The Lecture Notes in Chemistry

The series Lecture Notes in Chemistry (LNC) reports new developments in chemistry and molecular science—quickly and informally, but with a high quality and the explicit aim to summarize and communicate current knowledge for teaching and training purposes. Books published in this series are conceived as bridging material between advanced graduate textbooks and the forefront of research. They will serve the following purposes:

- provide an accessible introduction to the field to postgraduate students and nonspecialist researchers from related areas,
- provide a source of advanced teaching material for specialized seminars, courses and schools, and
- be readily accessible in print and online.

The series covers all established fields of chemistry such as analytical chemistry, organic chemistry, inorganic chemistry, physical chemistry including electrochemistry, theoretical and computational chemistry, industrial chemistry, and catalysis. It is also a particularly suitable forum for volumes addressing the interfaces of chemistry with other disciplines, such as biology, medicine, physics, engineering, materials science including polymer and nanoscience, or earth and environmental science.

Both authored and edited volumes will be considered for publication. Edited volumes should however consist of a very limited number of contributions only. Proceedings will not be considered for LNC.

The year 2010 marks the relaunch of LNC.

Preface

The cross-coupling reactions, developed for the first time in the 1970s, were acknowledged by the award of the Nobel Prize in Chemistry to three researchers in December, 2010. These cross-coupling reactions have been developed remarkably over the past 40 years vis-à-vis a variety of transition metal catalysts, organometallic reagents, and organic halides. They have enabled the formation of carbon–carbon bonds between unsaturated organic compounds, which is the fundamental framework of organic synthesis. It has become possible to produce extremely complex molecules through the development of the cross-coupling reactions, and as a result, highly selective carbon–carbon-bonding reactions have been achieved.

The large number of publications concerning cross-coupling is continually increasing. The kinds of transition metals used as catalysts, and the organometallic reagents used as coupling partners have also widely expanded in recent years. It has become possible to form a variety of very specific types of carbon–carbon bonds through appropriate selection of the reagents.

Although there are numerous books and reviews on the cross-coupling reactions, until now most of these books have been mainly categorized according to the eponymous (named) reactions. The cross-coupling reactions have had a tremendous impact not only in academic arenas but also in industry. These catalyzed reactions are accomplished using the transition metal complexes with extremely high utility. In this book, from the viewpoint of application, the authors select several representative cross-coupling reactions and classify the types of compounds using the most up-to-date references available. The authors refer to the historical background of the cross-coupling reactions and to the reaction mechanisms. Then the categories of compounds are outlined in order of natural products, pharmaceuticals, liquid crystals, and conjugate polymers. Finally, recent progress is introduced in the form of the new cross-coupling reactions involving aryl chlorides and alkyl halides bearing β -hydrogen as coupling electrophiles.

The authors hope that this book will provide the fundamental basics to both undergraduate and graduate-student readers, but also wish to inspire continued development and innovation of the cross-coupling reactions.

Finally, thanks goes out to Dr. Roderick O'Brien for his helpful input during the preparation of this manuscript and to the editorial team at Springer DE, in particular, Elizabeth Hawkins and Beate Siek for their patience and guidance during the entire projects.

Contents

Part I Metal-Catalyzed Cross-Coupling Reactions

1 A Historic Overview of the Metal-Catalyzed Cross-Coupling Reactions	3
1.1 General Introduction	3
1.2 The Cross-Coupling Reactions Addressed in this Textbook	5
1.2.1 Kumada–Tamao–Corriu Coupling	5
1.2.2 Murahashi Coupling	6
1.2.3 Sonogashira–Hagihara Coupling	7
1.2.4 Negishi Coupling	7
1.2.5 Migita–Kosugi–Stille Coupling	8
1.2.6 Suzuki–Miyaura Coupling	8
1.2.7 Hiyama Coupling	9
1.3 Perspectives	10
References	11
2 Mechanisms and Fundamental Reactions	17
2.1 Transmetalation in Suzuki–Miyaura Coupling	17
2.1.1 Stoichiometric Reactions of Suzuki–Miyaura Coupling	19
2.1.2 Base-Assisted Transmetalation	20
2.1.3 The Turnover Limiting Step in Suzuki–Miyaura Coupling	22
2.1.4 Pathways for Transmetalation	23
2.1.5 Computational Studies of the Transmetalation Step in Suzuki–Miyaura Coupling	25
2.1.6 An Interconversion Between Trifluoroborate and Boronic Acid	28

2.2	The “Copper Effect” in Migita–Kosugi–Stille Coupling.	30
2.2.1	A Cine Substitution Reaction	30
2.2.2	The Copper Effect.	32
2.2.3	Perspectives	34
2.3	Summary	35
	References	35

Part II Applications of the Cross-Coupling Reactions

3	Natural Product Synthesis	43
3.1	Introduction	43
3.2	Kumada–Tamao–Corriu Coupling (sp^3 – sp^2)	44
3.3	Sonogashira–Hagihara Coupling (sp – sp^2)	46
3.4	Negishi Coupling.	49
3.4.1	sp^2 – sp^2 Negishi Coupling.	49
3.4.2	sp^3 – sp^2 Negishi Coupling.	50
3.4.3	sp – sp^2 Negishi Coupling	52
3.4.4	Carbometalation and Negishi Coupling Sequences	52
3.4.5	Utility of Negishi Coupling toward Carbonyl Compound Synthesis	54
3.5	Migita–Kosugi–Stille Coupling	56
3.5.1	Synthetic Methods of Organotin Compounds	56
3.5.2	sp^2 – sp^2 Migita–Kosugi–Stille Coupling	57
3.5.3	Other Migita–Kosugi–Stille Couplings.	62
3.6	Suzuki–Miyaura Coupling	63
3.6.1	sp^2 – sp^2 Suzuki–Miyaura Coupling	64
3.6.2	sp^3 – sp^2 Suzuki–Miyaura Coupling	69
3.7	Hiyama Coupling (sp^2 – sp^2).	71
3.8	Summary	74
	References	74
4	Pharmaceuticals.	85
4.1	Introduction	85
4.2	Suzuki–Miyaura Coupling	86
4.3	Negishi Coupling.	94
4.4	Migita–Kosugi–Stille Coupling.	99
4.5	Kumada–Tamao–Corriu Coupling.	101
4.6	Sonogashira–Hagihara Coupling	103
4.7	Summary	105
