# Contents

<b>1</b>	<b>Introduction to Water Circulation in Rocks</b>	<b>1</b>
1.1	General Observations	1
1.2	Origin of Discontinuities	2
1.3	Features of Discontinuities	3
1.3.1	Orientation	4
1.3.2	Degree of Fracturing	6
1.3.3	Persistence	8
1.3.4	Aperture and Filling	9
1.3.5	Roughness	10
1.3.6	Weathering	12
1.3.7	Moisture Conditions and Seepage	12
1.4	Graphical Representation of Discontinuities	13
1.4.1	Equal Areal Projections	14
1.4.2	Equal Angle Projections	16
1.5	Basic Elements for Hydrogeological Conceptual Model Definition	19
1.5.1	The Work Scale	21
1.5.2	Elementary Representative Volume	22
1.5.3	Changing of Fracturing Degree with Depth	23
1.6	Probabilistic Generation of Discontinuity Network	24
<b>2</b>	<b>Hydraulic Conductivity Assessment</b>	<b>29</b>
2.1	Introduction	29
2.2	Deterministic Methodologies	29
2.2.1	Hydraulic Conductivity Along a Single Fracture	29
2.2.2	Hydraulic Conductivity Along a Fracture System	32
2.2.3	Hydraulic Conductivity Tensor	33
2.2.4	Equivalent Hydraulic Conductivity	35
2.3	Probabilistic Methodologies: Percolation Theory	36
2.4	In Situ Tests	41
2.4.1	Lugeon Tests	41
2.4.2	Hydrogeochemical Methods	42
2.4.3	Hydraulic Tests in Double-Porosity Aquifers	44
2.4.4	Hydraulic Tests in Anisotropic Aquifers	46

<b>3</b>	<b>Influence of Joint Features on Rock Mass Hydraulic Conductivity</b>	49
3.1	Introduction	49
3.2	Influence of Joint Roughness	49
3.2.1	Effects of Roughness on Hydraulic Conductivity of a Single Joint: Theoretical Analysis	50
3.2.2	Effects of Roughness on Hydraulic Conductivity of a Single Joint: Experimental Checking	53
3.2.3	Effects of Roughness on Rock Mass Hydraulic Conductivity	56
3.3	Influence of Joint Aperture	58
3.3.1	Changes in Aperture with Depth	59
3.3.2	Changes in Aperture with the Stress Field	63
3.4	Influence of Joint Spacing and Frequency	67
3.5	Joints Interconnection	69
<b>4</b>	<b>Main Flow Direction in Rock Masses</b>	73
4.1	Introduction	73
4.2	Anisotropy of the Fractured Medium	73
4.3	Main Flow Direction in Fractured Media	76
4.4	Non-saturated Medium	77
4.5	Non-saturated Medium: Main Flow Direction with an Impermeable Layer	81
4.6	Saturated Medium	82
4.6.1	Known Hydraulic Gradient	83
4.6.2	Unknown Hydraulic Gradient	84
<b>5</b>	<b>Methods and Models to Simulate the Groundwater Flow in Rock Masses</b>	87
5.1	Introduction	87
5.2	Basic Elements of a Modeling Approach	87
5.2.1	Definition of the Conceptual Model	89
5.2.2	The Model Project	90
5.2.3	Choice of the Numerical Code	90
5.3	Darcy's Model	91
5.4	Discrete Models	93
5.5	Dual Porosity Models	97
<b>6</b>	<b>Case Histories</b>	101
6.1	Groundwater Flow and Slope Stability	101
6.2	Evaluation of the Hydrogeological Risk Linked with Tunneling	108
6.2.1	Reconstruction of the Groundwater Flow	110
6.2.2	Estimation of the Tunnel Inflow	111
6.2.3	Delimitation of the Tunnel Influence Zone	116
6.2.4	Hydrogeological Risk Analysis	123
6.3	Hydrogeological Risk Linked with Road Construction	127

- 6.4 Mountain Aquifer Exploitation and Safeguard: Eva Verda Basin Case Study (Saint Marcel, Aosta Valley, Italy) . . . . . 135
  - 6.4.1 Hydrogeological Reconstruction . . . . . 138
- 6.5 Stochastic Groundwater Modeling for the Drying Risk Assessment 144
  - 6.5.1 Hydrogeological Setting of the Study Area . . . . . 145
  - 6.5.2 Groundwater Model of the Nossana Spring . . . . . 147
  - 6.5.3 Factors Involved in the Depletion Curve . . . . . 151
  - 6.5.4 Drying Risk Assessment . . . . . 153
- References** . . . . . 155
- Index** . . . . . 163
