Aging is Unquestioningly Complex

(Thomas B. L. Kirkwood¹)

¹ Kirkwood TB (2011) Systems biology of ageing and longevity. *Philos Trans R Soc Lond B Biol Sci* 366(1561):64–70

Acknowledgments

First of all, the authors wish to thank Michael Plenikowski for his excellent artwork.

Furthermore, gratitude is given to Christof Hiebel, Andreas Kern, and Bernd Moosmann for supplying data from their own work that are included and for many stimulating discussions on the topic.

The scientific work of the authors on aging which is cited and integrated in this book is supported by the Fritz und Hildegard Berg-Stiftung and the Peter Beate Heller-Stiftung, members of the Stifterverband für die Deutsche Wissenschaft.

Contents

1	Aging and Cell Aging: An Introduction	1
1.1	Organ Systems Affected by Aging.	4
1.2	Age-Associated Functional Alterations.	5
	References	7
2	Cell Cycle: The Life Cycle of a Cell	9
2.1	Phases of the Cell Cycle	10
2.2	About Cyclins and Cyclin-Dependent Kinases: Proteins that Trigger Cell Cycle Phases	13
2.3	Better Save than Sorry: The Complex Control of the Cell Cycle.	15
2.4	Last Exit Apoptosis	17
	References	19
3	Theories and Mechanisms of Aging	21
3.1	The Telomere Theory of Aging.	22
3.2	The DNA Damage Theory of Aging	29
3.3	The Sirtuins: The Ultimate Hope or Fallen Star?.	38
3.4	The Impact of Caloric Restriction on Life Span	42
3.5	Genes that Extend Life in Animal Models	45
3.6	Free Radical Theory of Aging.	53
3.7	Protein Quality Control and Aging	65
3.8	Epigenetics	74
3.9	A Holistic View: The Molecular Aging Matrix.	83
	References	87
4	Selected Age-Related Disorders	99
4.1	Age: The Key Risk Factor for Alzheimers Disease	100
4.2	The Common Biology of Aging and Cancer: Senescence as Cancer Protection	104
	References	106
