# Acknowledgments

The authors would like to thank H el ene Frankowska for her implicit and explicit contributions to the writing of the book, as well as the members of the “viability group” who participated to its elaboration: Anne Bru-Gorre, Pierre Cardaliaguet, Luxi Chen, Christian Claudel,  Eva Cr uck, Anya D esilles, Ga el D esilles, Olivier Dordan, Halim Doss, luc Doyen, Marie-H el ene Durand, Alexandra Fronville, Thomas Lorenz, Sophie Martin, Juliette Mattioli, Frank Maurin, Alberto Murillo, Laurent Najman, Dominique Pujal, Marc Quincampoix and Nicolas Seube without forgetting Alain Haurie, Mich ele Breton and Georges Zaccour.

We also would like to thank Andr e Giroux for his careful reading of the first part of this book.

The authors want to thank Claire Tomlin, Ian Mitchell, Meeko Oishi, Shankar Sastry, George Pappas, John Lygeros and Craig Evans for fruitful discussions leading to the initial formulation of the landing problem and reachability analysis. The chapter on the traffic and conservations laws greatly benefited from fruitful conversations with Carlos Daganzo, Miroslav Krstic, Michael Cassidy, Benedetto Piccoli, Christian Claudel, Sebastien Blandin and Xavier Litrico.

The simulations using the software of the viability algorithms are due to Patrick Saint-Pierre and the figures to Alexandre Bayen and Patrick Saint-Pierre.

The experiment on the pioneer has been made by  Eva Cr uck, Ga el D esilles, Benjamin Frenais de Coutard, Aur elien Gosselin, Fabrice Leroux at D el egation G en erale   l’Armement (DGA). The design and implementation of the viability algorithm used to compute the optimal trajectories of the submarine was done by Andrew Tinka. The submarine used for the experiments presented in this book was manufactured by the University of Porto, by the team of Joao Sousa, who is gratefully acknowledged for enabling field experimental tests in the United States.

The authors would like to thank Werner M uller for his 6-years patience as well as Catriona Byrne and Martina Bihn for their help for publishing this book.

# Contents

<b>1</b>	<b>Overview and Organization</b>	<b>1</b>
1.1	Motivations	2
1.1.1	Chance and Necessity	2
1.1.2	Motivating Applications	6
1.1.3	Motivations of Viability Theory from Living Systems	7
1.1.4	Applications of Viability Theory to... Mathematics	10
1.2	Main Concepts of Viability Theory	11
1.2.1	Viability Kernels and Capture Basins Under Regulated Systems	12
1.2.2	Viability Kernel and Capture Basin Algorithms	18
1.2.3	Restoring Viability	19
1.3	Examples of Simple Viability Problems	19
1.3.1	Engineering Applications	20
1.3.2	Environmental Illustrations	25
1.3.3	Strange Attractors and Fractals	28
1.4	Organization of the Book	33
1.4.1	Overall Organization	33
1.4.2	Qualitative Concepts	34
1.4.3	Quantitative Concepts	36
1.4.4	First-Order Partial Differential Equations	37
1.4.5	Social Sciences Illustrations	37
1.4.6	Engineering Applications	38
1.4.7	The Four Parts of the Monograph	39

