Table of Contents

Foreword	1
Chapter I: Morphological Research and Invention.	6
1. Introductory Remarks.	6
2. Random Intuition and Systematized Discovery, Research and Invention. Communicable Truth and Incommunicable Truth	9
3. The Formalism of Communicable Truth	11
4. The Method of Negation and Subsequent Construction.	17
5. The Morphological Method of Analysis and Construction.	19
6. Past Applications of the Morphological Method	21
7. Deficiencies which Aid the Morphological Method	22
8. The Record of the 18-inch Schmidt Telescope on Palomar Mountain.	27
9. Specific Plans for a Morphological Approach to Astronomy.	29
Chapter II: Clouds and Clusters of Galaxies	30
10. The Known and the Unknown	30
11. The Large Scale Distribution of Matter in the Universe	32
12. The Coma Cluster of Galaxies	37
13. Excursion into the Theory of Probabilities	50
14. Continuation of the Discussion on the Coma Cluster.	53
15. The Cancer Cluster of Galaxies	57
16. The Pegasus Cluster of Galaxies	61
17. Review of the Observations on the Clusters of Galaxies in Coma, Cancer and Pegasus	68
18. Irregular Clusters of Galaxies.	70
19. Isoleths of Nebular Distribution	82
Chapter III: The Large Scale Distribution of Galaxies and of Clusters of Galaxies.	88
20. Past and Present Views	88
21. Cluster Cells	91
22. The Field of the Coma Cluster	92
23. The Field of the Pegasus Cluster	94
24. The Field of the Corona Borealis Cluster.	94
25. Various Statistical Methods in the Field of Dimensionless Morphology. Contagion	99
26. Comparison of the Observed and of the Random Distribution Curves of Galaxies.	100
27. Intergalactic Obscuration	101
28. Counts of Galaxies in Depth and in Width	108
29. Counts of Galaxies in Dependence upon Apparent Magnitude.	110
Chapter IV: Kinematic and Dynamic Characteristics of the Large Scale Aggre- gates of Matter.	114
30. The Velocities of Galaxies	114
31. Some Basic Problems Relating to the Universal Redshift	123
32. Elements of a Theory of the Large Scale Distribution of Matter in the Universe.	125
33. Dimensional Aspects of Large Scale Clustering	126
34. Hydrodynamical Concepts	128
35. Applications of the Virial Theorem to Clusters of Galaxies	129
36. Clusters of Galaxies and the Emden Gravitational Isothermal Gas Sphere	134
37. A Possible Universal Characteristic Central Density of Clusters of Galaxies.	144
38. Relative Physical Characteristics of Galaxies and of Clusters of Galaxies	146

Chapter V: Dimensional and Dimensionless Morphology in Cosmology	149
39. Appraisal of Past Approaches to the Exploration of Extragalactic Space	149
40. Methodology of Cosmological Research	149
a) Dimensionless Morphology	
b) Dimensional Morphology	
41. Distribution of Clusters of Galaxies and their Apparent Populations. Intergalactic Obscuration	156
42. The Frequency of Clusters of Galaxies as a Function of their Angular Diameters. Crucial Tests for the Theory of the Expanding Universe.	166
43. The Total Space Occupied by the Large Clusters of Galaxies	170
44. The Luminosity Function of Cluster Galaxies.	171
45. Preliminary Test of the Theory of a Flat Expanding Universe	176
46. The Morphological Approach Toward the Determination of Absolute Dimensions and of Absolute Physical Characteristics of Very Remote Objects	179
47. Remarks on the Morphology of Possible Cosmological Theories	186
48. The Einstein Redshift	188
49. The Gravitational Drag of Light	190
Chapter VI: Morphological Features of Individual Galaxies.	192
50. References to the History of the Subject.	192
51. Program for the Investigation of Individual Galaxies by the Methods of Dimensionless Morphology	193
52. The Kinematic and Dynamic Characteristics of Galaxies	208
53. The Masses of Galaxies	214
54. Galaxies as Gravitational Lenses	215
55. The Luminosity Function of Galaxies	220
56. Multiple Galaxies and Intergalactic Matter	229
Chapter VII: Morphological Astronomical Kaleidoscope	231
57. General Remarks	231
58. Observations Made and Planned	232
59. Experimentation with Celestial Objects	249
60. Astrophysical Theories.	250
61. Material Reconstruction of Parts of the Universe	259
62. Sociological Problems	262
Chapter VIII: The Morphological Method and a priori Knowledge. The Magic Numbers.	270
63. Philosophy and Communicable Truth	270
64. The Irreducible Foundations of Communicable Truth	272
65. Some Specific Problems	272
66. Outstanding Transcendental Numbers	273
67. The Dimensionalities used in Physics	275
68. Why is Space Three-Dimensional?	279
69. Other Magic Numbers	280
70. The Nature of the Physical Laws	280
Epilogue	282
Bibliography.	290
Name Index	294
Subject Index	296
