Looking at the issues of water governance through the perspective of the social sciences, books in the Palgrave Series in Water Governance take a global perspective on one of the key challenges facing society today: the sustainable development of water resources and services for all. In stepping away from the traditional focus on engineering and geophysics, the series takes a more holistic approach to both consolidate and generate knowledge that can be applied to different geographic areas by academics, researchers, policy-makers, NGOs and the private sector. This series emphasises the link between science and policy through considering water as a socio-ecological system, water and the territoriality of action, and water in the context of conflicts.

Notes on Contributors

Jaime Melo Baptista is principal researcher at the National Laboratory of Civil Engineering (LNEC) in Portugal. He is a project leader at the Lisbon International Centre for Water (LIS-Water). His expertise lies in water supply and wastewater services—in relation to public policies, governance, regulation, quality of service, and performance assessment. He has served as the head of the Hydraulics Department (1990–2000) and the Sanitary Hydraulics Division (1984–1989) of LNEC. He was a member of the board of directors of the International Water Association (IWA) from 2012 to 2016. He was the chairperson of the Portuguese Water and Waste Services Regulatory Authority (ERSAR) from 2003 to 2015, regulating 500 utilities.

Lorenzo Bardelli is director of the Water Systems Directorate of the Italian Regulatory Authority for Energy, Networks and Environment (ARERA) and Adjunct Professor of Regulatory Economics at the University of Milan. Before joining ARERA in 2012, Lorenzo was director of the Utilitatis Foundation, whose aim is the promotion of researches and studies in public utilities sectors, and a member of organizations focused on services of general interests and on the form of public interventions in the economy (CEEP, CEDEC, CIRIEC, Federutility, Federambiente, Confservizi, Fonservizi). His interests include design of allocative mechanisms for efficiency and equity improvement in public utilities.

Salvador Bertoméu-Sánchez is a PhD candidate at the European Center for Advanced Research in Economics and Statistics (ECARES), Université libre de

Bruxelles, Belgium. He graduated as an economist from the Solvay Brussels School of Economics and Management (ULB). His fields of research are public economics, especially public infrastructure services and their regulation, and political economy. He has worked as an external consultant for the World Bank and the Inter-American Development Bank (IDB) on projects related to the water and sanitation sectors and their regulation in developing countries. He has published scientific articles in *Transport Policy* and *Utilities Policy* academic journals.

Astrid Cullmann is a senior researcher at the German Institute for Economic Research (DIW Berlin) and a senior lecturer in the Department of Econometrics and Statistics, Faculty of Economics and Management at Technische Universität Berlin. Her current research focuses on public service provision in sectors of general interest, innovation economics, advanced structural production function models, and a variety of econometric techniques.

Antonio Estache is Professor of Economics at the Université libre de Bruxelles, Belgium, and a member of ECARES in Brussels. He also advises governments and international organizations on infrastructure regulation, privatization, environmental regulation, public sector management, and tax reforms. His work in these fields has been published extensively, including in the *Journal of Public Economics*, *Journal of Regulatory Economics*, *Journal of Development Economics*, *Journal of Economic Literature*, *World Development*, and *World Bank Economic Review*.

María A. García-Valiñas is an associate professor (tenured) at the University of Oviedo, Spain. She is a member of the *Oviedo Efficiency Group* (Department of Economics). Her main research interests are in the fields of public economics and water economics. She has collaborated with several public institutions, such as the Spanish Ministry of Environmental Issues and the River Basin Authorities, in order to implement the economic analysis required by the EU Water Framework Directive (WFD). Moreover, she has assessed water demand, pricing, and regulatory issues. Her work has appeared in peer-reviewed journals (more than 35 papers) and prestigious editorials (9 book chapters).

Olivia Jensen is a political economist specializing in water and international development. Since 2014, she has been a senior research fellow at the Institute of Water Policy, Lee Kuan Yew School of Public Policy, National University of Singapore. The focus of her research is urban water governance and regulation. She has experience in consultancy and media as well as in academia and has led projects for public and private clients including the World Bank and the

European Commission. She has lived and worked throughout Asia, including in China, Japan, and India.

Michael Klien is a researcher at the Austrian Institute of Economic Research (WIFO). His research centers on the organization and performance of public services, ranging from organizational studies to political economy. In addition to a number of scientific publications in peer-reviewed international journals, Michael has provided consultation in a range of related areas—to, for example, World Bank and OECD. He has worked extensively in the area of water services with a focus on utility performance, efficiency measurement, and utility aggregations.

Emanuele Lobina is a principal lecturer with the Public Services International Research Unit (PSIRU), Business Faculty, University of Greenwich, United Kingdom. Emanuele joined PSIRU in 1998 to further their research and policy work on water service reform and has written extensively on the topic. Taking the urban water sector in developed, transition, and developing countries as reference, his research revolves around the relative efficiency of public and private enterprise, and the policy process as networked governance. From September 2017 to August 2018, Emanuele was an ISRF (Independent Social Research Foundation) Political Economy Research Fellow (<http://www.isrf.org/about/fellows-and-projects/emanuele-lobina>).

