Preface

The 5th Conference on Multimedia Communications, Services and Security, MCSS 2012, reflected the growing number of applications of innovative ICT technologies in the area of public security.

Of special importance are the technologies and applications which help to increase the privacy of citizens and to protect sensitive data. The conference continues to present research and development activities contributing to theoretical and experimental aspects of the considered domain.

The following areas were of main interest at MCSS 2012:

- Privacy and data protection using digital watermarking and other technologies
- Object and threat detection
- Data protection and distribution
- Human—centric multimedia analysis and synthesis
- Cybercrime—threats detection and counteracting

Similarly to the previous editions of the conference, oral sessions were accompanied by demonstration and poster sessions. Demonstration sessions at MCSS are a very good opportunity to present and discuss the outcomes and solutions of the performed research and to experience in practice the emerging implementations and research prototypes.

The conference was again an occasion for the exchange of knowledge among specialists involved in multimedia and security research.
