Series Editor's Note

The interface between Clinical Immunology and other branches of medical practice is frequently blurred and the general physician is frequently faced with clinical problems with an immunological basis and is often expected to diagnose and manage such patients. The rapid expansion of basic and clinical immunology over the past two decades has resulted in the appearance of increasing numbers of immunology journals and it is impossible for a non-specialist to keep apace with this information overload. The Immunology and Medicine series is designed to present individual topics of immunology in a condensed package of information which can be readily assimilated by the busy clinician or pathologist.
