Preface

Formal engineering methods are intended to offer effective means for integration of formal methods and practical software development technologies in the context of software engineering. Their purpose is to provide effective, rigorous, and systematic techniques for significant improvement of software productivity, quality, and tool supportability. In comparison with formal methods, a distinct feature of formal engineering methods is that they emphasize the importance of the balance between the qualities of simplicity, visualization, and preciseness for practicality. To achieve this goal, formal engineering methods must be developed on the basis of both formal methods and existing software technologies in software engineering, and they must serve the improvement of the software-engineering process.

ICFEM 2008 marks the tenth anniversary of the first ICFEM conference, which was held in Hiroshima in 1997. It aims to bring together researchers and practitioners who are interested in the development and application of formal engineering methods to present their latest work and discuss future research directions. The conference offers a great opportunity for researchers in both formal methods and software engineering to exchange their ideas, experience, expectation and to find out whether and how their research results can help advance the state of the art.

This volume contains the papers presented at ICFEM 2008, held October 27–31, 2008 at the Kitakyushu International Conference Center, Kitakyushu City, Japan. There were 62 submissions, each of which was reviewed by three Program Committee members. The committee decided to accept 20 papers based on originality, technical contribution, presentation, and relevance to formal engineering methods. We sincerely thank the Program Committee members and their co-reviewers for their professional work and great effort in the paper reviewing and selection process. We also thank the three keynote speakers, Takuya Katayama, Jeff Offutt, and John Hatcliff, for their contributions to the conference program. Professor Katayama gave a talk on how formal methods can be made acceptable by industry. Professor Offutt presented a talk on how programmers and testers could use formal methods in practice; and Professor Hatcliff spoke about contract-based reasoning for verification and certification of secure information-flow policies in industrial products.

In addition to the conference's main program, two workshops were organized. One was the First IEEE International Workshop on UML and Formal Methods (UML&FM 2008) and the other was the First International Workshop on Formal Methods Education and Training (FMET 2008). We thank the workshop organizers for their great efforts and contributions to the conference.

ICFEM 2008 was jointly organized by Kyushu University and Hosei University. It was sponsored by the ICFEM Organizing Committee and supported by

the IEEE Fukuoka Section, the Software Engineers Association of Japan (SEA), the West Japan Industry and Trade Convention Association and several other organizations. The EasyChair system was used to manage the submissions, reviewing, paper selection, and proceedings production. We would like to thank the EasyChair team for a very useful tool.

Organization

Conference Chairs

General Chair	Keijiro Araki	Kyushu University, Japan
Program Chairs	Shaoying Liu	Hosei University, Japan
	Tom Maibaum	McMaster University, Canada
Publicity Chair	Yoichi Omori	Kyushu University, Japan
Tutorial Chair	Fumiko Nagoya	Hosei University, Japan

Program Committee

Nazareno Aguirre	Colin Fidge	Anders Ravn
Toshiaki Aoki	John Fitzgerald	Ken Robinson
Keijiro Araki	Marcelo Frias	Shin Sahara
David Basin	Stefania Gnesi	Davide Sangiorgi
Michael Butler	Mike Hinchey	Wuwei Shen
Ana Cavalcanti	Soon-Kyeong Kim	Jing Sun
Steve Cha	Peter Gorm Larsen	Koichi Takahashi
Jessica Chen	Kung-Kiu Lau	Testuo Tamai
Yuting Chen	Mark Lawford	T.H. Tse
Yoonsik Cheon	Michael Leuschel	Farn Wang
S.C. Cheung	Xuandong Li	Jim Woodcock
Peter J. Clarke	Zhiming Liu	Wang Yi
Jim Davies	Huaikou Miao	Jian Zhang
Jin Song Dong	Shin Nakajima	Hong Zhu
Zhenhua Duan	Michael Poppleton	

Local Organization

Keijiro Araki
Masumi Toyoshima
Shigeru Kusakabe

External Reviewers

Jean-Raymond Abrial	Gihwon Kwon	Daniel Plagge
Andrew Allen	Woo-Jin Lee	Shengchao Qin
Djuradj Babich	Florian Letombe	Germán Regis
Richard Banach	Hui Liang	Yuxiang Shi
Heung-Seok Chae	Yang Liu	Jane Sinclair