A. Wren Montgomery is an assistant professor at the Ivey Business School, Western University, Canada, and a visiting research scholar at the University of Michigan's Erb Institute for Business Sustainability (United States). Montgomery's research focuses on emerging pressures on water resources and institutions including tensions over ownership, corporate water management, and access and affordability challenges. She also studies environmental entrepreneurship, cross-sectoral collaboration, and corporate greenwashing. Prior to academia, she worked as a government relations and management consultant as well as a policy analyst at senior levels of government.

Simon Porcher is Associate Professor of Management and vice-director of the Economics of Public-Private Partnerships Chair at Sorbonne Business School, IAE Paris, Université Paris 1 Panthéon-Sorbonne, France. He was a fellow, lecturer, and then visiting lecturer (2014–2017) at the London School of Economics; an invited professor at the Institute of Water Policy of the Lee Kuan Yew School of Public Policy, National University of Singapore (2018); and a

Robert Schuman Fellow (2013) at the European University Institute. He holds a PhD from the Sorbonne Business School and graduated from the Paris School of Economics and Sciences Po. During his PhD, he has specialized in the study of privatization of water public services in France and has then extended his research to other countries including the United Kingdom and Chile and has ongoing works on China, Germany, the Netherlands, and Portugal. His research has been published in the *Journal of Public Administration Research and Theory*, *Energy Economics*, and the *Journal of Cleaner Production*, among others. He is an associate editor of *M@n@gement*, the French top management journal.

Julia Rechlitz is a researcher in the Department of Energy, Transportation, Environment at DIW Berlin. Her research focuses on applied microeconomics and energy and water economics.

Maria Salvetti is an independent consultant who has worked for the World Bank at several occasions since 2014. She also collaborates with the Economics of Public-Private Partnerships research chair at the Sorbonne Business School since 2013. Within the framework of H2020 program, she presently coordinates, for the Sorbonne Business School and with Portuguese and English partners, the implementation of an international center of excellence on water based in Lisbon. As the former chief economist for the French National Agency for Water and Aquatic Environments (Onema), Salvetti produced the first report on water services performance which was presented during the World Water Forum in 2012. She has also worked on several environmental and socio-economic studies required by the European WFD. From 2008 to 2010, she worked for the largest water service in Europe (SEDIF) providing economic and financial advice in the preparation of the service management contract. She has also worked as a principal economist for Seine Normandy Water Agency (France) and the Environment Agency (England and Wales).

Stéphane Saussier is Professor of Economics and Management at the Sorbonne Business School, France, where he is running a research group working on the Economics of Public-Private Partnerships. He is also director of the water research area at the Florence School of Regulation, Italy. Specializing in issues of water governance and public-private partnerships (PPPs), he regularly contributes to reports for international institutions such as the OECD and the European Parliament. His work has been widely published (more than 60 articles and book chapters)—many in international journals.

Tomás Serebrisky is the principal economic advisor of the Infrastructure Department of the IDB. Prior to joining the IDB, Serebrisky was the chief economist of the Antitrust Commission in Argentina, a visiting professor at Universidad Torcuato Di Tella, and a senior economist in the World Bank. His areas of expertise are the economics of infrastructure investment, PPPs, economic regulation, and antitrust. His work has been published extensively in refereed journals. He is the author of the book *Airport Economics in Latin America: Benchmarking, Regulation and Pricing*. He holds a PhD in Economics from the University of Chicago and a BA in Economics from Universidad de San Andres.

Caroline Stiel is a researcher at DIW Berlin. Her research focuses on firm performance and innovation, with a particular emphasis on the role of firms' organizational structures. She has conducted several empirical studies on firm behavior in the German energy and water sector.

Takuya Urakami is a professor at the Faculty of Business Administration, Kindai University, Osaka, Japan. His main areas of research interest are performance measurement in water and sewerage utilities as well as optimal industry structure of these sectors. He has served as council committee member of the central and local governments in the field of water supply and sewerage.

Paola Valbonesi is a Professor of Economics at the University of Padova and a research professor at the Higher School of Economics, National Research University, Russian Federation. She obtained her Laurea in Political Science at the University of Padova and MA and PhD in Economics at the European University Institute (EUI), Florence. Her main research interests focus on the design of efficient rules and economic incentives, primarily where government intervention plays a role. She has investigated the design of regulated sectors (energy, water, tlc, motorway, university), procurement contracts, and auction formats; and the effects of state aids to business and to foster innovation.

Dan Zhao is a PhD candidate in Business Economics at the Ross School of Business, University of Michigan, Ann Arbor, United States. Zhao's research on water focuses on topics related to the quality of drinking water in the United States. In particular, he has studied how an amalgam of factors including different paradigms of interaction between government regulators and water systems, governance forms of water systems, and pressure from local stakeholders work together to shape the behavior of a water system and its regulator. He also studies the drivers of corporate social responsibility.
