THE PHYLOGENETIC CLASSIFICATION OF DIPTERA CYCLORRHAPHA

with special reference to the structure
of the male postabdomen

by

G. C. D. GRIFFITHS

Springer-Science+Business Media, B.V.

CONTENTS

1. Introduction	2
2. Principles and procedures of classification	
2.1. The representation of phylogenetic relationship in the Linnaean hierarchy	5
2.2. The comparative merits of phylogenetic systematics and other approaches to the classification of organisms	11
2.3. Procedures of phylogenetic analysis	20
3. Structure of the male postabdomen	
3.1. Preliminary treatment and explanation of terminology	29
3.2. The ' <i>hypopygium circumversum</i> ' condition	40
4. The relationship of the Cyclorrhapha to other Eremoneura	58
5. The major subordinate groups of the Cyclorrhapha	67
6. Review of the classification of the Schizophora	
6.1. Preliminary remarks	75
6.2. Treatment of subordinate groups to the family level	84
6.3. Key to the families of Schizophora	264
7. Check-list of revised family classification of the Cyclorrhapha	314
8. Concluding remarks	317
9. Acknowledgements	318
10. Summary: Résumé: Zusammenfassung	319
11. References	322
Abbreviations used on plates and figures	333
Indices	335
 Plate I. <i>Plesioclythia agarici</i> (WILLARD) (Platypezidae), postabdomen in dorsal view of newly emerged male, showing a <i>hypopygium inversum</i> condition	43
Plate II. <i>Plesioclythia agarici</i> (WILLARD), postabdomen in ventral view of newly emerged male (the same individual as shown in Plate I).	44
