Table of contents

Introduction	1
Chapter I. Siegel modular forms Introduction	
1 The symplectic group	8
2 The Siegel upper half space	11
3 Multiplier systems	13
4 Siegel modular forms	16
5 The theta multiplier system	21
6 The Siegel Φ -operator	29
Appendix to sec.6: Highest weights	33
Chapter II. Theta series with polynomial coefficients	38
1 Coefficient functions and the Gauss transformation	38
2 The general inversion formula	41
3 The action of the theta group on coefficient functions	44
4 The Eichler imbedding	48
5 Theta series with respect to positive definite quadratic forms	51
6 Theta series with harmonic forms as coefficients	57
Appendix to sec.6: The theory of harmonic forms	62
7 Some multiplier systems	66
Chapter III. Singular weights	70
1 Jacobi forms	70
2 Jacobi forms and theta series	75
3 Differential operators	83
4 The classification of singular weights	85
Chapter IV. Singular modular forms and theta series	89
1 The big singular space	89
2 Theta series contained in \mathbf{M}	94

3	Fourier-Jacobi expansion	99
4	The hidden relations	106
5	A combinatorial problem	108
 Chapter V. The fundamental lemma		111
1	Formulation of the lemma	111
2	Reduction to the case of a local ring R	116
3	The case, where the sum of isotropic vectors is isotropic	118
4	The case $r = 2$	122
5	An exceptional isotropic structure The case of a ground field	135
6	An exceptional isotropic structure The case of a ground ring	141
7	The case $n \geq 2r$ in general	149
 Chapter VI. The results		153
1	The representation theorem and theta relations	153
2	An example	159
