TO MY WIFE

Judy, Dick-Ha Nei

INTRODUCTION

Nuclear spaces were discovered by A. Grothendieck, and the most important part of the theory of nuclear spaces was developed in his famous article (see Grothendieck [2]). Unfortunately, the machinery of tensor products used there is very cumbersome; this makes the theory some unnecessary difficulties and complicacy. Pietsch [1] was the first to simplify the theory of nuclear spaces by using locally convex spaces of summable and absolutely summable families, instead of locally convex tensor products. It is my impression that the idea of using seminorms satisfying some expected properties to investigate some classes of locally convex spaces, would make the development of the whole theory easier. This has been done by the author [1] for studying the topology σ_S of uniform convergence on order-bounded sets. Thus, one of the purposes of these lecture notes is to embark upon a unifying treatment of Schwartz spaces, nuclear spaces, and λ -nuclear spaces by using this idea. Therefore, this monograph is actually a continuation of that written by the author [1].

These lecture notes contain six chapters, starting with Chapter 0 in which terminology and some elementary results in topological vector spaces, that will be used through these notes, are given. Chapter 1 deals with Schwartz spaces by means of precompactness of seminorms. Chapter 3 is concerned with nuclear spaces in terms of prenuclearity of seminorms; in order to show that our definition of nuclearity coincides with the usual one, we use the concept of summability which is studied in the first two sections of Chapter 2.

In Chapter 4, the s -norm on a tensor product of normed spaces, studied by Cohen [1], is constructed in a natural way by asking when its Banach dual is isometrically isomorphic to the well-known Banach space of all absolutely summing mappings equipped with the absolutely summing norm. Using the same idea we construct the ℓ -norm on a tensor product of ordered normed spaces from the well-known Banach space of all cone-absolutely summing mappings equipped with a suitable norm. The ℓ -norm has been studied by Schaefer [2] for the tensor product of Banach lattices. Also in Chapter 5, we study two locally solid

topologies on the tensor product, equipped with the projective and biprojective cone, of two locally solid spaces.

A few words should be said about the reference system in these notes, (i, j, k) will denote the k -th proposition or theorem in Chapter i , Section j .

Parts of these notes were delivered at the University of Western Australia, during the period from November to December, 1976. The author would like to thank both the University of Western Australia and The Chinese University of Hong Kong for financial and moral support during his stay in Perth.

I express my sincere thanks to my colleagues and friends in two Universities who give me many encouragements, in particular, to Dr K.F. Ng and Dr P.K. Tam for many helpful commends. Finally, I would like to thank Mr. Billy P.M. Lam for his truly outstanding job of typing the manuscript.

Y.C.W.

CONTENTS

CHAPTER 0.	GENERAL NOTATIONS	1
CHAPTER 1.	SCHWARTZ SPACES	
1.1	Precompact linear mappings	8
1.2	Precompact seminorms and Schwartz spaces	14
1.3	Precompact-bounded linear mappings	24
1.4	Properties of Schwartz spaces	29
1.5	Universal Schwartz spaces	48
CHAPTER 2.	VECTOR SEQUENCE SPACES AND ABSOLUTELY SUMMING MAPPINGS	
2.1	Locally convex topologies on vector sequence spaces	52
2.2	Absolutely summing mappings	69
2.3	Duality theorems in sequence spaces	86
2.4	λ -summability of sequences	110
CHAPTER 3.	NUCLEAR SPACES	
3.1	Nuclear linear mappings	133
3.2	Prenuclear seminorms and nuclear spaces	146
3.3	Prenuclear-bounded linear mappings	156
3.4	Quasi-nuclear-bounded linear mappings	161
3.5	Properties of nuclear spaces	175
3.6	Nuclearity of Köthe spaces	190
3.7	Universal nuclear spaces	215
3.8	Supplements - Nuclearity associated with a G_{∞} -space	224
CHAPTER 4.	TENSOR PRODUCTS	
4.1	The π -norm and the ε -norm on a tensor product	233
4.2	The s -norm on tensor products	273
4.3	Linear mappings of finite rank	288
4.4	Locally convex tensor products	300

4.5	Tensor product mappings	318
4.6	Criteria for nuclearity	331
CHAPTER 5. TENSOR PRODUCTS OF ORDERED CONVEX SPACES		
5.1	The ℓ -norm on tensor products	343
5.2	The projective cone and biprojective cone	358
5.3	The ordered projective topology and ordered biprojective topology	374
