Acknowledgments

The papers presented in this volume represent the culmination of several months' of planning and work. Of course, no effort of this nature is a sole enterprise and so I would like to take this opportunity to thank my graduate research assistant, Shawn Roncin, who ably assisted me in bringing to fruition the workshop that was the inspiration for this volume, and my graduate research assistant QianQian Yu, who provided wonderful support to participants during the workshop itself. I would be remiss if I were not to thank the workshop sponsors, the Social Sciences and Humanities Research Council of Canada, and the Vancouver Institute of Visual Analytics. Without their generous support, the workshop would not have taken place. To each of the participants go my thanks for sharing a passion for the challenges of effectively managing financial records, information, and data for improved risk analysis and management, and for coming to the workshop to share their ideas and knowledge on the subject. Finally, my thanks for the excellent editorial assistance I received from my graduate administrative assistant, Helen Halbert, and the staff at Springer.

Contents

1	Records and Information Management for Financial Analysis and Risk Management	1
1.1	Financial Decision Process: Theory and Practice	1
1.2	Terminology	3
1.3	Governance	5
1.4	Analytics	7
1.5	Long-Term Digital Preservation	9
1.6	Conclusion	11
	References	12
2	Monitoring Financial Stability in a Complex World	15
2.1	Introduction	16
2.2	Legacy Financial Supervision	16
2.2.1	Firm-Level Supervision and Disintermediation	17
2.2.2	Financial Innovation and the Complexity of Data Management	19
2.2.3	Scalability of Data Management	21
2.3	Systemic Supervision and the Network of Counterparty Claims	28
2.3.1	Networks and Information	28
2.3.2	An Example: Rehypothecation of Repo Collateral	30
2.3.3	Implications for Supervisory Implementation	33
2.4	Summary	39

About the Contributors

Willi Brammertz obtained his Ph.D. in Economics from the University of Zurich. In 1992, together with Dr. Jürg B. Winter, he founded IRIS integrated risk management AG. At first, he focused on consulting projects in the area of Asset and Liability Management, implementing external systems at several banks. Beginning in 1996, he applied the insights from his doctoral thesis as the Chief Technology Officer by creating riskproTM, a complete analysis platform for banks and insurance companies. In 2008, Iris was sold to FRSGlobal, a leading provider of regulatory reporting in the banking sector. Dr. Brammertz is now an independent consultant and regularly speaks at international conferences on risk management and regulatory compliance. In 2009, Wiley & Sons published Dr. Brammertz's first book, "Unified Financial Analysis—The Missing Links of Finance". Dr. Brammertz wrote his book, which is co-authored by distinguished colleagues, based on his more than 20 years of experience in financial analysis. Besides being a consultant to banks, insurance companies, and software vendors, Dr. Brammertz is an active member of the Founding Committee for the National Institute of Finance whose proposals were adopted as part of the Dodd-Frank Bill under the name of Office of Financial Research (OFR).

Thomas Dang is currently a Masters student in Computer Science, specializing in Human-Computer Interaction at the University of British Columbia and is a researcher at the Centre for the Investigation of Financial Electronic Records (CIFER). Thomas is also a member of the Visual Cognition Laboratory and the Media and Graphics Interdisciplinary Centre at the University of British Columbia. His M.Sc. research topic is in the domain of visualization and analysis of large, heterogeneous bodies of information in finance.

Mark D. Flood did his undergraduate work at Indiana University in Bloomington, where he majored in finance (B.S., 1982), and German and economics (B.A., 1983). In 1990, he earned his Ph.D. in finance from the Graduate School of Business at the University of North Carolina at Chapel Hill. He has taught finance and business at universities in the U.S. and Canada, and worked as an economist

and financial economist on issues of regulatory policy and risk management at the Federal Reserve Bank of St. Louis, the Office of Thrift Supervision, the Federal Housing Finance Board, and the Federal Housing Finance Agency. He was a founding member of the Committee to Establish a National Institute of Finance. He is currently a Senior Policy Advisor in the U.S. Department of the Treasury, working for the Office of Financial Research. His research has appeared in a number of journals, including the *Review of Financial Studies*, *Quantitative Finance*, the *Journal of International Money and Finance*, and the *St. Louis Fed's Review*.

Alexandros-Andreas Kyrtis is a Professor of Sociology at the University of Athens in the Department of Political Science and Public Administration. His current research focuses on the analysis of the techno-organizational backstage of financial markets, financial representations, and risk-management processes in complex projects. He has been academic visitor at the Massachusetts Institute of Technology, the London School of Economics and Political Science, the University of Edinburgh, the Institute of Advanced Studies on Science, Technology and Society in Graz, and the Swiss Federal Institute of Technology in Zurich (ETH Zurich). He has also been an adviser to Greek banks, to the Hellenic Bankers Association, to IT companies with projects in the financial sector, and to the Greek General Secretariat for Research and Technology. His latest publications include “Financial Markets and Organizational Technologies: System Architectures, Practices and Risks in the Era of Deregulation” (edited volume, Palgrave Macmillan, 2010) and “Insurance of Techno-Organizational Ventures and Procedural Ethics: Lessons from the Deepwater Horizon Explosion” *Journal of Business Ethics* (2011) 103:45–61.

Victoria L. Lemieux is an Assistant Professor at the University of British Columbia (UBC). Her interest in financial records and their relationship to risk stems from her 1999–2001 doctoral research on the information-related causes of the Jamaican Banking Crisis (University College London 2002). Following completion of her doctoral research, Dr. Lemieux joined Credit Suisse, a global investment bank. In 2008, she established the Centre for the Investigation of Financial Electronic Records (CIFER). She also serves as a Canadian representative to the International Standards Organization's Technical Committee on Financial Services (TC68) and is the Acting Director of UBC's Media and Graphics Interdisciplinary Centre (MAGIC).

