Contents

Introduction	1
Michelle Goman	
Quaternary Stratigraphy of the La Playa Archaeological Site (SON F:10:3), Northern Sonora, Mexico	3
Brett T. McLaurin, Aileen C. Elliott, James T. Watson and Maria Elisa Villalpando Canchola	
Genesis of an Artifact Layer: Natural and Cultural Processes at the La Playa Archaeological Site, Sonora, Mexico	21
Aileen C. Elliott, Brett T. McLaurin, James T. Watson and Maria Elisa Villalpando Canchola	
The Great Red River Raft and its Sedimentological Implications	35
Nalini Torres and Danny W. Harrelson	
Erratum	E1

Contributors

Aileen C. Elliott is an undergraduate student at Bloomsburg University of Pennsylvania where she is pursuing a double major in anthropology and geology.

Michelle Goman has spent the past 25 years studying wetland and lacustrine sedimentary archives in the United States, Mexico and Kenya. She received her Ph.D. in physical geography from the University of California, Berkeley. After spending the past decade running the Quaternary Research Laboratory at the Dept. of Earth and Atmospheric Sciences at Cornell University, Dr. Goman is currently faculty at Sonoma State University in the Department of Geography and Global Studies where she also runs the Sonoma Quaternary Lab (SQUAL). Dr. Goman was most recently the Chair of the Paleoenvironmental Change Specialty group of the Association of American Geographers and also served as a board member of the Biogeography Specialty group of Association of American Geographers. Dr. Goman organized the session “Reconstructing Interactions between Humans and the Natural Environment during the Holocene” at the 2010 Geological Society of America Meeting in Denver and is volume editor for the SpringerBriefs “Reconstructing Human-Landscape Interactions”.

Danny W. Harrelson received his B.S. 1976 and M.S. 1981 degrees in geology from the University of Southern Mississippi, Hattiesburg, Ms. He has a total of 33 years of experience working for state and federal government, private industry (oil and mineral exploration) and consulting firms (oil service, geotechnical and environmental). Mr. Harrelson has authored or co-authored more than 100 papers and abstracts on a variety of geologic subjects, published in numerous professional journals. Currently, he is employed as a research geologist for the U. S. Army Engineer Research Development Center, Geotechnical and Structures Laboratory, Vicksburg, Mississippi.

Brett T. McLaurin is a sedimentologist-stratigrapher who received a Ph.D. from the University of Wyoming. He currently is an Assistant Professor in the Department of Geography and Geosciences at Bloomsburg University of Pennsylvania.

Nalini Torres received her B.S. and M.S. degrees in geography and marine geology from the University of Puerto Rico in 1987 and 1993, respectively. Ms. Torres is pursuing a Ph.D. in Physical Geography at the Department of Geography, University of Florida in Gainesville, regarding surface/groundwater interactions. She is a registered Professional Geologist in the state of Mississippi, and a member of the Association of Engineering Geologist and the Geological Society of America. Ms. Torres joined the ERDC Engineering Geology Branch in May 1994, as a geologist in the Hydrogeology and Site Characterization Section and has authored or co-authored several papers and abstracts on geologic research subjects. Currently, she is employed as a research geologist for the U. S. Army Engineer Research Development Center, Geotechnical and Structures Laboratory, Vicksburg, Mississippi.

Maria Elisa Villalpando Canchola is an Archaeologist and Head of Research for the Instituto Nacional de Antropología e Historia, Centro Sonora. She has worked extensively throughout Sonora. Her research interests are diverse and include the preservation of Mexico's national cultural patrimony, the archaeology of coastal groups, the Trincheras phenomenon, and early farming adaptations in the region.

James T. Watson received his Ph.D. in Anthropology at the University of Nevada Las Vegas in 2005. He currently holds appointments as Assistant Curator of Bioarchaeology at the Arizona State Museum and Assistant Professor of Anthropology in the School of Anthropology at the University of Arizona. His research examines health and disease in prehistoric populations through their skeletal remains and he is specifically interested in understanding prehistoric human adaptations in desert ecosystems and the role local resources play in the adoption of agriculture and their impact on health.