## Part I Viability Kernels and Examples

<b>2</b>	<b>Viability and Capturability</b> . . . . .	43
2.1	Introduction . . . . .	43
2.2	Evolutions . . . . .	45
	2.2.1 Stationary and Periodic Evolutions . . . . .	46
	2.2.2 Transient Evolutions . . . . .	48
	2.2.3 Viable and Capturing Evolutions . . . . .	49
2.3	Discrete Systems . . . . .	50
2.4	Differential Equations . . . . .	53
	2.4.1 Determinism and Predictability . . . . .	53
	2.4.2 Example of Differential Equations: The Lorenz System . . . . .	56
2.5	Regulons and Tyches . . . . .	58
2.6	Discrete Nondeterministic Systems . . . . .	62
2.7	Retroactions of Parameterized Dynamical Systems . . . . .	64
	2.7.1 Parameterized Dynamical Systems . . . . .	64
	2.7.2 Retroactions . . . . .	65
	2.7.3 Differential Inclusions . . . . .	66
2.8	Evolutionary Systems . . . . .	68
2.9	Viability Kernels and Capture Basins for Discrete Time Systems . . . . .	71
	2.9.1 Definitions . . . . .	71
	2.9.2 Viability Kernel Algorithms . . . . .	74
	2.9.3 Julia and Mandelbrot Sets . . . . .	75
	2.9.4 Viability Kernels under Disconnected Discrete Systems and Fractals . . . . .	79
2.10	Viability Kernels and Capture Basins for Continuous Time Systems . . . . .	85
	2.10.1 Definitions . . . . .	85
	2.10.2 Viability Kernels under the Lorenz System . . . . .	87
2.11	Invariance Kernel under a Tychastic System . . . . .	88
2.12	Links between Kernels and Basins . . . . .	92
2.13	Local Viability and Invariance . . . . .	94
2.14	Discretization Issues . . . . .	96
2.15	A Viability Survival Kit . . . . .	98
	2.15.1 Bilateral Fixed Point Characterization . . . . .	99
	2.15.2 Viability Characterization . . . . .	100
	2.15.3 Tangential Characterization . . . . .	101
<b>3</b>	<b>Viability Problems in Robotics</b> . . . . .	105
3.1	Introduction . . . . .	105
3.2	Fields Experiment with the Pioneer . . . . .	105

- 3.3 Safety Envelopes in Aeronautics . . . . . 108
  - 3.3.1 Landing Aircraft: Application of the Capture Basin Algorithm . . . . . 109
  - 3.3.2 Computation of the Safe Flight Envelope and the Viability Feedback . . . . . 115
- 3.4 Path Planning for a Light Autonomous Underwater Vehicle . . . . . 119
  - 3.4.1 Dynamics, Environment and Target . . . . . 119
  - 3.4.2 Experimental Results . . . . . 122
- 4 Viability and Dynamic Intertemporal Optimality . . . . . 125**
  - 4.1 Introduction . . . . . 125
  - 4.2 Intertemporal Criteria . . . . . 129
    - 4.2.1 Examples of Functionals . . . . . 129
    - 4.2.2 Extended Functions and Hidden Constraints . . . . . 131
  - 4.3 Exit and Minimal Time Functions . . . . . 132
    - 4.3.1 Viability and Capturability Tubes . . . . . 132
    - 4.3.2 Exit and Minimal Time Functions . . . . . 134
  - 4.4 Minimal Length Function . . . . . 139
  - 4.5 Attracting and Exponential Lyapunov for Asymptotic Stability . . . . . 142
    - 4.5.1 Attracting Functions . . . . . 142
    - 4.5.2 Exponential Lyapunov Functions . . . . . 145
    - 4.5.3 The Montagnes Russes Algorithm for Global Optimization . . . . . 149
  - 4.6 Safety and Transgression Functions . . . . . 152
  - 4.7 Infinite Horizon Optimal Control and Viability Kernels . . . . . 155
  - 4.8 Intergenerational Optimization . . . . . 158
  - 4.9 Finite Horizon Optimal Control and Capture Basins . . . . . 162
  - 4.10 Occupational Costs and Measures . . . . . 164
  - 4.11 Optimal Control Survival Kit . . . . . 168
  - 4.12 Links Between Viability Theory and Other Problems . . . . . 171
    - 4.12.1 Micro–Macro Dynamic Consistency . . . . . 171
    - 4.12.2 The Epigraphical Miracle . . . . . 172
    - 4.12.3 First-Order Systems of Partial Differential Equations . . . . . 174
    - 4.12.4 Intertemporal Optimization Under State Constraints . . . . . 176
    - 4.12.5 The Viability Strategy for Dynamic Optimization . . . . . 177
- 5 Avoiding Skylla and Charybdis . . . . . 179**
  - 5.1 Introduction: The Zermelo Navigation Problem . . . . . 179
  - 5.2 The Odyssey . . . . . 181

