

# Rural Aging in 21st Century America

# Understanding Population Trends and Processes

## Volume 7

### Series Editor

J. Stillwell

In western Europe and other developed parts of the world, there are some very significant demographic processes taking place at the individual, household, community and national scales including the ageing of the population, the delay in childbearing, the rise in childlessness, the increase in divorce, the fall in marriage rates, the increase in cohabitation, the increase in mixed marriages, the change in household structures, the rise in step-parenting and the appearance of new streams of migration taking place both within and between countries. The relationships between demographic change, international migration, labour and housing market dynamics, care provision and intergenerational attitudes are complex to understand and yet it is vital to quantify the trends and to understand the processes. Similarly, it is critical to appreciate what the policy consequences are for the trends and processes that have become apparent. This series has its roots in understanding and analysing these trends and processes.

This series will be of interest to a wide range of individuals concerned with demographic and social change, including demographers, population geographers, sociologists, economists, political scientists, epidemiologists and health researchers as well as practitioners and commentators across the social sciences.

*This book is dedicated to the older people in rural communities who are living the lives that we study and write about.*

# Acknowledgements

We thank officials at the US Department of Agriculture for support of W2001, a multi-state research committee on “Population Dynamics and Change: Aging, Ethnicity and Land Use Change in Rural Communities” and for support of the successor W3001 multi-state research committee on “The Great Recession, Its Aftermath, and Patterns of Rural and Small Town Demographic Change.” Our membership on the committee provided much of the impetus for editing a book on rural aging in the United States. We thank the active support of each of the authors who contributed chapters to this volume, many of whom are members of the multi-state research committee. We also gratefully acknowledge funding support for our work on the project from the Cornell Agricultural Experiment Station, Projects NYC-15980 and NYC-159800 and the Utah Agricultural Experiment Station, Projects UT 0835 and UT 1124. Evelien Bakker and Bernadette Deelen-Mans, our editors at Springer, were extraordinarily patient with delays that included not only family emergencies, our own aging, but also tornados. Most importantly, we thank Edmund Oh, Ph.D. candidate in Development Sociology at Cornell University, for his technical assistance. He taught us more about dpi’s, tiffs, formatting and checking references than we thought possible; without him, this book would not have been possible. Finally, but not least, thank you to our families for their encouragement to undertake and complete this book project.