Zhenbang Chen	Paulo Matos	Colin Snook
Wei Chen	Franco Mazzantti	Christoph Sprenger
Alessandro Fantechi	Manuel Mazzara	Jun Sun
Bernd Fischer	Hiroshi Mochio	Kenji Taguchi
Dilian Gurov	Charles Morisset	Toshinori Takai
Thai Son Hoang	Tsz-Hin Ng	Izumi Takeuti

Tetsuo Tamai	University of Tokyo, Japan
Jim Woodcock	University of York, UK

Table of Contents

Invited Talks

How Can We Make Industry Adopt Formal Methods?	1
<i>Takuya Katayama</i>	
Programmers Ain't Mathematicians, and Neither Are Testers	2
<i>Jeff Offutt</i>	
Contract-Based Reasoning for Verification and Certification of Secure Information Flow Policies in Industrial Workflows	3
<i>John Hatcliff</i>	

Specification and Verification

Specifying and Verifying Event-Based Fairness Enhanced Systems	5
<i>Jun Sun, Yang Liu, Jin Song Dong, and Hai H. Wang</i>	
Modelling and Proof of a Tree-Structured File System in Event-B and Rodin	25
<i>Kriangsak Damchoom, Michael Butler, and Jean-Raymond Abrial</i>	

Testing

Conformance Testing Based on UML State Machines: Automated Test Case Generation, Execution and Evaluation	45
<i>Dirk Seifert</i>	
An Approach to Testing with Embedded Context Using Model Checker	66
<i>Lihua Duan and Jessica Chen</i>	
Requirements Coverage as an Adequacy Measure for Conformance Testing	86
<i>Ajitha Rajan, Michael Whalen, Matt Staats, and Mats P.E. Heimdahl</i>	

Verification 1

Decomposition for Compositional Verification	105
<i>Björn Metzler, Heike Wehrheim, and Daniel Wonisch</i>	
A Formal Soundness Proof of Region-Based Memory Management for Object-Oriented Paradigm	126
<i>Florin Craciun, Shengchao Qin, and Wei-Ngan Chin</i>	

Program Models for Compositional Verification 147
Marieke Huisman, Irem Aktug, and Dilian Gurov

Model Checking and Analysis

A Unified Model Checking Approach with Projection Temporal
 Logic 167
Zhenhua Duan and Cong Tian

Formal Analysis of the Bakery Protocol with Consideration of
 Nonatomic Reads and Writes 187
Kazuhiro Ogata and Kokichi Futatsugi

Towards Abstraction for DynAlloy Specifications 207
*Nazareno M. Aguirre, Marcelo F. Frias, Pablo Ponzio,
 Brian J. Cardiff, Juan P. Galeotti, and Germán Regis*

Verification 2

Partial Translation Verification for Untrusted Code-Generators 226
Matthew Staats and Mats P.E. Heimdahl

A Practical Approach to Partiality – A Proof Based Approach 238
Farhad Mehta

A Representative Function Approach to Symmetry Exploitation for
 CSP Refinement Checking 258
Nick Moffat, Michael Goldsmith, and Bill Roscoe

Tools

Probing the Depths of CSP-M: A New FDR-Compliant Validation
 Tool 278
Michael Leuschel and Marc Fontaine

Practical Automated Partial Verification of Multi-paradigm Real-Time
 Models 298
Carlo A. Furia, Matteo Pradella, and Matteo Rossi

Application of Formal Methods

Specifying and Verifying Sensor Networks: An Experiment of Formal
 Methods 318
Jin Song Dong, Jing Sun, Jun Sun, Kenji Taguchi, and Xian Zhang

Correct Channel Passing by Construction	338
<i>Chao Cai, Zongyan Qiu, Xiangpeng Zhao, and Hongli Yang</i>	

Semantics

A Process Semantics for BPMN	355
<i>Peter Y.H. Wong and Jeremy Gibbons</i>	

A Formal Descriptive Semantics of UML	375
<i>Lijun Shan and Hong Zhu</i>	

Author Index	397
