These notes cover the major part of an introductory course on formal groups which I gave during the session 1966-67 at King's College London. They are based on a rough draft by A.S.T. Lue. I have not included here the last part of the course, on formal complex multiplication and class field theory, as this subject is now accessible in the literature not only in the original paper but also in the Brighton Proceedings. The literature list on the other hand includes some papers published since I gave my course.

A.F.

CONTENTS

CHAPTER I	PRELIMINARIES	
	§1. Power series rings.....	1
	§2. Homomorphisms.....	16
	§3. Formal groups.....	22
CHAPTER II	LIE THEORY	
	§1. The bialgebra of a formal group.....	29
	§2. The Lie algebra of a formal group.....	43
CHAPTER III	COMMUTATIVE FORMAL GROUPS OF DIMENSION ONE	
	§1. Generalities.....	51
	§2. Classification of formal groups over a separably closed field of characteristic p ...	69
	§3. Galois cohomology.....	86
CHAPTER IV	COMMUTATIVE FORMAL GROUPS OF DIMENSION ONE OVER A DISCRETE VALUATION RING	
	§1. The homomorphisms.....	96
	§2. The group of points of a formal group.....	104
	§3. Division and rational points.....	119
	§4. The Tate module.....	121
	LITERATURE.....	139
