Preface

This text is the revised version of my doctoral dissertation which has been accepted by the Department of Economics, University of Heidelberg in June 1999. It is my great pleasure to thank, above all, Malte Faber for encouraging support of this project. His stimulating ideas acted as a rich source of inspiration for me. Till Requate has made extensive comments on earlier drafts. They have considerably improved the final version.

Parts of this work are based on research that I have undertaken together with Malte Faber, Frank Jöst, John L.R. Proops and Johannes Schiller. Working together with them was a great opportunity, from which I took a lot of benefit. Thanks to all of them for being patient with me.

The different ideas, concepts and models as well as their presentation within this work have greatly gained from comments, critical discussions and constructive suggestions from many people. Among those whose comments have left a noticeable impact on this work are Shmuel Amir, Harald Dyckhoff, Manuel Frondel, Stephan Hartmann, Jörg Hüfner, Bernd Klauer, Reiner Kümmel, Heinz D. Kurz, Andreas Lange, Markus Lehmann, Reiner Manstetten, Katalin Martinás, Georg Müller-Fürstenberger, Jürg Niehans, Hans G. Nutzinger, Charles Perrings, Dan Phaneuf, Armin Schmutzler, Wolfram Unold, Wolfgang Weidlich and Ulrich Witt. Their contribution is gratefully acknowledged.

Finally, I am very much indebted to Mark Wenig, Mark Ewald and Martin Quaas for their assistance with countless problems of computer hardware and software.

Heidelberg, December 1999

Stefan Baumgärtner

Brief contents

	1	Introduction	1
Part I		The Phenomenon of Joint Production	
	2	Joint production and the natural environment	23
	3	Thermodynamics	45
	4	All production is joint production	65
Part II		The Analysis of Joint Production in the History of Economic Thought	
	5	The classical position and its early critics	94
	6	The abandonment of classical theory	102
	7	Neoclassical theory from partial to general equilibrium analysis	114
	8	The role of joint production for the construction of economic theory	143
Part III		The Economics of Ambivalent Joint Production	
	9	The concept of joint production	157
	10	Ambivalence of joint products	185
	11	Joint products and irreversibility	231
	12	Non-convexity of the production set	255
	13	Ambivalent joint production: Putting the issues in perspective	290

Contents

Preface	v
1 Introduction	1
1.1 The issue under study	1
1.1.1 Joint production	1
1.1.2 Joint products and the natural environment	2
1.1.3 Ambivalence of joint products	2
1.1.4 Dynamic economy-environment interactions	3
1.1.5 The state of knowledge and ignorance	5
1.2 Scope and method of analysis	6
1.2.1 Defining the basic terms	6
1.2.2 Scope of analysis	8
1.2.3 Aim of this work	8
1.2.4 Environmental Economics and Ecological Economics	9
1.2.5 An interdisciplinary approach	10
1.2.6 Analytical features	11
1.3 Preview of the argument	16
 I The Phenomenon of Joint Production	 21
2 Joint production and the natural environment	23
2.1 The macro-dimension of joint production	23
2.2 The cogeneration of electricity and heat: Ambivalence of joint products	24
2.3 The impact of joint products over time	30
2.3.1 Flow pollution vs. stock pollution	30
2.3.2 The emission of carbon dioxide, methane and nitrous oxide: The anthropogenic greenhouse effect	32
2.3.3 The emission of sulfur dioxide: Acid rain	35
2.3.4 The impact of joint products over time: Conclusion	40
2.4 Sulfuric acid: Joint products as the origin of structural change	40
2.5 Conclusion	43
 3 Thermodynamics	 45
3.1 Phenomenological thermodynamics	46
3.1.1 Thermodynamic systems	46
3.1.2 Conservation of energy	49
3.1.3 Conservation of matter	51

3.1.4	Degradation of energy	51
3.2	Statistical mechanics	54
3.2.1	Boltzmann's notion of entropy	54
3.2.2	Phenomenological versus statistical view	56
3.3	Time-irreversibility	59
3.3.1	Reversible time	59
3.3.2	Time-irreversibility in isolated systems: heat death . .	59
3.3.3	Time-irreversibility in open systems: complexity through self-organization	60
3.3.4	Thermodynamics and time-irreversibility	63
3.4	Conclusion	64
4	All production is joint production	65
4.1	The fundamental factors of production	67
4.2	The thermodynamic view of production	69
4.2.1	Production as a transformation of energy and matter .	69
4.2.2	First and Second Law constraints	71
4.2.3	A 'toy model' of industrial production processes . . .	73
4.2.4	Joint production as a consequence of the First Law . .	77
4.2.5	Joint production as a consequence of the Second Law	78
4.2.6	Some comments on the generality of the employed toy model	80
4.3	Implications and applications of the model	81
4.3.1	Relationship among the joint outputs	82
4.3.2	Relationship among the inputs	83
4.3.3	Substitutability vs. complementarity of inputs	84
4.3.4	Relationship between inputs and outputs and thermo- dynamic limits to technical progress	85
4.4	Conclusion	86
II	The Analysis of Joint Production in the History of Economic Thought	89
5	The classical position and its early critics	94
5.1	Adam Smith: The case of joint production requires special patterns of explanation	94
5.2	John Stuart Mill: Demand and supply	98
5.3	Conclusion	100
6	The abandonment of classical theory	102
6.1	Johann Heinrich von Thünen: Ambivalent joint production .	102
6.2	Karl Marx: Joint products as waste	104
6.3	William Stanley Jevons: Marginal utility explains the demand for joint outputs	107

