Contents

Introduction	1
Chapter I. Classical Algebraic K-functors	3
§ 1. The Grothendieck functor K_0	3
A. Definition, examples and some properties	3
B. $\text{Spec}(R)$ and $H(R)$	12
C. Serre's theorem	18
§ 2. The Bass-Whitehead functor K_1^B	29
§ 3. The Milnor functor K_2^M	35
Chapter II. Higher K-functors	43
§ 1. K -theory of Quillen for exact categories	43
§ 2. The Quillen plus construction	72
A. Definition and properties	72
B. Computation of $K_*^Q(k)$ for a finite field k	93
C. Quillen's K -groups for free algebras	96
D. Negative algebraic K -theory	102
E. Finite generation of Quillen's K -groups of the rings of algebraic integers	108
F. Transfer map in the localization theorem	117
§ 3. K -Theory of Swan	127
§ 4. K -theory of Karoubi-Villamayor	140
§ 5. K -theory of Waldhausen	149
Chapter III. Properties of algebraic K-functors	163

§ 1. Exactness, excision and the Mayer-Vietoris sequence	163
A. Exactness	163
B. Excision	170
C. The Mayer-Vietoris sequence	181
§ 2. The localization theorem	184
§ 3. The fundamental theorem	197
§ 4. Products in algebraic K -theory	222
§ 5. Stability	248
Chapter IV. Relations between algebraic K -theories	253
§ 1. Isomorphism of Quillen's algebraic K -theories. Agreement of plus construction and Q -construction	253
§ 2. Connection of Quillen's plus construction with Swan's algebraic K -theory	270
§ 3. Comparison of Swan's and Karoubi-Villamayor's algebraic K -theories	278
Chapter V. Relation between algebraic and topological K -theories	289
§ 1. Equivalence of categories of finitely generated projective modules and vector bundles over a compact space for C^* -algebras	289
§ 2. K -theory of special normed algebras and $\mathbb{Z}_2$ -graded C^* -algebras	305
A. K -theory of special normed algebras	305
B. K -theory of $\mathbb{Z}_2$ -graded C^* -algebras	328
§ 3. Isomorphism of Swan's and Karoubi-Villamayor's K -theories with topological K -theory for real Banach algebras	353
Chapter VI. The problem of Serre for polynomial and monoid algebras	361
§ 1. Proof of Anderson's conjecture	361
A. Normal and seminormal monoids	361
B. Projective modules over normal monoid rings	368
C. On the triviality of the Picard group for monoid algebras over a principal ideal domain	380
§ 2. The algebraic proof of Swan	387
Chapter VII. Connection with cyclic homology	423
References	429
Index	433
