ARTIFICIAL NEURAL NETWORKS IN HYDROLOGY

Water Science and Technology Library

VOLUME 36

Editor-in-Chief

V. P. Singh, *Louisiana State University, Baton Rouge, U.S.A.*

Editorial Advisory Board

M. Anderson, *Bristol, U.K.*

L. Bengtsson, *Lund, Sweden*

J. F. Cruise, *Huntsville, U.S.A.*

U. C. Kothiyari, *Roorkee, India*

B. M. Sahni, *Aurangabad, India*

S.E. Serrano, *Lexington, U.S.A.*

D. Stephenson, *Johannesburg, South Africa*

The titles published in this series are listed at the end of this volume.

ARTIFICIAL NEURAL NETWORKS IN HYDROLOGY

edited by

R.S. GOVINDARAJU

*Purdue University,
West Lafayette, Indiana, U.S.A.*

and

A. RAMACHANDRA RAO

*Purdue University,

ARTIFICIAL NEURAL NETWORKS IN HYDROLOGY

ACKNOWLEDGEMENTS	xi
LIST OF CONTRIBUTORS	xiii
INTRODUCTION	1
<i>R.S. Govindaraju and A. Ramachandra Rao</i>	
Background and Motivation	
Scope of this Book	
1. EFFECTIVE AND EFFICIENT MODELING FOR STREAMFLOW FORECASTING	7
<i>H.V. Gupta, K. Hsu and S. Sorooshian</i>	
1.1 Introduction	
1.2 Multi-layer Feedforward Neural Networks	
1.2.1 Network structure	
1.2.2 Network training	
1.2.3 Gradient-based training methods	
1.2.4 Global search algorithms	
1.2.5 Linear least square simplex (LLSSIM)	
1.3 Streamflow Forecasting Using TFNNs	
1.4 Discussion	
1.5 Appendix	
2. STREAMFLOW FORECASTING BASED ON ARTIFICIAL NEURAL NETWORKS	23
<i>J.D. Salas, M. Markus and A.S. Tokar</i>	
2.1 Introduction	
2.2 Forecasting Based on Artificial Neural Networks	
2.2.1 Basic concepts	
2.2.2 Artificial neural network approximation models	
2.2.3 Training based on back-propagation method	
2.2.4 Validation (testing)	
2.2.5 Forecast uncertainty	
2.2.6 An example of streamflow forecasting based on ANNs	
2.3 Daily Streamflow Forecasting for Little Patuxent River	
2.3.1 ANN forecasting model	
2.3.2 Results and discussion	
2.4 Monthly Streamflow Forecasting Based on Artificial Neural Networks	
3. REAL TIME FORECASTING USING NEURAL NETWORKS	53
<i>M.C. Deo and K. Thirumalaiah</i>	
3.1 Introduction	
3.2 The Network and Its Training	
3.2.1 Back-propagation algorithm	
3.2.2 Conjugate gradient algorithm	
3.2.3 Cascade correlation algorithm	
3.3 Forecasting of Flood Runoff	
3.3.1 Use of flow time history	
3.3.2 Use of rain gauge data	
3.4 Forecasting of Water Levels	
3.4.1 Forecasting at site Jagdalpur	
3.4.2 Forecasting at site Kunta	
3.4.3 Forecasting at site Koida	

3.5	Catchment-Scale Forecasting	
3.5.1	Software development	
3.5.2	Data	
3.5.3	Gauge network	
3.5.4	NN training	
3.5.5	MR and AR models	
3.5.6	Forecast	
4.	MODULAR NEURAL NETWORKS FOR WATERSHED RUNOFF	73
	<i>B. Zhang and R.S. Govindaraju</i>	
4.1	Introduction	
4.2	Modular Neural Networks	
4.2.1	Motivation for the use of modular neural networks	
4.2.2	Architecture of modular neural networks	
4.2.3	Mathematical model for the modular network	
4.2.4	Determination of posterior probabilities	
4.2.5	Training the expert networks	
4.2.6	Training the gating network	
4.2.7	Updating the variances during training	
4.3	Description of Study Watersheds	
4.4	Identification of Input Parameters	
4.5	Results and Discussion	
4.6	Conclusion	
5.	RADIAL-BASIS FUNCTION NETWORKS	93
	<i>R. S. Govindaraju and B. Zhang</i>	
5.1	Introduction	
5.2	Radial-Basis Functions for Exact Interpolation	
5.3	Generalized Radial-Basis Function Networks	
5.4	Training Strategies	
5.4.1	Random selection of centers	
5.4.2	Supervised selection of centers	
5.4.3	Orthogonal least squares	
5.4.4	Clustering algorithms	
5.4.5	Self-organizing feature maps	
5.5	Applications	
5.6	Geostatistics and RBF Networks	
5.6.1	Similarities and differences	
5.6.2	Interpolation of hydraulic conductivity	
5.7	Limitations of RBF Networks	
5.8	Conclusions	
6.	ARTIFICIAL NEURAL NETWORKS IN SUBSURFACE CHARACTERIZATION	111
	<i>D. M. Rizzo and D. E. Dougherty</i>	
6.1	Introduction	
6.2	Data Management	
6.3	Relationship between ANNs and Classical Spatial Statistics	
6.4	Traditional Approach to Statistical Pattern Completion	
6.4.1	Bayesian classifiers	
6.4.2	Fisher's linear discriminant analysis	
6.4.3	K-nearest neighbor and K-means classifiers	
6.4.4	Regression and kriging	
6.5	Relationship of Counterpropagation to Classical Statistics	
6.5.1	Kohonen's weights and nearest neighbor classifiers	
6.5.2	Grossberg weights and the Bayes classifier	