Lior Limonad has been a researcher with the Centre for the Investigation of Financial Electronic Records (CIFER) since October 2009 and is also a researcher at the IBM Haifa Research Lab. In the relatively short time that Lior has been a member of the CIFER research team, he has made invaluable contributions to the progress of research on financial records and information management. Specifically, he has helped to identify tools to move from informal (text-based) descriptions of information failures in the collapse of Lehman Brothers to a formal language with

which to model the collapse and failure. This has been no small task, as Lior has had to quickly gain a sufficient understanding of basic archival and financial concepts and theories (e.g., the financial derivatives supply chain and various flavours of derivative products that contributed to the collapse of Lehman Brothers) to guide the team in identifying and defining key constructs in our model.

Allan I. Mendelowitz did his undergraduate work at Columbia University where he majored in Economics (A.B., 1966). In 1971, he earned his Ph.D. degree in Economics from Northwestern University. Most recently he served two terms on the board of directors of the Federal Housing Finance Board, and was the board's chairman from 2000 to 2001. Previously, he was the executive director of the U.S. Trade Deficit Review Commission, a congressionally appointed bipartisan panel. Dr. Mendelowitz has also served as the vice president of the Economic Strategy Institute, supervising research on trade policy, international competitiveness, and telecommunications policy, and as the executive vice president of the Export-Import Bank of the United States. From 1981 to 1995, Dr. Mendelowitz was the managing director for international trade, finance, and economic competitiveness at the U.S. Government Accountability Office. He is a co-founder and co-leader of the Committee to Establish the National Institute of Finance and a key influencer of U.S. policy in the domain of financial information management.

Kafui Monu is a post-doctoral researcher at the University of British Columbia's Sauder School of Business, specializing in Management Information Systems and has been a researcher at the Centre for the Investigation of Financial Records since May 2010. His main research interest is involving users in the system analysis process by representing their view of their work. This research focuses on developing a technique to represent the users' view of their behaviour in the organization, and is called the Organizational Actor Modeling Methodology. This technique closes the gap between the user and the developer in the software development process by providing a structured model of the users' unstructured data. The work has been used to successfully represent scenarios in disaster management and retail.

William Nichols is Associate Director, Information Standards at the Office of Financial Research, U.S. Department of the Treasury. Prior to joining the Treasury, he worked as an information architect at one of the world's largest hedge funds. His career has had a strong emphasis in the areas of standards; he is currently active on multiple ISO Committees, and has been chair and vice chair of both international and U.S. standards organizations addressing the financial industry. Nichols has spent over 25 years at the intersection of technology and financial services. He was co-founder and CEO of a corporate governance research firm acquired by Thomson Financial in 1995, after which he spent seven years at Thomson. He has provided expert testimony on online traffic and advertising models, and for several years

managed the consolidation of portfolio companies for venture-backed entities. He has also provided consulting services on compliance-related product development for anti-money laundering offerings.

Anya C. Savikhin is an Assistant Professor at the University of Wisconsin-Madison in the School of Human Ecology. Savikhin uses the methodology of experimental economics to explore behaviour and decision-making in different contexts. Savikhin's research centers on developing and experimentally evaluating the impact of novel interactive visual analytic tools on economic decision-making and risk choice. To date, Savikhin has investigated decision-making in a wide range of contexts, including financial portfolio selection, information overload during the consumer search process, and optimal choice under uncertainty. Savikhin is also affiliated with the Vernon Smith Experimental Economics Laboratory at Purdue University, the Center for Financial Security at the University of Wisconsin-Madison, and the Financial Literacy Center at the George Washington School of Business. Savikhin received her Ph.D in Economics from Purdue University in 2010 and received additional training at the University of Chicago Becker Friedman Institute for Research in Economics.

Carson Woo is Stanley Kwok Professor of Business at the Sauder School of Business, the University of British Columbia, and an associate member of the Department of Computer Science. He received his B.Sc., M.Sc., and Ph.D. degrees in Computer Science from the University of Toronto. His research interests include conceptual modelling, systems analysis and design, and requirements engineering. In particular, he is interested in using conceptual models to help management in digesting information and deriving knowledge through documentation, investigation, and planning. Dr. Woo is editor of Information Technology and Systems Abstracts Journal at the Social Science Research Network (ITS-SSRN), and serves on the editorial board of ACM Transactions on Management Information Systems and Requirements Engineering. He has served as President of Workshop on Information Technology and Systems (WITS), Inc. (2004–2006), and chair of the ACM Special Interest Group on Office Information Systems (SIGOIS) 1991–1995.

Sherry L. Xie MLIS (McGill University), MAS and Ph.D. candidate, School of Library, Archival and Information Studies (SLAIS), University of British Columbia (UBC), was a subject librarian before entering the field of archival science and records management, and has worked in areas of archival administration and records management in academic and governmental organizations. She has been involved in research on the long-term preservation of authentic electronic records since 2004 and has contributed to research on digital records forensics. Her recent publications include, "Digital Records Management: The Lacking Foundation for Continuing Accessibility" Online Information Review (2012) 36:299–306, "Designing and Implementing Information Systems for Records: The Approach Based on Business

Process Analysis” Proceedings of ICEM (International Conference on Engineering and Information Management) (2011):53–56, and “Building Foundations for Digital Records Forensics: A Comparative Study of the Concept of Reproduction in Digital Records Management and Digital Forensics” *American Archivist* (2011) 74:576–599.
