 7 on the basis of statistical analysis of the data collected through the empirical research.
