

N. Kolev, G. Huemer, M. Zimpfer

Transesophageal Echocardiography

A New Monitoring Technique

Springer-Verlag Wien New York

Nikolai Kolev, MD, FACC

Research Cardiologist Associate in Anesthesia and
Consultant Echocardiographer, Firma Hewlett Packard
Department of Anesthesiology and General Intensive Care,
University of Vienna, Austria

Günter Huemer, MD

Staff Anesthesiologist
Department of Anesthesiology and General Intensive Care,
University of Vienna, Austria

Michael Zimpfer, MD

Professor of Anesthesia
Chairman of the Department of Anesthesiology and
General Intensive Care, University of Vienna, Austria

Typesetting and Data-conversion: Thomson Press, India

Printed on acid-free and chlorine-free bleached paper

With 77 partly coloured Figures

Library of Congress Cataloging-in-Publication Data.

Kolev, N. (Nikolai), 1942– . Transesophageal echocardiography: a new monitoring technique / N. Kolev, G. Huemer, M. Zimpfer. p. cm.

ISBN-13: 978-3-211-82650-8 e-ISBN-13: 978-3-7091-7676-4

DOI: 10.1007/978-3-7091-7676-4

I. Transesophageal echocardiography. I. Huemer G. (Günter). II. Zimpfer, M. (Michael), 1951– . III. Title.

[DNLM: 1. Echocardiography, Transesophageal. WG 141.5.E2 K81t 1994].

RC683.5.T83K65 1994. 616.1'20754—dc20. DNLM/DLC. 94-42060 CIP.

ISBN-13: 978-3-211-82650-8

This book is dedicated to our children

Contents

Chapter 1	
Introduction	1
References	4
Chapter 2	
General theory, history and development	5
Principles of two-dimensional echocardiography	5
Principles of Doppler echocardiography	10
Digital cine loop technology	15
History and development of transesophageal echocardiography	17
Characteristics of transesophageal systems	18
References	21
Chapter 3	
Standard transesophageal imaging and planes	24
General considerations	24
Cardiac examination	24
Transgastric views	24
Midesophageal views	28
Basal esophageal views	30
References	34
Chapter 4	
On-line and off-line determinations of ventricular preloads and volumes	36
Preload – clinical relevance	36
Off-line echocardiographic estimations of preload	38
Prolate ellipse method, area-length approach	40
Simpson’s rule method	41
On-line assessment of preload: acoustic quantification technique	45
References	47
Chapter 5	
Assessment of afterload	50
Clinical relevance	50
Echocardiographic estimation of afterload	54
References	56

Chapter 6

Contractility	58
Contractility indices revisited	58
Cardiac output	59
Two-dimensional method	61
Doppler echocardiographic method	62
Theory	62
Cardiac output by sampling the aortic valve	63
Cardiac output by sampling the pulmonic valve	64
Fundamental sources of error	65
Comparison with other methods of cardiac measurement	67
Uses of Doppler cardiac output in anesthesiology	67
Ejection fraction	67
Mean velocity of circumferential fiber shortening (Vcf)	71
Two-dimensional Doppler echocardiographic estimation of isovolumic phase indexes	72
Peak rate of change of left ventricular pressure (dP/dt)	72
Isovolumic contraction time (IVCT)	74
Frank-Starling principle and end-systolic performance curves	75
References	82

Chapter 7

Perioperative myocardial ischemia	86
Cardiac risk	86
References	89
Myocardial ischemia: pathophysiology and effects of the inhalational anesthetics	91
References	94
Left ventricular segmental wall motion analysis	97
Experimental and clinical studies	97
Standard TEE monitoring position	99
General considerations	104
Reference systems	105
Methods for calculating the central reference (centroid) for an individual frame	108
Systolic wall thickening analysis	110
Biplane and multiplane TEE imaging	113
Cine loop and SWMA	114
Methodological problems	116
References	117
Automated on-line wall motion analysis	121
Introduction	121
Principles of border identification	121
Principles of the internal „centroid“ reference systems	122
Wall motion versus wall thickening	124
Conclusion	124
References	125
Myocardial ischemia and Doppler transmitral diastolic flow	126
Recording techniques and parameters of Doppler transmitral inflow	127
Practical remarks on measurement of Doppler transmitral parameters	131

Relation between mitral flow characteristic and hemodynamics	132
Doppler transmitral flow for intraoperative diagnosis of acute myocardial ischemia	133
References	136
Myocardial perfusion by contrast echocardiography: new trend in ischemia detection (scenario of the year 2000)	138
Principles of contrast echocardiography	138
Quantitative analysis of myocardial contrast two-dimensional echocardiography	140
a) Assessment of the perfusion territory of regional myocardial perfusion mapping	141
b) Qualification of regional myocardial blood flow	145
Conclusion	147
References	147
Subject index	151
