TABLE OF CONTENTS

FOREWORD.....	xi
ACKNOWLEDGEMENTS	xv
1. PLATONISM AND CAUSALITY	
1.1. Platonic objects.....	1
1.2. The causal objection.....	3
1.3. Benacerraf's argument	4
1.4. Reference and causality.....	6
1.5. Platonist responses	7
1.6. Further preliminaries	8
1.7. Outline of my project	9
2. BELIEFS AND FACTS	
2.1. What are beliefs?.....	11
2.2. Strong and weak causal theories.....	13
2.3. Belief eliminativism	14
2.4. Two traditional conditions for knowledge	15
2.5. An analysis of facts as causes	16
2.6. Facts and ontological commitment.....	18
2.7. Complex facts.....	21
3. BELIEFS AND CAUSES	
3.1. Free choice and causality	23
3.2. Can uncaused beliefs be knowledge?	25
3.3. An amendment to the causal condition.....	29
3.4. Non-causal criteria for knowledge.....	30
3.5. Non-causal epistemologies	32
3.6. Apsychologistic non-causal theories	33
3.7. Psychologistic non-causal epistemologies	34

4.	THE CASE FOR A CAUSAL CONNECTION	
4.1.	Defending the strong causal condition	36
4.2.	Disputing knowledge claims.....	36
4.3.	The Gettier problem	38
4.4.	Epistemic value	42
4.5.	The strong causal connection.....	44
4.6.	Avoiding foundational regress.....	46
4.7.	Paradigms of knowledge acquisition	47
4.8.	The causal connection is naturalistic	47
4.9.	The insufficiency of a minimalist causal theory	49
4.10.	The virtues of the causal condition.....	52
5.	IS A CAUSAL CONNECTION NECESSARY FOR KNOWLEDGE?	
5.1.	Objections to the causal condition.....	54
5.2.	Perceptual knowledge	55
5.3.	Inferential knowledge.....	56
5.4.	General knowledge.....	57
5.5.	k-causal connection	59
5.6.	Knowledge of universal facts.....	67
5.7.	The beheading counterexample	72
5.8.	Non-causal correlates	74
5.9.	Knowledge of non-local quantum facts.....	76
5.10.	The <i>tu quoque</i> objection.....	78
5.11.	The condition of the causal condition.....	79
6.	OTHER THEORIES OF KNOWLEDGE	
6.1.	Connectionist conditions on knowledge.....	80
6.2.	The truth-tracking connection.....	80
6.3.	Truth-tracking and platonic objects	83
6.4.	The law-like connection.....	85
6.5.	Law-like connection and platonic objects	87
6.6.	The explanatory connection.....	88
6.7.	Explanation and platonic objects	90
6.8.	The nondefeasibility condition	92
6.9.	Nondefeasibility and platonic objects.....	93
6.10.	Connectionist accounts and platonic knowledge	93

7.	EXISTENCE CLAIMS AND CAUSALITY	
7.1.	Existential platonic knowledge	94
7.2.	Hale's argument	94
7.3.	Causal constraints on existential knowledge.....	95
7.4.	Aboutness and existence	96
7.5.	The 'non-existential' tradition	97
7.6.	Defending the existential causal condition.....	99
7.7.	The case for an existential causal condition.....	99
7.8.	Hale's response.....	103
7.9.	The necessary existence of platonic objects.....	105
7.10.	Counterexamples to the existential causal condition	109
7.11.	Further objections.....	113
7.12.	Defending the eleatic principle	114
7.13.	Non-natural science and the causal condition	121
8.	THE BURDEN OF PROOF	
8.1.	Platonism's burden of proof.....	123
8.2.	Reliabilism and platonism.....	126
9.	PLATONIC KNOWLEDGE BY INTUITION	
9.1.	Varieties of intuition.....	131
9.2.	Inferential intuition.....	133
9.3.	ESP intuition.....	133
9.4.	Perceptual intuition	134
9.5.	Cognitive intuition.....	136
9.6.	Direct platonic intuition	137
10.	APRIORISM	
10.1.	<i>A priori</i> platonic knowledge	145
10.2.	Platonic knowledge as conceptual knowledge	145
10.3.	Realistic rationalism	149
10.4.	Apriority and necessity	153
11.	INDISPENSABILITY AND PLATONIC KNOWLEDGE	
11.1.	Postulation and indispensability	156
11.2.	Field's project.....	158
11.3.	Revisionist mathematics.....	160
11.4.	Variable ontological commitment	161
11.5.	Indispensability and causality	165
11.6.	A challenge to platonists	168