6.4	Conclusion	112
7	Neoclassical theory from partial to general equilibrium analysis	114
7.1	Alfred Marshall: Substitution in supply	114
7.2	Heinrich von Stackelberg: Analogies to the case of single production	120
7.3	John von Neumann: Duality of process intensities and prices	130
7.4	Arrow/Debreu: The production set	133
7.5	Welfare analysis: Harmful joint outputs	136
7.6	Conclusion	140
	Appendix	141
7A	Von Neumann's model of linear production	141
8	The role of joint production for the construction of economic theory	143
8.1	Summary of chapters 5 to 7	143
8.2	Critical appraisal	146
8.2.1	Empirical relevance	146
8.2.2	Analytical treatment	146
8.3	Interpretation	147
8.3.1	Two different strategies for the construction of economic theory	147
8.3.2	The structuralist research program	150
8.4	Conclusion	153
III	The Economics of Ambivalent Joint Production	155
9	The concept of joint production	157
9.1	The notion of joint production in the literature	158
9.1.1	Joint production in the economic literature	158
9.1.2	Joint production in the business administration literature	162
9.2	A formal definition of joint production	165
9.2.1	Definition	165
9.2.2	Properties of the definition	167
9.3	Subjective elements in the description of production	170
9.3.1	The observer's interest: Is really all production joint production?	171
9.3.2	The valuation by economic agents: Why is the production process carried out?	175

9.3.3	Conceptual separation between the description of production and the valuation of outputs by economic agents	176
9.4	Aspects of joint production	177
9.4.1	Fixed and flexible joint production	177
9.4.2	Ambivalent joint production	181
9.5	Conclusion	184
10	Ambivalence of joint products	185
10.1	A model with joint externalities	187
10.1.1	Specification of the model	187
10.1.2	The transformation curve	191
10.1.3	Optimal allocation and shadow prices	195
10.1.4	Ambivalence of the intermediate product (I)	197
10.2	Solution of the model	200
10.2.1	Scenario 1: No emissions	201
10.2.2	Scenario 2: Final emissions	204
10.2.3	Scenario 3: Joint emissions	208
10.3	Summary of model results	213
10.3.1	Optimal α	213
10.3.2	Ambivalence of the intermediate product (II)	214
10.4	Environmental policy with joint emissions	215
10.4.1	Regulation under complete knowledge	217
10.4.2	Incomplete knowledge and learning by doing	217
10.5	Conclusion	219
10.5.1	What determines the value of joint outputs?	219
10.5.2	The implication for environmental policy	220
10.5.3	The implication for economic modeling	221
	Appendix	221
10A	Determining equation for α	221
10B	Solution for the three scenarios	223
10B.1	Solution in scenario 1	223
10B.2	Solution in scenario 2	225
10B.3	Solution in scenario 3	227
11	Joint products and irreversibility	231
11.1	Notions of irreversibility in production theory	233
11.1.1	Thermodynamic irreversibility	233
11.1.2	Koopmans' notion of irreversibility	233
11.1.3	Debreu's notion of irreversibility	234
11.1.4	Dated goods vs. complete representations	238
11.2	Production and capital accumulation	240
11.2.1	Reversible capital theory	241
11.2.2	Joint products and irreversible capital accumulation	248

11.3 Economic and thermodynamic views on irreversibility	252
11.4 Conclusion	254
12 Non-convexity of the production set	255
12.1 Detrimental joint products and negative externalities	257
12.1.1 Competing uses of the environment	257
12.1.2 A simple model of a two-sector-economy	258
12.2 Baumol type externalities	260
12.2.1 The argument of Baumol and Bradford	260
12.2.2 Formal analysis of the transformation curve	263
12.2.3 Generalization to n production processes	269
12.3 Different types of externalities	269
12.3.1 Different types of negative externality	270
12.3.2 Two examples	273
12.3.3 Different types of non-convexity	278
12.3.4 Negative externalities and non-convexities: summary .	280
12.4 The consequences of a non-convex production possibility set .	281
12.4.1 Non-convexity at the level of individual firms and at the level of the economy	281
12.4.2 Existence of a general competitive equilibrium	282
12.4.3 First welfare theorem	283
12.4.4 Second welfare theorem	283
12.4.5 Second order conditions: Welfare maximum or mini- mum?	285
12.5 Conclusion	287
Appendix	288
12A Properties of the inverse production functions	288
13 Ambivalent joint production: Putting the issues in perspective	290
