## Preface

The former Working Party, and currently Division, of Analytical Chemistry of the Federation of European Chemical Societies made the decision in 1996 to produce this book, which lists a large number of European analytical chemists together with their addresses and fields of interest. The principal aims of this book are to promote mutual knowledge and co-operation among them and to allow young chemists and private enterprises to choose a specific research group according to their analytical research lines and specialities.

Through our national delegates, we distributed a comprehensive questionnaire with no restrictions all over Europe. The response varied markedly among countries. We summarized the information received from each analytical chemist, which was confirmed on an individual basis. This was a time-consuming process, so we are aware that not every single European analytical chemist is listed and that some facts may by now be outdated. However, we believe that this first edition will be of invaluable help in order to promote Analytical Chemistry in Europe and remain one of the most salient outputs of the Division of Analytical Chemistry.

Finally, we should like to acknowledge the assistance received from Springer-Verlag (particularly from Mr Peter Enders) and the invaluable technical support of Mr J.M. Membrives.