6.6	Application Using Counterpropagation Characterization of Aquifer Properties Using 'Hard' and 'Soft' Data	
6.6.1	Sequential training to incorporate mixed data	
6.7	Relating Backpropagation to Classical Statistics	
6.8	Applications Using Backpropagation: Regionalized Cokriging	
6.8.1	Training Phase	
6.8.2	Interpolation phase	
6.9	Summary	
7.	OPTIMAL GROUNDWATER REMEDIATION USING ARTIFICIAL NEURAL NETWORKS	135
	<i>L.L. Rogers, V. M. Johnson and F.U. Dowla</i>	
7.1	Background in Simulation-management Modeling and Motivation for Using Artificial Neural Networks (ANNs)	
7.2	Methodology	
7.2.1	Creation of the knowledge base	
7.2.2	Training and testing of ANNs	
7.2.3	Search for optimal well combinations	
7.2.4	Verify optimal combinations with the simulator	
7.3	Application to Field-scale Site	
7.3.1	Site description and groundwater model	
7.3.2	Management questions and results	
7.3.3	Location analysis	
8.	ADAPTIVE NEURAL NETWORKS IN REGULATION OF RIVER FLOWS	153
	<i>J.M. Reddy and B. M. Wilamowski</i>	
8.1	Problem Statement	
8.2	ANN Approach	
8.2.1	Drawbacks of earlier methods	
8.2.2	Potential of ANNs	
8.2.3	Real-time data acquisition systems	
8.2.4	On-line system identification and adaptive regulation of river flows	
8.3	Application of ANN to River Flow Regulation	
8.3.1	Application of ANN to water resources problems	
8.3.2	Application to North Platte river in Wyoming	
8.3.3	Application to Arkansas river in Colorado	
8.4	Conclusions	
9.	IDENTIFICATION OF POLLUTION SOURCES VIA NEURAL NETWORKS	179
	<i>G.M. Brion and S. Lingireddy</i>	
9.1	Introduction	
9.2	Suitability of Neural Networks for Watershed management	
9.3	Sources of Encysted Protozoa	
9.4	Protozoan Indicators	
9.5	Watershed Management Tools	
9.5.1	Neural Network Models	
9.5.2	Relative merits of neural network models	
9.6	Case Study-Source Identification Model	
9.6.1	Site description	
9.6.2	Data collection	
9.6.3	Neural network architecture	
9.6.4	Training schemes	
9.6.5	Model predictions	
9.6.6	Model sensitivity	
9.6.7	Portability to other watersheds	
9.7	Future Trends	

10. SPATIAL ORGANIZATION AND CHARACTERIZATION OF SOIL PHYSICAL PROPERTIES USING SELF-ORGANIZING MAPS	199
<i>S. Islam and R. Kothari</i>	
10.1 Introduction	
10.2 Self Organizing Maps (SOM): A Brief Overview	
10.3 Spatial Characterization of Soil Moisture Using SOM	
10.4 Identification of Soil Texture Using SOM	
10.5 Discussion	
11. RAINFALL ESTIMATION FROM SATELLITE IMAGERY	209
<i>K.-L. Hsu, H.V. Gupta, X. Gao and S. Sorooshian</i>	
11.1 Introduction	
11.2 Satellite-Based Rainfall Estimates	
11.3 Artificial Neural Network Models	
11.3.1 Modified counter propagation model (MCPN)	
11.3.2 Network training	
11.4 Data Preprocessing	
11.5 Rainfall Estimation over the Land Surface	
11.5.1 Rainfall estimation from GOES imagery	
11.5.2 Data used, model architecture, and training algorithm parameters	
11.5.3 Results	
11.6 Rainfall Estimation over Oceans Using Multi-Satellite Imagery	
11.6.1 Enhanced GOES-infrared based rainfall estimates over oceans	
11.6.2 Data used and model architecture	
11.6.3 Results	
11.7 Conclusion	
12. STREAMFLOW DATA INFILLING TECHNIQUES BASED ON CONCEPTS OF GROUPS AND NEURAL NETWORKS	235
<i>U.S. Panu, M. Khalil and A. Elshorbagy</i>	
12.1 Introduction	
12.1.1 Groups and groupings in hydrologic data	
12.2 Assessment of Current Data Infilling Methods and Techniques	
12.2.1 Single-valued data approach	
12.2.2 Group-valued data approach	
12.2.3 Concluding remarks on the status of existing data infilling techniques	
12.3 Conceptualization of Stochastic Data Infilling Process	
12.3.1 Basics of data gaps	
12.3.2 Group-based stochastic data infilling: problem definition	
12.4 Relevance of Artificial Neural Networks in Hydrologic Data Analysis	
12.4.1 Neural networks and hydrologic time series	
12.5 Development of Stochastic Data Infilling Models	
12.5.1 Multi-layer feed-forward autoregressive series model (M-ASM)	
12.5.2 Multi-layer feed-forward bivariate series model (M-BSM)	
12.6 Model Performance Indicators	
12.7 Evaluation Basis of Stochastic Data Infilling Models	
12.7.1 Comparison between MR- and ANN-based models	
12.7.2 Comparison between MR-based, PR-based, and ANN-based models	
12.8 Applications of Stochastic Data Infilling Models to Monthly Streamflows	
12.8.1 Selection of watersheds and preparation of streamflow data sets	
12.8.2 Seasonality and normality of streamflow data sets	
12.8.3 Performance assessment of stochastic data infilling models	
12.8.4 Comparison between ANN-, PR-, and MR-based models	
12.9 Conclusions and Recommendations	