- 5.3 Examples of Concepts and Numerical Computations . . . . . 182
  - 5.3.1 Dynamical Morphological Structure  
of the Environment and its Behavior . . . . . 182
  - 5.3.2 Behavior in the Environment: Minimal Length  
and Persistent Evolutions . . . . . 184
  - 5.3.3 Behavior In and Out the Harbor: Minimal Time,  
Lyapunov and Optimal Evolutions . . . . . 185
- 5.4 Viewgraphs Describing Five Value Functions . . . . . 187
  
- 6 Inertia Functions, Viability Oscillators and Hysteresis . . . . 199**
  - 6.1 Introduction . . . . . 199
  - 6.2 Prerequisites for Intertemporal Optimization . . . . . 202
  - 6.3 Punctuated Equilibria and the Inertia Principle . . . . . 203
  - 6.4 Inertia Functions, Metasystems and Viability Niches . . . . . 207
    - 6.4.1 The Inertia Cascade . . . . . 208
    - 6.4.2 First-Order Inertia Functions . . . . . 210
    - 6.4.3 Inert Regulation and Critical Maps . . . . . 216
    - 6.4.4 Heavy Evolutions . . . . . 217
    - 6.4.5 The Adjustment Map and Heavy Evolutions . . . . . 221
    - 6.4.6 High-Order Metasystems . . . . . 226
    - 6.4.7 The Transition Cost Function . . . . . 231
  - 6.5 Viability Oscillators and Hysterons . . . . . 233
    - 6.5.1 Persistent Oscillator and Preisach Hysteron . . . . . 235
    - 6.5.2 Viability Oscillators and Hysterons . . . . . 238
  - 6.6 Controlling Constraints and Targets . . . . . 242
  
- 7 Management of Renewable Resources . . . . . 247**
  - 7.1 Introduction . . . . . 247
  - 7.2 Evolution of the Biomass of a Renewable Resource . . . . . 248
    - 7.2.1 From Malthus to Verhulst and Beyond . . . . . 248
    - 7.2.2 The Inverse Approach . . . . . 252
    - 7.2.3 The Inert Hysteresis Cycle . . . . . 257
  - 7.3 Management of Renewable Resources . . . . . 262
    - 7.3.1 Inert Evolutions . . . . . 266
    - 7.3.2 Heavy Evolutions . . . . . 267
    - 7.3.3 The Crisis Function . . . . . 269
  
- Part II Mathematical Properties of Viability Kernels**
  
- 8 Connection Basins . . . . . 273**
  - 8.1 Introduction . . . . . 273
  - 8.2 Past and Future Evolutions . . . . . 275
  - 8.3 Bilateral Viability Kernels . . . . . 279
    - 8.3.1 Forward and Backward Viability Kernels  
under the Lorenz System . . . . . 282

8.4	Detection Tubes . . . . .	284
8.4.1	Reachable Maps . . . . .	284
8.4.2	Detection and Cournot Tubes . . . . .	286
8.4.3	Volterra Inclusions . . . . .	289
8.5	Connection Basins and Eupalinian Kernels . . . . .	291
8.5.1	Connection Basins . . . . .	291
8.6	Collision Kernels . . . . .	298
8.7	Particular Solutions to a Differential Inclusion . . . . .	301
8.8	Visiting Kernels and Chaos À la Saari . . . . .	302
8.9	Contingent Temporal Logic . . . . .	305
8.10	Time Dependent Evolutionary Systems . . . . .	309
8.10.1	Links Between Time Dependent and Independent Systems . . . . .	309
8.10.2	Reachable Maps and Detectors . . . . .	312
8.11	Observation, Measurements and Identification Tubes . . . . .	316
8.11.1	Anticipation Tubes . . . . .	317
<b>9</b>	<b>Local and Asymptotic Properties of Equilibria . . . . .</b>	<b>319</b>
9.1	Introduction . . . . .	319
9.2	Permanence and Fluctuation . . . . .	321
9.2.1	Permanence Kernels and Fluctuation Basins . . . . .	322
9.2.2	The Crisis Function . . . . .	326
9.2.3	Cascades of Environments . . . . .	328
9.2.4	Fluctuation Between Monotonic Cells . . . . .	331
9.2.5	Hofbauer-Sigmund Permanence . . . . .	338
9.2.6	Heteroclines and Homoclines . . . . .	341
9.3	Asymptotic Behavior: Limit Sets, Attractors and Viability Kernels . . . . .	344
9.3.1	Limit Sets and Attractor . . . . .	344
9.3.2	Attraction and Cluster Basins . . . . .	346
9.3.3	Viability Properties of Limit Sets and Attractors . . . . .	351
9.3.4	Nonemptyness of Viability Kernels . . . . .	353
9.4	Lyapunov Stability and Sensitivity to Initial Conditions . . . . .	354
9.4.1	Lyapunov Stability . . . . .	354
9.4.2	The Sensitivity Functions . . . . .	355
9.4.3	Topologically Transitive Sets and Dense Trajectories . . . . .	358
9.5	Existence of Equilibria . . . . .	360
9.6	Newton's Methods for Finding Equilibria . . . . .	361
9.6.1	Behind the Newton Method . . . . .	361
9.6.2	Building Newton Algorithms . . . . .	363
9.7	Stability: The Inverse Set-Valued Map Theorem . . . . .	365
9.7.1	The Inverse Set-Valued Map Theorem . . . . .	365
9.7.2	Metric Regularity . . . . .	367