12. PROBLEMS WITH PROLIFIGATE PLATONISM	
12.1. Full-blooded platonism	172
12.2. The epistemology and semantics of FBP	173
12.3. Problems with reference for FBP.....	177
12.4. Anaemic platonism.....	183
12.5. True belief without knowledge	186
12.6. Platonised naturalism and principled platonism.....	187
12.7. Referring to the objects of PP	190
12.8. Knowledge of the PP principles.....	192
CONCLUSION	194
APPENDICES	
I. DOES KNOWLEDGE REQUIRE BELIEF?	
I.1. The traditional analysis of knowledge.....	196
I.2. The truth condition.....	196
I.3. The consistency of belief and knowledge	197
I.4. Radford's counterexample	198
I.5. Information and knowledge	201
II. CAN WE CHOOSE OUR BELIEFS?	
II.1. Belief-voluntarism and epistemic justification.....	203
II.2. Belief-voluntarism — is it possible?	203
II.3. Direct belief-voluntarism — is it actual?	207
II.4. Belief and acceptance.....	211
II.5. Choosing beliefs indirectly	213
BIBLIOGRAPHY	219
INDEX	231

FOREWORD

The main purpose of this book is to argue against the claim that abstract entities exist, where abstract entities are entities that lack causal powers and are not located anywhere in space and time. My particular target is mathematical platonism. Mathematical platonism is the view that the subject matter of pure mathematics is abstract mathematical objects. Accordingly, mathematical platonism incorporates the view that our mathematical knowledge includes knowledge of the existence and properties of abstract or platonic objects. In outline, my argument against mathematical platonism is that, since it is in virtue of their causal powers that we come to know of the existence of any entity, we cannot know of the existence of causally impotent objects and, accordingly, we ought not to believe that such objects exist. It follows that we ought not to believe mathematical platonism and the same applies to any other platonist theory that appeals to the existence of abstract objects.

I have a number of aims for my project. My overall aim is to present the strongest causalist case that I can against platonism. Although anti-platonists often appeal to causal objections, few detailed accounts of such objections have been made out. So realising this aim will, at the very least, fill a gap in the literature on epistemology and the philosophy of mathematics.

A number of platonists have argued that any account of knowledge that is strong enough to rule out knowledge of abstract objects will be too strong, in that it will also rule out knowledge that we clearly have. So one of my aims is to present an account of knowledge that avoids this criticism. I offer a necessary condition for knowledge that does not allow platonic knowledge but does not disallow any of the uncontroversial examples of knowledge that defenders of platonism have raised. Now a constraint on knowledge that simply deals with these purported counterexamples may be quite implausible or *ad hoc*. However, I also hope to convince the reader that my account of knowledge is plausible and, indeed, that it is superior to other competitors.

Note that what is crucially at issue is our knowledge of the *existence* of certain entities. The fact that the relevant causal constraint need only apply to existential knowledge has often been overlooked. So I argue for a plausible constraint on our existential knowledge, one that rules out our having knowledge of the existence of platonic objects without ruling out our ability to know of the existence of other, less controversial, entities.

Even if I do not succeed in convincing the reader of the merits of my causal constraint on existential knowledge, there is a further plank in my case against platonism. Platonists owe us an account of how it is that we have mathematical knowledge, supposing that knowledge to be platonic knowledge. In the latter part of the book (Chapters 8-12) I examine several accounts of platonic knowledge and conclude that none is satisfactory.

