# ACKNOWLEDGEMENT

I would like to acknowledge Jean Paelinck. Since I met him in Madrid fifteen years ago, he has been a friendly stimulus for my research.

It is impossible to express sufficient gratitude to M<sup>a</sup> Teresa Aparicio, Alfonso Novales and Javier Trívez for reading through and commenting on various drafts of the manuscript. Without their help the writing of this book would not have been possible.

I also want to express my gratitude to Fernando Sanz who read the entire manuscript and made many useful suggestions and to José Albiac, Anil Bera, Inmaculada Galastegui, Antonio García-Ferrer, Jesús Mur, Rafael Rubio and José M<sup>a</sup> Usategui who provided useful comments on some chapters. I am grateful to an anonymous referee for several useful comments. J. Pierre Ancot has provided continuous encouragement to finish and publish this book.

High on my list of people to thank is Angel Alcaide who first taught me econometrics.

I acknowledge my great debt to Lola Pereda and Stephen Wilkins who helped me to improve my own English and to Ascensión Aranda, Carlos Lafnez and Teresa Ortas for their expert typing.

The research reported in the last part of the book was supported by grant Number B-339185 from the CAYCIT for which I am grateful.

Of course, I assume the responsibility for those errors that might still remain somewhere in the book.

# TABLE OF CONTENTS

<b>Introduction</b>	<b>1</b>
<b>Chapter 1. Economic Methodology and Econometrics</b>	<b>5</b>
1.1. Concept of Science	5
1.2. Economics as an Empirical Science	18
1.2.1. Natural versus Social Sciences	18
1.2.2. Economics as a Social Science	20
1.2.3. The Positivist Tradition in Economics	23
<b>Chapter 2. Statistical Decision Theory</b>	<b>29</b>
2.1. Basic Elements and Definitions of Statistical Decision Theory	29
2.2. Decision Criteria	32
2.3. Testing Hypotheses and Decision Theory	41
<b>Chapter 3. Econometric Model Selection Procedures: A Survey</b>	<b>57</b>
3.1. Foundations	57
3.1.1. Parametric and Non-Parametric Methods	61
3.1.2. Nested and Non-Nested Hypotheses	61
3.1.3. Testing of the Random Disturbance Properties	62
3.1.4. Specifications Error	63
3.1.5. Posterior Probabilities Ratio	67
3.1.6. Information Criterion	69
3.2. Parametric Methods	72
3.2.1. Classical Tests: $t$ and $F$	73
3.2.2. Likelihood Ratio, Wald and Lagrange Tests	75
3.3. Non-Parametric Methods	81
3.4. Non-Nested Hypotheses	85

<b>Chapter 4. Set of Spherical Models</b>	<b>93</b>
4.1. Residuals	94
4.1.1. OLS Residuals	94
4.1.2. Residuals with a given Covariance Matrix, $\Omega$ , fixed a priori	96
4.1.3. BLUS and Recursive Residuals	100
4.2. Autocorrelation Test	107
4.2.1. Durbin-Watson, Berenblut-Webb and King Tests	108
4.2.2. Test based on Residuals with a Covariance Matrix fixed a priori which does not depend on the Regressors	113
4.2.3. Other Autocorrelation Tests	115
4.3. Tests of Exogeneity	119
<b>Chapter 5. Set of More Informative Models</b>	<b>125</b>
5.1. Information and Decision	125
5.1.1. Criteria $A_p$ , $C_p$ , FPE and PC	128
5.1.2. Criteria BIC and AIC	132
5.1.3. Other Criteria: Theil, Schwarz, Hannan-Quinn, Atkinson Geweke-Meese and Terasvirta-Mellin	133
5.2. Bayes Criteria	137
5.3. Relationship between the Information Criteria and the $F$ -test	145
5.4. Asymptotic Treatment	148
<b>Chapter 6. AVE and Acord Criteria. A New Proposal</b>	<b>155</b>
6.1. Definition of the AVE Criterion	156
6.1.1. The AVE Criterion and Prediction	156
6.1.2. The AVE Criterion and the Estimation of a Single Parameter	157
6.1.3. The AVE Criterion and the Estimation of a Set of Parameters	158
6.1.4. The AVE Criterion and the Estimation of a Linear Combination of Parameters	161
6.2. The AVE Criterion and the $F$ -test	162
6.3. Asymptotic Treatment of the AVE Criterion	168
6.4. Empirical Content and Demands Made of a Model: Acceptable Error Size and Guarantee Significance Level	171
6.5. Corroboration. The ACOR Criterion	175
6.6. A New Model Selection Procedure	178

<b>Chapter 7. Dynamic Models–1</b>	<b>181</b>
7.1. Econometric Models and Time Series Models	181
7.1.1. Multi-equational Models	182
7.1.2. Uni-equational Models	184
7.1.3. Information Content and Uses of the Different Alternative Specifications	190
7.2. Causality and Exogeneity	194
7.3. Dynamic Models and Autocorrelation	209
<b>Chapter 8. Dynamic Models–2</b>	<b>217</b>
8.1. Specification of Dynamic Models	217
8.1.1. Statistics	217
8.1.2. Differencing and Prewhitening	222
8.1.3. Methods to Select Dynamic Econometric Models	228
8.2. New Proposal to Select Dynamic Models	234
8.2.1. Information and Alternative Specifications	234
8.2.2. Set of Spherical Models	236
8.2.3. Set of Informative Models	236
8.2.4. Corroboration	241
<b>References</b>	<b>245</b>