- 9.7.3 Local and Pointwise Norms of Graphical Derivatives . . . . . 370
- 9.7.4 Norms of Derivatives and Metric Regularity . . . . . 371

**10 Viability and Capturability Properties of Evolutionary Systems . . . . . 375**

- 10.1 Introduction . . . . . 375
- 10.2 Bilateral Fixed Point Characterization of Kernels and Basins . . . . . 377
  - 10.2.1 Bilateral Fixed Point Characterization of Viability Kernels . . . . . 379
  - 10.2.2 Bilateral Fixed Point Characterization of Invariance Kernels . . . . . 382
- 10.3 Topological Properties . . . . . 382
  - 10.3.1 Continuity Properties of Evolutionary Systems . . . . . 382
  - 10.3.2 Topological Properties of Viability Kernels and Capture Basins . . . . . 387
- 10.4 Persistent Evolutions and Exit Sets . . . . . 392
  - 10.4.1 Persistent and Minimal Time Evolutions . . . . . 392
  - 10.4.2 Temporal Window . . . . . 396
  - 10.4.3 Exit Sets and Local Viability . . . . . 396
- 10.5 Viability Characterizations of Kernels and Basins . . . . . 399
  - 10.5.1 Subsets Viable Outside a Target . . . . . 399
  - 10.5.2 Relative Invariance . . . . . 401
  - 10.5.3 Isolated Subsets . . . . . 403
  - 10.5.4 The Second Fundamental Characterization Theorem . . . . . 405
  - 10.5.5 The Barrier Property . . . . . 407
- 10.6 Other Viability Characterizations . . . . . 411
  - 10.6.1 Characterization of Invariance Kernels . . . . . 411
  - 10.6.2 Characterization of Connection Basins . . . . . 413
- 10.7 Stability of Viability and Invariance Kernels . . . . . 416
  - 10.7.1 Kernels and Basins of Limits of Environments . . . . . 416
  - 10.7.2 Invariance and Viability Envelopes . . . . . 420
- 10.8 The Hard Version of the Inertia Principle . . . . . 422
- 10.9 Parameter Identification: Inverse Viability and Invariance Maps . . . . . 427
  - 10.9.1 Inverse Viability and Invariance . . . . . 427
  - 10.9.2 Level Tubes of Extended Functions . . . . . 429
- 10.10 Stochastic and Tyochastic Viability . . . . . 433

**11 Regulation of Control Systems . . . . . 437**

- 11.1 Introduction . . . . . 437
- 11.2 Tangential Conditions for Viability and Invariance . . . . . 440
  - 11.2.1 The Nagumo Theorem . . . . . 443
  - 11.2.2 Integrating Differential Inequalities . . . . . 445

