Acknowledgements

In the last years, during the preparation of this thesis, the presence, support and encouragement of many people have influenced this work and have contributed to its accomplishment. Therefore, at last, I would like to express my deep gratitude to some of them.

First of all, I would like to thank my thesis advisor Prof. Dr. Erwin “the best” Pesch for his exceptional support and commitment during all this time. His knowledge and advice have shaped this thesis in many ways, his kindness and patience made its preparation a most valuable experience.

My special thanks go to Prof. Dr. Hermann Sabel for his immediate approval to act as a second referee to this dissertation.

I would like to thank Ulrich Dorndorf for many productive discussions which improved this work considerably and as many “unproductive” ones when research was only playing a subordinate role. I also want to thank him for carefully reading the numerous drafts of this thesis.

I, furthermore, want to thank Prof. Dr. David Applegate, Prof. Dr. William Cook, Dr. Bernd Jurisch and Dr. Johann Hurink for providing me with the source code of their algorithms and many benchmark problem instances. Many thanks also to the big T_EXcommunity for providing us with their marvellous tools and applications.

I am very indebted to the Friedrich-Ebert Stiftung who has supported me during this work. I especially would like to thank Rose Bischof who supervised my scholarship during all this time.

Finally, but above all, I would like to thank my parents who taught me the important things in life and have always encouraged and supported me. This work is dedicated to them.

Bonn, March 1, 2000

Toan Phan Huy

Contents

1	Introduction	1
2	General Solution Methods	7
2.1	Constraint Satisfaction and Optimization	8
2.2	Constraint Propagation	10
2.2.1	<i>K</i> -Consistency	14
2.2.2	Domain-Consistency	15
2.2.3	Bound-Consistency	17
2.2.4	Consistency Tests	18
2.3	Exhaustive Search	22
2.3.1	Backtracking	23
2.3.2	Branch-and-Bound	25
2.3.3	Keeping the Balance	26
2.4	Local Search	26
2.4.1	Hill Climbing	29
2.4.2	Simulated Annealing	30
2.4.3	Tabu Search	31
2.4.4	Genetic Algorithms	33
3	The Disjunctive Scheduling Problem	35
3.1	The Disjunctive Scheduling Model	36
3.1.1	The Basic Model	36
3.1.2	A Graph Theoretical Approach	37
3.1.3	Subclasses of the DSP	41
3.2	Disjunctive Clique Decompositions	45
3.2.1	Cliques and Clique Decompositions	45
3.2.2	Computing Clique Decompositions	47
4	Constraint Propagation and the DSP	51
4.1	Some Basic Definitions	52
4.2	Conjunctive Consistency Tests	53
4.3	Lower-Level Bound-Consistency	54
4.3.1	2-B-Consistency	55

4.3.2	3-B-Consistency	56
4.4	Input/Output Consistency Tests	62
4.4.1	Sequence Consistency Tests	63
4.4.2	Domain Consistency Tests	64
4.4.3	Dominance Relations	64
4.4.4	Sequence Consistency Tests Revisited	68
4.4.5	Algorithms and Implementation Issues	68
4.5	Input/Output Negation Consistency Tests	79
4.5.1	Sequence Consistency Tests	79
4.5.2	Domain Consistency Tests	80
4.5.3	Dominance Relations	81
4.5.4	Algorithms and Implementation Issues	83
4.6	Input-or-Output Consistency Tests	91
4.6.1	Domain and Sequence Consistency Tests	91
4.6.2	Algorithms and Implementation Issues	92
4.7	Energetic Reasoning	96
4.7.1	Interval Processing Time	99
4.7.2	Energetic Input/Output Consistency Tests	99
4.7.3	Other Energetic Consistency Tests	102
4.8	Shaving	102
4.9	A Comparison of Disjunctive Consistency Tests	103
4.10	Conjunctive vs. Disjunctive Consistency Tests	105
4.11	Bound-Consistency Revisited	106
5	A Branch-and-Bound Algorithm	113
5.1	The Block Branching Scheme	114
5.1.1	Block Decompositions	114
5.1.2	Block Branching Schemes	115
5.1.3	Block Decomposition Schemes	122
5.2	Lower Bound Calculation	124
5.2.1	Subproblem Based Lower Bounds	126
5.2.2	Constraint Propagation Based Lower Bounds	130
5.3	Upper Bound Calculation	131
5.4	Putting Things Together: The Algorithm	133
5.5	Computational Results	136
5.5.1	The JSP	137
5.5.2	The OSP	156
5.5.3	The DSP	165
6	A Decomposition Based Heuristic	172
6.1	Edge-Guessing	173
6.2	A Parallel Strategy	176
6.3	A Sequential Strategy	178
6.4	Computational Results	181
6.4.1	The JSP	181

6.4.2	The DSP	187
7	A Local Search Based Heuristic	211
7.1	Neighbourhood Structures	211
7.2	Makespan Approximations	213
7.3	A Tabu Search Approach	217
7.4	Edge-Guessing and Local Search	220
7.5	Computational Results	220
7.5.1	The JSP	221
7.5.2	The OSP	222
7.5.3	The DSP	222
8	Some Concluding Remarks	234
	List of Symbols	237
	Bibliography	244