If platonism is to be discarded, then the question arises as to what should take its place. If not abstract objects, then what is the subject matter of mathematics and the other discourses that have been given platonistic analyses? Answering this question is not one of the aims of this book. Here I simply observe that most arguments for platonism are fundamentally linguistic. They take the nature and structure of our mathematical (or some other) language to be a guide to the nature and structure of mathematical (or some other) reality. This, in itself, may be no bad thing. But we need to be cautious, lest we get the linguistic cart before the metaphysical horse. After all, we can speak of the very same fact by employing different items of language with entirely different structures. Which structure is to have priority? When problems arise, such as the epistemological problems discussed in this volume, we need to look beyond our language to the world itself, especially to our mathematical (or other) practices and to the ways in which we use our language.

My project is epistemological. The enterprise that epistemologists are engaged in is (or ought to be) directed fundamentally at answering the questions, ‘What can we know?’ and ‘What ought we to believe?’ My modest project contributes to this greater enterprise by concluding that we cannot know of the existence of abstract objects and that we ought not to believe that such objects exist. In his autobiography, John Stuart Mill wrote:

The notion that truths external to the human mind may be known by intuition or consciousness, independently of observation and experience, is, I am persuaded, in these times, the great intellectual support of false doctrines and bad institutions... There never was a such an instrument devised for consecrating all deep-seated prejudices. (Mill 1873/1992, p. 123)

Insofar as Mill refers to truths with existential import, I support his sentiment. Mill has in mind the pernicious effects of this ‘false philosophy in

morals, politics, and religion' (*ibid*). Confined to pure mathematics and the like, it may be a harmless curiosity. Nevertheless, by repudiating mathematical platonism, I believe we move the epistemological enterprise in a direction that has the beneficial effect of undermining other ill-founded and more damaging doctrines.

ACKNOWLEDGEMENTS

This book has its origins in an undergraduate essay that I wrote for a course on the philosophy of mathematics. The topic of that essay was broadened to become the topic of my PhD thesis (Cheyne 1994). In turn my thesis was developed to provide the basis of this book. The lecturer who sparked my initial interest, the supervisor who sustained and nourished that interest, and the head of department who ensured a research environment in which this book might come to fruition was, in all cases, Alan Musgrave. I am deeply indebted to Alan for his enthusiasm, encouragement, and invaluable assistance. Any reader should also be grateful to Alan. By rescuing me from countless stylistic infelicities, he has made reading the book a less unpleasant task than it would otherwise be. Any mistakes that remain are, of course, my own bloody fault.

It has been my good fortune to profit from the example and support of my colleagues, past and present, in the Department of Philosophy at the University of Otago. I am particularly grateful for numerous discussions with Charles Pigden and the inspiring example of the late Pavel Tichy'. I also acknowledge and express my thanks for the help and suggestions of Mark Balaguer, JC Beall, John Bigelow, John Bishop, Phillip Catton, Mark Colyvan, Peter Entwisle, Hartry Field, Alvin Goldman, Paul Griffiths, Bernard Linsky, Robert Thomas, and Ed Zalta. I should like to mention two books that were particularly influential, especially in the early stages: Andrew Irvine's edited volume for this series *Physicalism in Mathematics* and Hartry Field's *Realism, Mathematics and Modality*.

I am grateful for the encouragement and assistance of the series editor, Bill Demopoulos, and of Kluwer's editorial staff, Rudolf Rijgersberg and Jolanda Voogd. A special thank you to David Talbot for his advice and help with research and computing, and to Penny Bond and Sally Holloway for their invaluable clerical services.

My heartfelt gratitude to Elizabeth for her support and encouragement, when even grudging tolerance is more than one should expect for such an unwarranted intrusion into a marriage relationship, and to Casimir, Bijou, and Tybalt for their important contribution to the maintenance of my sanity.

The preparation of the manuscript was partly funded by a research grant from the Division of Humanities, University of Otago, for which I gratefully acknowledge receipt.

In places I draw on and incorporate material from previously published articles. I thank the following publishers for their permission to reproduce material from those articles: Núcleo de Epistemologica e Logica for Cheyne 1997a, the International Phenomenological Society for Cheyne 1997b, the Australasian Association of Philosophy and Oxford University Press for Cheyne 1998 and Cheyne & Pigden 1996, the International Phenomenological Society for Cheyne 1997b, and R.S.D. Thomas and the Canadian Society for History and Philosophy of Mathematics for Cheyne 1999.