- 11.2.3 Characterization of the Viability Tangential Condition . . . . . 447
- 11.2.4 Characterization of the Invariance Tangential Condition . . . . . 451
- 11.3 Fundamental Viability and Invariance Theorems for Control Systems . . . . . 453
  - 11.3.1 The Regulation Map for Control Systems . . . . . 453
  - 11.3.2 The Fundamental Viability Theorem . . . . . 454
  - 11.3.3 The Fundamental Invariance Theorem . . . . . 457
- 11.4 Regulation Maps of Kernels and Basins . . . . . 460
- 11.5 Lax–Hopf Formula for Capture Basins . . . . . 465
  - 11.5.1  $P$ -Convex and Exhaustive Sets . . . . . 465
  - 11.5.2 Lax–Hopf Formulas . . . . . 468
  - 11.5.3 Viability Kernels Under  $P$ -Valued Micro–Macro Systems . . . . . 472
- 11.6 Hamiltonian Characterization of the Regulation Map . . . . . 475
- 11.7 Deriving Viable Feedbacks . . . . . 480
  - 11.7.1 Static Viable Feedbacks . . . . . 480
  - 11.7.2 Dynamic Viable Feedbacks . . . . . 483
- 12 Restoring Viability . . . . . 485**
  - 12.1 Introduction . . . . . 485
  - 12.2 Viability Multipliers . . . . . 485
    - 12.2.1 Definition of Viability Multipliers . . . . . 485
    - 12.2.2 Viability Multipliers with Minimal Norm . . . . . 486
    - 12.2.3 Viability Multipliers and Variational Inequalities . . . . . 488
    - 12.2.4 Slow Evolutions of Variational Inequalities . . . . . 491
    - 12.2.5 Case of Explicit Constraints . . . . . 491
    - 12.2.6 Meta Variational Inequalities . . . . . 494
    - 12.2.7 Viability Multipliers for Bilateral Constraints . . . . . 495
    - 12.2.8 Connectionist Complexity . . . . . 497
    - 12.2.9 Hierarchical Viability . . . . . 501
  - 12.3 Impulse and Hybrid Systems . . . . . 503
    - 12.3.1 Runs of Impulse Systems . . . . . 503
    - 12.3.2 Impulse Evolutionary Systems . . . . . 507
    - 12.3.3 Hybrid Control Systems and Differential Inclusions . . . . . 510
    - 12.3.4 Substratum of an Impulse System . . . . . 512
    - 12.3.5 Impulse Viability Kernels . . . . . 516
    - 12.3.6 Stability Properties . . . . . 518
    - 12.3.7 Cadenced Runs . . . . . 519

## Part III First-Order Partial Differential Equations

<b>13</b>	<b>Viability Solutions to Hamilton–Jacobi Equations</b>	523
13.1	Introduction	523
13.2	From Duality to Trinity	524
13.3	Statement of the Problem	527
	13.3.1 Lagrangian and Hamiltonian	527
	13.3.2 The Viability Solution	530
13.4	Variational Principle	531
	13.4.1 Lagrangian Microsystems	531
	13.4.2 The Variational Principle	532
13.5	Viability Implies Optimality	538
	13.5.1 Optimal Evolutions	538
	13.5.2 Dynamic Programming under Viability Constraints	539
13.6	Regulation of Optimal Evolutions	541
13.7	Aggregation of Hamiltonians	544
	13.7.1 Aggregation	544
	13.7.2 Composition of a Hamiltonian by a Linear Operator	546
13.8	Hamilton–Jacobi–Cournot Equations	551
13.9	Lax–Hopf Formula	554
13.10	Barron–Jensen/Frankowska Viscosity Solution	557
<b>14</b>	<b>Regulation of Traffic</b>	563
14.1	Introduction	563
14.2	The Transportation Problem and its Viability Solution	566
14.3	Density and Celerity Flux Functions	571
14.4	The Viability Traffic Function	579
14.5	Analytical Properties of the Viability Traffic Functions	584
	14.5.1 Cauchy Initial Conditions	586
	14.5.2 Lagrangian Traffic Conditions	587
	14.5.3 Combined Traffic Conditions	590
14.6	Decreasing Envelopes of Functions	592
14.7	The Min-Inf Convolution Morphism Property and Decreasing Traffic Functions	595
14.8	The Traffic Regulation Map	599
14.9	From Density to Celerity: Shifting Paradigms	601
<b>15</b>	<b>Illustrations in Finance and Economics</b>	603
15.1	Introduction	603
15.2	Uncovering Implicit Volatility in Macroscopic Portfolio Properties	605
	15.2.1 Managing a Portfolio under Unknown Volatility	607
	15.2.2 Implicit Portfolio Problem	608

