CONTENTS

I INTRODUCTION / 1

II HISTORY / 5

III ANATOMY / 9

IV PHYSIOLOGY / 12

Introduction / 12

1. Innervation of the small intestine / 12
2. Tone and peristalsis / 13
3. Function of the pyloric muscle / 14
4. Influence of nutrients on gastric emptying time and rate of transit through the small intestine / 15
5. Influence of the volume of the contrast meal on the gastric emptying time / 16
6. Effect of the absorption of fluids from the contrast column in the distal ileum / 17
7. Obstructions in the small intestine / 17

V THE CONTRAST MEDIUM / 18

General considerations / 18

1. Sedimentation of the contrast medium / 18
2. Flocculation of the contrast fluid / 20
3. Segmentation of the contrast column / 24
4. Additives to the contrast medium for the purpose of improving stability and adhesion / 27
5. Relationship between viscosity, particle size and adhesion of the barium suspension / 29
6. Specific gravity of the contrast fluid / 31
7. Comparative studies with different brands / 40
8. Contrast media other than barium sulfate / 41

Barium carbonate / 41

Disadvantages of barium suspensions / 41

Suspensions of an organic iodine compound / 41

Aqueous iodine solutions / 42

Gastrografine-barium mixtures / 43

VI METHODS OF EXAMINATION / 44

1. 'Physiological' examination of the small intestine / 44
2. Single administration of the contrast medium / 45
 - Normal amount / 45
 - Small amounts / 45
 - Large amounts / 45
3. Fractional administration of the contrast medium / 46
 - Method of Pansdorf / 46
 - Modification of Weltz / 46
 - Modification of Naumann / 47
 - Fractionation by the pyloric muscle / 47
4. Administration of cold fluids with the contrast medium / 48
 - Method of Weintraub and Williams / 48
 - Simplified variations / 48
5. Administration of the contrast medium through a tube directly into the small intestine (enteroclysis) / 49
6. Retrograde administration of the contrast fluid / 51
7. Combined methods of examination / 51
8. Laxation before the examination and the use of the right lateral position / 52
9. Use of drugs to accelerate transit / 52
 - Prostigmin / 53
 - Sorbitol / 53
 - Metoclopramide (Primperan) / 54
 - Laxatives / 55

VII REVIEW AND CONCLUSION / 56**VIII THE ENTERAL CONTRAST INFUSION / 61**

1. Preparation of patients / 61
2. Duodenal intubation / 61
3. Administration of the contrast medium / 63
4. Radiological examination / 67
5. Supplementary administration of air or water / 68

IX DISCUSSION OF PATIENTS / 86

1. General considerations / 86
2. Patients / 88

X SUMMARY AND CONCLUSION / 139**BIBLIOGRAPHY / 141**

This study was performed in the Department of Radiology (Head: Prof. Dr. J. R. von Ronnen) of the Leiden University Hospital, The Netherlands.

Patients: Department of Gastroenterology (Head: Dr. A. J. Ch. Haex), and Department of Surgery (Head: Prof. Dr. M. Vink), Leiden University Hospital.

Drawings prepared by Mrs. J. J. M. de Vries-Jagersma and the author.

Photographs by M. G. Popkes and C. Th. Ruygrok, Department of Radiology, Leiden University Hospital.

Translation by Mrs. G. P. Bieger-Smith, Leiden.
