Preface

It was a pleasure and an honor to have organized the 11th Conference on Image and Graphics Technologies and Applications. The conference was held during July 8–9, 2016, in Beijing, China. The conference series is the premier forum for presenting research in image processing and graphics and their related topics. The conference provides a rich forum for sharing the progress in the areas of image processing technology, image analysis and understanding, computer vision and pattern recognition, big data mining, computer graphics and VR, image technology application, with the generation of new ideas, new approaches, new techniques, new applications, and new evaluations. The conference is organized under the auspices of the Beijing Society of Image and Graphics, in Peking University, Beijing, China.

The conference program includes keynotes, oral papers, posters, demos, and exhibitions. For this year's conference, we received 138 papers for review. Each of these was assessed by at least two reviewers, with some of the papers being assessed by three reviewers; finally, 27 submissions were selected for oral and poster presentation.

We are grateful for the effort of everyone who helped to make this conference a reality. We thank all the reviewers for completing the reviewing process on time. The local host, Peking University, facilitated many of the local arrangements for the conference and provided a warm welcome to all of the delegates.

The conference continues to be a leading forum for cutting-edge research and case study in image and graphics. We hope you enjoy reading these proceedings.