15.2.3	Emergence of the Tychastic Domain and the Cost Function . . . . .	611
15.2.4	The Viability Portfolio Value . . . . .	612
15.2.5	Managing the Portfolio . . . . .	615
15.3	Bridging the Micro–Macro Economic Information Divide . . .	620
15.3.1	Two Stories for the Same Problem . . . . .	620
15.3.2	The Viability Economic Value . . . . .	624
<b>16</b>	<b>Viability Solutions to Conservation Laws . . . . .</b>	<b>631</b>
16.1	Introduction . . . . .	631
16.2	Viability Solutions to Conservation Laws . . . . .	631
16.2.1	Viability Solution as Solution to Burgers Equation . . . . .	635
16.2.2	Viability and Tracking Solutions . . . . .	637
16.2.3	Piecewise Cauchy Conditions . . . . .	641
16.2.4	Dirichlet Boundary Conditions . . . . .	648
16.2.5	Piecewise Dirichlet Conditions . . . . .	653
16.2.6	Cauchy/Dirichlet Condition . . . . .	654
16.2.7	Additional Eulerian Conditions . . . . .	659
16.2.8	Viability Constraints . . . . .	662
16.2.9	Lagrangian Conditions . . . . .	664
16.2.10	Regulating the Burgers Controlled Problem . . . . .	667
16.3	The Invariant Manifold Theorem . . . . .	675
<b>17</b>	<b>Viability Solutions to Hamilton–Jacobi–Bellman Equations . . . . .</b>	<b>681</b>
17.1	Introduction . . . . .	681
17.2	Viability Solutions to Hamilton–Jacobi–Bellman Problems . . . . .	682
17.3	Valuation Functions and Viability Solutions . . . . .	685
17.3.1	A Class of Intertemporal Functionals . . . . .	685
17.3.2	Valuation Functions and Viability Solutions . . . . .	687
17.3.3	Existence of Optimal Evolution . . . . .	692
17.3.4	Dynamic Programming Equation . . . . .	696
17.4	Solutions to Hamilton–Jacobi Equation and Viability Solutions . . . . .	698
17.4.1	Contingent Solution to the Hamilton–Jacobi Equation . . . . .	698
17.4.2	Barron–Jensen/Frankowska Solution to the Hamilton–Jacobi Equation . . . . .	701
17.4.3	The Regulation Map of Optimal Evolutions . . . . .	704
17.5	Other Intertemporal Optimization Problems . . . . .	704
17.5.1	Maximization Problems . . . . .	704
17.5.2	Two Other Classes of Optimization Problems . . . . .	705
17.6	Summary: Valuation Functions of Four Classes of Intertemporal Optimization Problems . . . . .	708

