Zahlenwerte und Funktionen aus Naturwissenschaften und Technik, Neue Serie

Editor in Chief: W. Martienssen

Vol. I/24: Editor: H. Schopper

At head of title: Landolt-Börnstein. Added t.p.: Numerical data and functional relationships in science and technology.

Tables chiefly in English.

Intended to supersede the Physikalisch-chemische Tabellen by H. Landolt and R. Börnstein of which the 6th ed. began publication in 1950 under title:

Zahlenwerte und Funktionen aus Physik, Chemie, Astronomie, Geophysik und Technik.

Vols. published after v. 1 of group I have imprint: Berlin, New York, Springer-Verlag

Includes bibliographies.

1. Physics--Tables. 2. Chemistry--Tables. 3. Engineering--Tables.

I. Börnstein, R. (Richard), 1852-1913. II. Landolt, H. (Hans), 1831-1910.

III. Physikalisch-chemische Tabellen. IV. Title: Numerical data and functional relationships in science and technology.

## Preface

Parameters of neutron resonances have been published in Volumes I/16A and I/16B and they were updated in Volume I/16C. Because of the great interest in these data many more measurements have been performed since the publication of the last volume. Hence in this volume all the new data are presented together with the previous results. Since the total amount of data is very large only the parameters of the most important resonances could be included in the printed version whereas the data for all resonances are contained in the Supplement available online. Tables indicate where the data for different resonances can be found.

The quality and precision of the data has been considerably improved, partly by the operation of new neutron spectrometers, e.g., the CERN time-of-flight facility recently put into operation and also by the use of new carefully designed neutron capture detectors. Again a considerable effort was made in comparing data from different sources in order to solve some previous discrepancies and establish 'best values', one of the main characteristics of Landoldt- Börnstein publications. In order to compare the data from different sources a comparison of the various experimental installations has been given.

Parameters of neutron resonances are finding increasing interest, not only for scientific problems like the understanding of astrophysical processes but even more so for applications. For the construction and the safety of conventional nuclear reactors such data are essential and for new developments like the thorium-uranium cycle or for nuclear waste transmutation they are indispensable.

The team of authors has been complemented by additional co-authors and thus the competence of the group has been further increased. I would like to thank all authors for their careful work and their great effort to collect data from all internationally available sources.

Thanks are also due to the members of the Landoldt- Börnstein editorial staff who have made major contributions to the successful production of this volume.

Geneva, April 2009

# Contents

1	Introduction (S.I. SUKHORUCHKIN, Z.N. SOROKO) . . . . .	1
1.1	General remarks . . . . .	1
1.2	Neutron time-of-flight spectrometry (F. GUNSING) . . . . .	4
1.2.1	The neutron time-of-flight method . . . . .	4
1.2.2	Broadening effects . . . . .	5
1.3	Characteristic features of pulse time-of-flight facilities (F. GUNSING) . . . . .	8
1.3.1	The n_TOF facility at CERN . . . . .	8
1.4	Neutron capture cross section measurements (F. GUNSING) . . . . .	11
1.4.1	Neutron capture cross section measurement techniques . . . . .	12
1.4.2	Neutron sensitivity . . . . .	15
1.5	Measurements with ORELA, RPI LINAC and DANCE . . . . .	17
1.6	Neutron resonances and $R$ -matrix (F. GUNSING) . . . . .	19
1.6.1	Introduction . . . . .	19
1.6.2	Channel representation . . . . .	20
1.6.3	The wave function in the external region . . . . .	22
1.6.4	The collision matrix $U$ . . . . .	22
1.6.5	The relation between the cross sections and the collision matrix $U$ . . . . .	23
1.6.6	The wave function in the internal region . . . . .	25
1.6.7	Approximations of the $R$ -matrix . . . . .	27
1.7	Priorities of neutron cross section measurements . . . . .	30
1.8	Nuclear data for reactor design, waste transmutation and fuel cycle closing (V.G. PRONYAEV) . . . . .	31
1.8.1	Data for reactors with thermal, intermediate and fast neutron spectra . . . . .	31
1.8.2	Data for innovative reactors with waste transmutation and fuel cycle closing . . . . .	38
1.9	Few-nucleon effects in neutron resonance positions . . . . .	42
1.9.1	Nonstatistical effects in nuclei around $N = 82$ ( $Z = 58$ ) and $N = 50$ . . . . .	42
1.9.2	Observation of nonstatistical effects in $^{206}\text{Pb}$ resonances by Rohr . . . . .	47
1.9.3	Door-way states at high-energy excitations of $^{233}\text{Th}$ . . . . .	50
1.9.4	Correlations in positions of neutron resonances of $^{75}\text{As}$ , $^{123}\text{Sb}$ and other heavy nuclei observed by Ideno, Ohkubo and Belyaev . . . . .	52
1.10	Presentation of the data . . . . .	56
1.11	List of notations, definition of parameters . . . . .	57
1.12	Conclusions . . . . .	60
1.13	Acknowledgments . . . . .	61