13. SPATIAL ANALYSIS OF HYDROLOGIC AND ENVIRONMENTAL DATA BASED ON ARTIFICIAL NEURAL NETWORKS	259
<i>H.-S. Shin and J.D. Salas</i>	
13.1 Introduction	
13.1.1 General	
13.1.2 Traditional approaches and limitations	
13.1.3 Review of ANNs for spatial data analysis	
13.2 ANN Methods for Spatial Analysis	
13.2.1 Point estimator or interpolator	
13.2.2 Higher order moment estimators	
13.2.3 Posterior probability estimator and Bayesian classifier	
13.3 Spatial Analysis Neural Network (SANN)	
13.3.1 SANN structure	
13.3.2 Training, interpolation, and classification	
13.3.3 Elementary example of SANN: Walker lake data	
13.4 Spatial Analysis of Precipitation Based on SANN	
13.4.1 Introduction and data description	
13.4.2 Spatial analysis of precipitation	
13.5 Spatial Analysis of Groundwater Contamination	
13.5.1 Introduction and data description	
13.5.2 Identification of areas of groundwater contamination	
13.6 Final Remarks	
14. APPLICATION OF ARTIFICIAL NEURAL NETWORKS TO FORECASTING OF SURFACE WATER QUALITY VARIABLES: ISSUES, APPLICATIONS AND CHALLENGES	287
<i>H.R. Maier and G.C. Dandy</i>	
14.1 Water Quality Models in Context	
14.1.1 Process based models	
14.1.2 Statistical models	
14.1.3 Artificial neural network models	
14.2 Developing a Neural Network Model	
14.3 Data Pre-processing	
14.3.1 Range	
14.3.2 Normality	
14.3.3 Stationarity	
14.4 Determination of Model Input Parameters	
14.4.1 Determination of input variables	
14.4.2 Determination of input lags	
14.5 Applications	
14.5.1 Case studies: the river Murray	
14.5.2 Forecasting salinity concentrations at Murray bridge	
14.5.3 Forecasting blue-green algal concentration at Morgan	
14.6 Taking Stock: Past, Present and Future	
15. LONG RANGE PRECIPITATION PREDICTION IN CALIFORNIA; A LOOK INSIDE THE "BLACK BOX" OF A TRAINED NETWORK	311
<i>D. Silverman and J.A. Dracup</i>	
15.1 Introduction	
15.2 Backpropagation Networks	
15.3 Teleconnections	
15.4 Datasets	
15.4.1 ENSO	
15.4.2 700 mb height data	

- 15.5 Network Development
 - 15.5.1 Development of a predictive neural network
 - 15.5.2 Development of the networks for data extraction
- 15.6 Methods of Network Analysis-Opening the Black Box
 - 15.6.1 Variable removal
 - 15.6.2 Hinton diagrams
 - 15.6.3 Sensitivity analysis
 - 15.6.4 Stereotypical inputs (Masters, 1993)
- 15.7 Discussion
- 15.8 Further Reading

ACKNOWLEDGMENTS

A book of this nature is made feasible by timely contributions from the authors of various chapters. We want to thank them for their efforts, for promptly responding to our editorial comments and for adhering to the time constraints. Our corrections have been of a minor nature for the most part.

We have gone through all the chapters independently. Prof. Shafiqul Islam from the University of Cincinnati, assisted us with some of the review work. We thank our colleague, Prof. Dennis Lyn at Purdue University, for providing constructive criticism during the preparation of the book. Special thanks go to Ms. Dinah Hackerd for lending her secretarial skills to this project. She typed various portions of the book and helped us in putting all the chapters into a unified form.