**Part IV Appendices**

**18 Set-Valued Analysis at a Glance** ..... 713

  18.1 Introduction ..... 713

  18.2 Notations ..... 713

  18.3 Set-Valued Maps ..... 719

    18.3.1 Graphical Approach ..... 722

    18.3.2 Amalgams of Set-Valued Maps ..... 724

  18.4 Limits of Sets ..... 727

    18.4.1 Upper and Lower Limits ..... 727

    18.4.2 Upper Semicompact and Upper and Lower  
    Semi-Continuous Maps ..... 729

    18.4.3 Tangent Cones ..... 731

    18.4.4 Polar Cones ..... 734

    18.4.5 Projectors ..... 735

    18.4.6 Normals ..... 737

  18.5 Graphical Analysis ..... 738

    18.5.1 Graphical Convergence of Maps ..... 738

    18.5.2 Derivatives of Set-Valued Maps ..... 739

    18.5.3 Derivative of Numerical Set-Valued Maps ..... 741

  18.6 Epigraphical Analysis ..... 742

    18.6.1 Extended Functions ..... 742

    18.6.2 Epidifferential Calculus ..... 747

    18.6.3 Generalized Gradients ..... 751

    18.6.4 Tangent and Normal Cones to Epigraphs ..... 753

  18.7 Convex Analysis: Moreau–Rockafellar Subdifferentials ..... 755

  18.8 Weighted Inf-Convolution ..... 762

  18.9 The Graal of the Ultimate Derivative ..... 765

**19 Convergence and Viability Theorems** ..... 769

  19.1 Introduction ..... 769

  19.2 The Fundamental Convergence Theorems ..... 770

  19.3 Upper Convergence of Viability Kernels  
  and Regulation Maps ..... 774

    19.3.1 Prolongation of Discrete Time Evolutions ..... 774

    19.3.2 Upper Convergence ..... 776

  19.4 Proofs of Viability Theorems ..... 781

    19.4.1 Necessary Condition for Viability ..... 781

    19.4.2 The General Viability Theorem ..... 782

    19.4.3 The Local Viability Theorem ..... 783

    19.4.4 Proof of the Viability Theorem 11.3.4 ..... 785

    19.4.5 Pointwise Characterization of Differential  
    Inclusions ..... 786

**References** ..... 789

**Index** ..... 797

# List of Figures

1.1	The mathematical translation of “chance”.	3	2.3	Translations and Concatenations.	69
1.2	The mathematical translation of “necessity”.	3	2.4	Julia sets: Douady Rabbit and Fatou Dust.	78
1.3	Graphs of a set-valued map and of the inverse map.	13	2.5	Computation of the Julia set.	79
1.4	Parameterized Systems.	14	2.6	Example: Cantor Ternary Map.	80
1.5	Illustration of a viability kernel.	16	2.7	Viability Kernel under the Quadratic Map.	81
1.6	Illustration of a capture basin.	17	2.8	The Sierpinski Gasket.	83
1.7	Feedbacks.	18	2.9	Viability Outside a Target and Isolated Target.	87
1.8	Minimal length and exit time functions.	21	2.10	Viability Kernels of a Cube $K$ under Forward and Backward Lorenz Systems.	87
1.9	Minimal time, Lyapunov and optimal value functions.	22	2.11	Backward Viability Kernel and Viable Evolution.	88
1.10	Isolines of the minimal time, Lyapunov and value functions.	22	2.12	Figure of an Invariance Kernel.	90
1.11	Experiment of the viability algorithm for autonomous navigation.	23	2.13	Figure of an Absorption Basin.	90
1.12	Wind-optimal high altitude routes.	23	2.14	Schematic Representation of Tangent Cones.	102
1.13	Persistent evolutions of drifters and their exit sets.	24	2.15	Schematic Illustration of the Regulation Map.	103
1.14	Model of the touch down manoeuver of an aircraft.	24	3.1	Pioneer Robot used for the field experiment.	106
1.15	The “Touch down safety envelope”.	25	3.2	Computation of the feedback for the Pioneer Robot.	107
1.16	Permanence Basin of a Sub-environment.	26	3.3	Aircraft dynamic model.	109
1.17	Level-sets of the transition function.	28	3.4	Autoland Profile.	111
1.18	Viable evolutions in the backward viability kernel.	29	3.5	Trajectories of evolutions with constant thrust.	113
1.19	Fluctuation basin of the Lorenz system.	30	3.6	Trajectories of evolutions with constant thrust.	114
1.20	Julia sets and fractals.	31	3.7	Capture basin, thrust and angle of attack feedback.	115
1.21	Julia sets and filled-in Julia sets.	31	3.8	Graph of the evolution starting from $A$ .	117
1.22	The set of roots of nonlinear equations.	32	3.9	Graph of the evolution starting from $B$ .	118
2.1	Discrete Logistic System.	52	3.10	Current Map and Isochrones of the Minimal Time Function.	120
2.2	Trajectories of six evolutions of the Lorenz system.	57	3.11	Sample of generated trajectories.	120
			3.12	Minimal time function ( <i>left</i> ) and feedback map ( <i>right</i> ).	121

