A SHORT COURSE ON FUNCTIONAL EQUATIONS

THEORY AND DECISION LIBRARY

General Editors: W. Leinfellner and G. Eberlein

Series A: Philosophy and Methodology of the Social Sciences

Editors: W. Leinfellner (University of Nebraska)

G. Eberlein (University of Technology, Munich)

Series B: Mathematical and Statistical Methods

Editor: H. Skala (University of Paderborn)

Series C: Game Theory and Decision Making

Editor: S. Tijs (University of Nijmegen)

Series D: System Theory, Knowledge Engineering and Problem Solving

Editor: W. Janko (University of Vienna)

SERIES B: MATHEMATICAL AND STATISTICAL METHODS

Editor: H. Skala (Paderborn)

Editorial Board

J. Aczel (Waterloo), G. Bamberg (Augsburg), W. Eichhorn (Karlsruhe),
P. Fishburn (New Jersey), D. Fraser (Toronto), B. Fuchssteiner (Paderborn),
W. Janko (Vienna), P. de Jong (Vancouver), M. Machina (San Diego),
A. Rapoport (Toronto), M. Richter (Aachen), D. Sprott (Waterloo),
P. Suppes (Stanford), H. Theil (Florida), E. Trillas (Madrid), L. Zadeh (Berkeley).

Scope

The series focuses on the application of methods and ideas of logic, mathematics and statistics to the social sciences. In particular, formal treatment of social phenomena, the analysis of decision making, information theory and problems of inference will be central themes of this part of the library. Besides theoretical results, empirical investigations and the testing of theoretical models of real world problems will be subjects of interest. In addition to emphasizing interdisciplinary communication, the series will seek to support the rapid dissemination of recent results.

TABLE OF CONTENTS

Introduction	1
Section 1. An aggregation theorem for allocation problems. Cauchy equation for single- and multiplace functions. Two extension theorems.	2
Section 2. Scale-invariant equal sacrifice in taxation. The linear-affine functional equation. Multiplicative and logarithmic functions.	22
Section 3. General forms of 'laws of sciences' without dimensional constants. The case of the same ratio scale for all variables. Generalized homogeneous functions. Inequality measures.	35
Section 4. General forms of 'laws of science' with (partially) independent ratio and interval scales. Multiplace multiplicative and logarithmic functions. Price levels. Endomorphisms of a real field. The exponential equation. Characters.	52
Section 5. Pexider's equation and its extension. Quasi-extension of Cauchy's equation. Determination of all generalized Hicks-neutral production functions.	71
Section 6. Determination of all Hicks-neutral production functions depending upon capital, labor and time (state of technology). The translation equation.	92

Section 7.	106
The associativity equation. Synthesis of ratio judgements. The quasiarithmetic means. The Jensen equations. A conditional linear-affine equation. A characterization of root-mean-powers and of the geometric mean.	
Section 8.	133
Synthesis of measure judgements. Equations in a single variable. The Abel and Schröder equations. Iteration.