3.13	Light Autonomous Underwater Vehicle (LAUV). . . . .	122	6.3	Graph of the Heavy Evolution.	225
3.14	Minimal time evolution of the submarine. . . . .	123	6.4	Preisach's Hysteron and Evolution. . . . .	237
3.15	Deviation between planned and actual trajectory. . . . .	124	6.5	Inert Hysteresis Cycle. . . . .	241
			6.6	Graph of the Inert Hysteresis Cycle. . . . .	242
4.1	Hamilton–Jacobi–Bellman–Isaacs . . . . .	126	7.1	Malthus, Verhulst and Heavy Feedbacks. . . . .	251
4.2	Epigraph and hypograph. . . . .	132	7.2	Inertia Function. . . . .	254
4.3	Illustration of a tube. . . . .	132	7.3	Viability Kernel and Inert Evolution. . . . .	256
4.4	Hypograph of an upper exit function and graph of the viability tube. . . . .	136	7.4	Heavy evolution. . . . .	257
			7.5	Graph of the Inert Hysteretic Evolution Computed Analytically. . . . .	258
4.5	Epigraph of a lower minimal time function and graph of the capturability tube. . . . .	136	7.6	Graph of the Inert Hysteretic Evolution and its Control Computed by the Viability Kernel Algorithm. . . . .	259
4.6	Examples of Attracting and Lyapunov Functions. . . . .	145	7.7	Sections of the Inertia Function for Several Growth Rate Feedbacks. . . . .	264
4.7	The Montagnes Russes Algorithm. . . . .	150	7.8	Crisis Function. . . . .	270
4.8	Example 1. . . . .	151			
4.9	Example 2. . . . .	151			
4.10	Example 3. . . . .	151			
5.1	Charybdis and Scylla. . . . .	181	8.1	Operations on Evolutions. . . . .	276
5.2	Viability Kernel and Capture Basin. . . . .	182	8.2	Illustration of the Proof of Theorem 8.3.2. . . . .	280
5.3	Viability Kernel outside the Harbor and close up view of the Viability Kernel of the Harbor. . . . .	183	8.3	Example of viability kernels for the forward and backward Lorenz systems when $\sigma > b + 1$ . . . . .	283
			8.4	Typical, atypical and falsifying elements. . . . .	307
5.4	Equilibrium and Exit Sets. . . . .	183	8.5	Reachable Maps. . . . .	312
5.5	Viable Minimal Length and Non-Viable Persistent Evolutions. <i>Since the equilibria are contained in the finite length viability kernel (see Definition 4.4.1, p.140), some finite length evolution converges to them. Figure 5.4, p. 184 shows the trajectories of some evolutions reaching equilibria. In the same way, Fig. 5.4 (Right, p. 184) displays persistent evolutions reaching in finite time the exit set through which it leaves K.</i> . . . . .	184	8.6	Reachable Tubes. . . . .	313
			8.7	Detectors. . . . .	314
5.6	Comparison of the Trajectories. . . . .	185	9.1	Monotonic Fluctuations, Proposition 9.2.16. . . . .	334
5.7	Comparison of Projections of the Indicator. . . . .	186	9.2	The Viability Kernel of the Monotonic Cell $K^{-+-}$ under the Lorenz System. . . . .	334
5.8	Comparison of the Projections of the Angular Regulation Map. . . . .	186	9.3	Viability Kernels of Monotonic Cells under the Lorenz System. . . . .	335
5.9	Comparison of the Projections of the Velocity Regulation Map. . . . .	186	9.4	Fluctuation Basin under the Lorenz System. . . . .	337
			9.5	Fluctuation Basin under the Lorenz System. . . . .	337
5.10	The Minimal Length Function. . . . .	188	9.6	Proof of Lemma 9.2.17. . . . .	338
5.11	The Exit Time Function. . . . .	190	9.7	Viability Kernels around Equilibria. . . . .	344
